Calling within the United States (800) 457-7777
Calling from outside the United States (949) 859-4273

For more information, see “If Something Goes Wrong” on [page 206](#) in this guide.

⚠ WARNING

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. ***Wash hands after handling.***

Model: Portégé® R200/R205 Series

Recordable and/or ReWritable Drive(s) and Associated Software Warranty

The computer system you purchased may include Recordable and/or ReWritable optical media drive(s) and associated software, among the most advanced data storage technologies available. As with any new technology, you must read and follow all set-up and usage instructions in the applicable user guides and/or manuals enclosed or provided electronically. If you fail to do so, this product may not function properly and you may lose data or suffer other damage. TOSHIBA AMERICA INFORMATION SYSTEMS, INC. ("TOSHIBA"), ITS AFFILIATES AND SUPPLIERS DO NOT WARRANT THAT OPERATION OF THE PRODUCT WILL BE UNINTERRUPTED OR ERROR FREE. YOU AGREE THAT TOSHIBA, ITS AFFILIATES AND SUPPLIERS SHALL HAVE NO RESPONSIBILITY FOR DAMAGE TO OR LOSS OF ANY BUSINESS, PROFITS, PROGRAMS, DATA, NETWORK SYSTEMS OR REMOVABLE STORAGE MEDIA ARISING OUT OF OR RESULTING FROM THE USE OF THE PRODUCT, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

Protection of Stored Data

For your important data, please make periodic back-up copies of all the data stored on the hard disk or other storage devices as a precaution against possible failures, alteration, or loss of the data. **IF YOUR DATA IS ALTERED OR LOST DUE TO ANY TROUBLE, FAILURE OR MALFUNCTION OF THE HARD DISK DRIVE OR OTHER STORAGE DEVICES AND THE DATA CANNOT BE RECOVERED, TOSHIBA SHALL NOT BE LIABLE FOR ANY DAMAGE OR LOSS OF DATA, OR ANY OTHER DAMAGE RESULTING THEREFROM. WHEN COPYING OR TRANSFERRING YOUR DATA, PLEASE BE SURE TO CONFIRM WHETHER THE DATA HAS BEEN SUCCESSFULLY COPIED OR TRANSFERRED. TOSHIBA DISCLAIMS ANY LIABILITY FOR THE FAILURE TO COPY OR TRANSFER THE DATA CORRECTLY.**

Critical Applications

The computer you have purchased is not designed for any “critical applications.” “Critical applications” means life support systems, medical applications, connections to implanted medical devices, commercial transportation, nuclear facilities or systems or any other applications where product failure could lead to injury to persons or loss of life or catastrophic property damage.

ACCORDINGLY, TOSHIBA, ITS AFFILIATES AND SUPPLIERS DISCLAIM ANY AND ALL LIABILITY ARISING OUT OF THE USE OF THE COMPUTER PRODUCTS IN ANY CRITICAL APPLICATIONS. IF YOU USE THE COMPUTER PRODUCTS IN A CRITICAL APPLICATION, YOU, AND NOT TOSHIBA, ASSUME FULL RESPONSIBILITY FOR SUCH USE.

FCC Notice “Declaration of Conformity Information”

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the separation between the equipment and receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

NOTE

Only Peripherals complying with the FCC Class B limits may be attached to this equipment. Operation with noncompliant peripherals or peripherals not recommended by Toshiba is likely to result in interference to radio and TV reception. Shielded cables must be used between the external devices and the computer's parallel port, monitor port, USB port, PS/2 port®, i.LINK® port and microphone jack. Changes or modifications made to this equipment not expressly approved by Toshiba or parties authorized by Toshiba could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

Contact either:

- ❖ Toshiba's Support Website at pcsupport.toshiba.com.
- ❖ Or call the Toshiba Global Support Centre:

Within the United States at (800) 457-7777

Outside the United States at (949) 859-4273

Industry Canada requirement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

FCC requirements

The following information is pursuant to FCC CFR 47, Part 68 and refers to internal modems.

This equipment complies with Part 68 of the FCC rules. On the bottom of this equipment is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN) for this equipment. If requested, the information must be provided to the telephone company.

The modem connects to the telephone line by means of a standard jack called the USOC RJ11C.

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC part 68 rules and requirements adopted by the ACTA. It is designed to be connected to a compatible modular jack that is also compliant.

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for this product is part of the product identifier that has the format US:AAAEQ##TXXXX. The digits represented by the ## are the REN without a

decimal point (e.g., 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

Telephone Company Procedures

The goal of the telephone company is to provide you with the best service it can. In order to do this, it may occasionally be necessary for them to make changes in their equipment, operations or procedures. If these changes might affect your service or the operation of your equipment, the telephone company will give you notice, in writing, to allow you to make any changes necessary to maintain uninterrupted service.

If Problems Arise

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advanced notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

If trouble is experienced with this equipment, for repair or limited warranty information, please contact Toshiba Corporation, Toshiba America Information Systems, Inc. or an authorized representative of Toshiba, or the Toshiba Support Centre within the United States at (800) 457-7777 or Outside the United States at (949) 859-4273. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

Disconnection

If you should ever decide to permanently disconnect your modem from its present line, please call the telephone company and let them know of this change.

Fax Branding

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device, including Fax machines, to send any message unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the telephone number of the sending machine or such business, other entity, or individual. (The telephone number

provided may not be a 900 number or any other number for which charges exceed local or long-distance transmission charges.)

In order to program this information into your fax transmission, refer to the fax software instructions installed on this computer.

Alarm Equipment

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

Instructions for IC CS-03 Certified Equipment

- 1 **NOTICE:** The Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational and safety requirements as prescribed in the appropriate Terminal Equipment Technical Requirements document(s). The Department does not guarantee the equipment will operate to the user's satisfaction.

Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be coordinated by a representative designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

Caution: Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

- 2 The user manual of analog equipment must contain the equipment's Ringer Equivalence Number (REN) and an explanation notice similar to the following:

The Ringer Equivalence Number (REN) of this device can be found on the label affixed to your computer.

NOTICE: The Ringer Equivalence Number (REN) assigned to each terminal device provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed 5.

- 3 The standard connecting arrangement (telephone jack type) for this equipment is jack type(s): USOC RJ11C.

Wireless Interoperability

The TOSHIBA Wireless LAN Mini PCI Card products are designed to be interoperable with any wireless LAN product that is based on Direct Sequence Spread Spectrum (DSSS) radio technology, and is compliant to:

- ❖ The IEEE 802.11 Standard on Wireless LANs (Revision A/B/G), as defined and approved by the Institute of Electrical and Electronics Engineers.
- ❖ The Wireless Fidelity (Wi-Fi) certification as defined by the Wi-Fi Alliance. The “Wi-Fi CERTIFIED” logo is a certification mark of the Wi-Fi Alliance.

CAUTION

Bluetooth® and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use *Bluetooth* and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection.

If you should experience any such problem, immediately turn off your *Bluetooth* or Wireless LAN device.

Please contact Toshiba PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or pcsupport.toshiba.com in the United States for more information.

CAUTION

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.25 GHz frequency range.

Wireless LAN and your Health

Wireless LAN products, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by Wireless LAN devices however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because Wireless LAN products operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Wireless LAN is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of Wireless LAN may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the Wireless LAN equipment on board airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the Wireless LAN device prior to turning on the equipment.

Regulatory Information

The TOSHIBA Wireless LAN Mini PCI Card must be installed and used in strict accordance with the manufacturer's instructions as described in the user documentation that comes with the product. This device complies with the following radio frequency and safety standards.

Canada – Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

CAUTION

The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada's Web site www.hc-sc.gc.ca/rpb. The RF device shall not be co-located with any other transmitter that has not been tested with this device.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term "IC" before the equipment certification number only signifies that the Industry Canada technical specifications were met.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

Pour empêcher que cet appareil cause du brouillage au service faisant l'objet d'une licence, il doit être utilisé à l'intérieur et devrait être placé loin des fenêtres afin de fournir un écran de blindage maximal. Si le matériel (ou son antenne d'émission) est installé à l'extérieur, il doit faire l'objet d'une licence.

CAUTION

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.25 GHz frequency range. Industry Canada requires this product to be used indoors for frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

High power radars are allocated as primary users of the 5.25 GHz to 5.35 GHz and 5.65 GHz to 5.85 GHz bands. These radar stations can cause interference with and/or damage this device.

Europe – EU Declaration of Conformity

- ❖ This device complies with the essential requirements of the R&TTE Directive 1999/5/EC with essential test suites as per standards:
 - EN 60950 Safety of Information Technology equipment.
 - ETS 300 328 Technical requirements for radio equipment.
 - ETS 300 826 General EMC requirements for radio equipment.

English:	Hereby, TOSHIBA Corp. Digital Media Network Company, declares that this Radio LAN device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.
----------	---

Spanish:	Por medio de la presente TOSHIBA Corp. Digital Media Network Company declara que el Radio LAN device cumple con los requisitos esenciales y cualesquiera otras disposiciones aplicables o exigibles de la Directiva 1999/5/CE.
Portuguese:	TOSHIBA Corp. Digital Media Network Company declara que este Radio LAN device está conforme com os requisitos essenciais e outras disposições da Directiva 1999/5/CE.

USA – Federal Communications Commission (FCC)

This device complies with Part 15 of FCC Rules. Operation of the devices in a Wireless LAN System is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference that may cause undesired operation.

TOSHIBA is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this TOSHIBA Wireless LAN Mini PCI Card, or the substitution or attachment of connecting cables and equipment other than specified by TOSHIBA.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

CAUTION

Exposure to Radio Frequency Radiation

The radiated output power of the TOSHIBA Wireless LAN Mini PCI Card is far below the FCC radio frequency exposure limits. Nevertheless, the TOSHIBA Wireless LAN Mini PCI Card shall be used in such a manner that the potential for human contact during normal operation is minimized. In normal operating configuration, the LCD in the upright position, the distance between the antenna and the user should not be less than 20 cm. The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. Antenna(s) used in 5.15 GHz to 5.25 GHz frequency band must be integral antenna which provide no access to the end user.

Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information.

CAUTION

Radio Frequency Interference Requirements

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.25 GHz frequency range. FCC requires this product to be used indoors for frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

High power radars are allocated as primary users of the 5.25 GHz to 5.35 GHz and 5.65 GHz to 5.85 GHz bands. These radar stations can cause interference with and/or damage this device.

NOTE

The above Caution information applies to products that operate with an 802.11a device.

Taiwan

Article 14	Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.
Article 17	Any use of low power radio frequency electric machinery shall not affect aviation safety and interfere with legal communications. In the event interference is caused, the use of such electric machinery shall be immediately discontinued. Operation of such products can be resumed only when they are modified and can no longer cause interference.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.

Using this Equipment in Japan

In Japan, the frequency bandwidth of 2,400 MHz to 2,483.5 MHz for second generation low-power data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

1. Sticker

Please put the following sticker on devices incorporating this product.

The frequency bandwidth of this equipment may operate within the same range as industrial devices, scientific devices, medical devices, microwave ovens, licensed radio stations and non-licensed specified low-power radio stations for mobile object identification systems (RFID) used in factory production lines (Other Radio Stations).

1. Before using this equipment, ensure that it does not interfere with any of the equipment listed above.
2. If this equipment causes RF interference to other radio stations, promptly change the frequency being used, change the location of use, or turn off the source of emissions.
3. Contact TOSHIBA Direct PC if you have problems with interference caused by this product to Other Radio Stations.

2. Indication

The indication shown below appears on this equipment.

- 1** 2.4: This equipment uses a frequency of 2.4 GHz.
 - 2** DS: This equipment uses DS-SS modulation.
OF: This equipment uses OFDM modulation.
 - 3** The interference range of this equipment is less than 40m.
 - 4** ■ ■ ■ This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz.
- It is possible to avoid the band of mobile object identification systems.

3. TOSHIBA Direct PC

Monday – Friday: 10:00 – 17:00

Toll Free Tel: 0120-13-1100

Direct Dial: 03-3457-5916

Fax: 03-5444-9450

Device Authorization

This device obtains the Technical Regulation Conformity Certification and the Technical Conditions Compliance Approval, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Radio Law and the Telecommunications Business Law of Japan.

The Name of the radio equipment: refer to the equipment label provided on the computer

JAPAN APPROVALS INSTITUTE FOR TELECOMMUNICATIONS
EQUIPMENT

Approval Number: D01-1128JP

TELECOM ENGINEERING CENTER Approval Number: 03NY.A0018,
03GZDA0017

The following restrictions apply:

- ❖ Do not disassemble or modify the device.
- ❖ Do not install the embedded wireless module into other device.
- ❖ 5.17 GHz to 5.23 GHz for indoor use only.

Radio approvals for wireless devices

NOTE

The following information is dependent on what type of wireless device is in your computer.

Approved Countries/Regions for use for the Atheros AR5BMB-43/44 and AR5BMB5 Mini PCI Wireless network adapters

This equipment is approved to the radio standard by the countries/regions in the following table.

CAUTION

Do not use this equipment except in the countries/regions in the following table.

NOTE

This device works on passive scan only.

A peer-to-peer mode is not available in 802.11a and Turbo Mode.

802.11b (2.4 GHz)

Australia	Austria	Belgium
Canada	Denmark	Finland
France	Germany	Greece
Ireland	Italy	Liechtenstein
Luxembourg	Netherlands	New Zealand
Norway	Portugal	Sweden
Switzerland	UK	USA

Europe - Restrictions for use of 2.4 GHz Frequencies in European Community Countries

België/ Belgique:	For private usage outside buildings across public grounds over less than 300m no special registration with IBPT/BIPT is required. Registration to IBPT/BIPT is required for private usage outside buildings across public grounds over more than 300m. For registration and license please contact IBPT/BIPT.
	Voor privé-gebruik buiten gebouw over publieke grond over afstand kleiner dan 300m geen registratie bij BIPT/IBPT nodig; voor gebruik over afstand groter dan 300m is wel registratie bij BIPT/IBPT nodig. Voor registratie of licentie kunt u contact opnemen met BIPT.
	Dans le cas d'une utilisation privée, à l'extérieur d'un bâtiment, au-dessus d'un espace public, aucun enregistrement n'est nécessaire pour une distance de moins de 300m. Pour une distance supérieure à 300m un enregistrement auprès de l'IBPT est requise. Pour les enregistrements et licences, veuillez contacter l'IBPT.
Deutschland:	License required for outdoor installations. Check with reseller for procedure to follow.
	Anmeldung im Outdoor-Bereich notwendig, aber nicht genehmigungspflichtig. Bitte mit Händler die Vorgehensweise abstimmen.
France:	Restricted frequency band: only channels 1 to 7 (2400 MHz and 2454 MHz respectively) may be used outdoors in France. Please contact A.R.T. (http://www.art-telecom.fr) for applicable procedures to follow.

	Bande de fréquence restreinte: seuls les canaux 1- 7 (2400 et 2454 MHz respectivement) doivent être utilisés endroits extérieur en France. Vous pouvez contacter l'Autorité de Régulation des Télécommunications (http://www.art-telecom.fr) pour la procédure à suivre.
Italia:	License required for indoor use. Use with outdoor installations not allowed.
	E' necessaria la concessione ministeriale anche per l'uso interno. Verificare con i rivenditori la procedura da seguire.
Nederland:	License required for outdoor installations. Check with reseller for procedure to follow.
	Licentie verplicht voor gebruik met buitenantennes. Neem contact op met verkoper voor juiste procedure.

O: allowed ×: forbidden

- ❖ To remain in conformance with European spectrum usage laws for Wireless LAN operation, the above 2.4 GHz and 5 GHz channel limitations apply. The user should use the wireless LAN utility to check the current channel of operation. If operation is occurring outside of the allowable frequencies as listed above, the user must cease operating the Wireless LAN at that location and consult the local technical support staff responsible for the wireless network.
- ❖ The 5 GHz Turbo mode feature is not allowed for operation in any European Community country.
- ❖ This device must not be operated in ad-hoc mode using channels in the 5 GHz bands in the European Community. Ad-hoc mode provides a direct communication between two client devices without a Wireless LAN Access Point.
- ❖ This device must be used with Access Points that have employed and activated a radar detection feature required for European Community operation in the 5 GHz bands. This device will operate under the control of the Access Point in order to avoid operating on a channel occupied by any radar system in the area. The presence of nearby radar operation may result in temporary interruption of operation of this device. The Access Point's radar detection feature will automatically restart operation on a channel free of radar. You may consult with the local technical support staff responsible for the wireless network to ensure the Access Point device(s) are properly configured for European Community operation.

EU	Canada	Japan
USA	Australia	New Zealand

Bluetooth® wireless technology Interoperability

Bluetooth® Cards from TOSHIBA are designed to be interoperable with any product with *Bluetooth* wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- ❖ *Bluetooth* Specification as defined and approved by The *Bluetooth* Special Interest Group.
- ❖ Logo certification with *Bluetooth* wireless technology as defined by The *Bluetooth* Special Interest Group.

CAUTION

Bluetooth wireless technology is a new innovative technology, and TOSHIBA has not confirmed compatibility of its *Bluetooth* products with all PCs and/or equipment using *Bluetooth* wireless technology other than TOSHIBA portable computers.

Always use *Bluetooth* cards from TOSHIBA in order to enable wireless networks over two or more (up to a total of seven) TOSHIBA portable computers using these cards. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or pcsupport.toshiba.com in the United States for more information.

When you use *Bluetooth* cards from TOSHIBA close to 2.4 GHz Wireless LAN devices, *Bluetooth* transmissions might slow down or cause errors. If you detect certain interference while you use *Bluetooth* cards from TOSHIBA, always change the frequency, move your PC to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/43.74 yards

or more) or stop transmitting from your PC. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or pcsupport.toshiba.com in the United States for more information.

Bluetooth and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use *Bluetooth* and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your *Bluetooth* or Wireless LAN. Please contact Toshiba PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or pcsupport.toshiba.com in the United States for more information.

***Bluetooth*® wireless technology and your Health**

The products with *Bluetooth* wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with *Bluetooth* wireless technology however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because products with *Bluetooth* wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes *Bluetooth* wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of *Bluetooth* wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the equipment with *Bluetooth* wireless technology on board airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with *Bluetooth* wireless technology prior to turning on the equipment.

Regulatory statements

This product complies with any mandatory product specification in any country/region where the product is sold. In addition, the product complies with the following:

European Union (EU) and EFTA

This equipment complies with the R&TTE directive 1999/5/EC and has been provided with the CE mark accordingly.

Canada — Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.”

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term “IC” before the equipment certification number only signifies that the Industry Canada technical specifications were met.

CAUTION

FCC Interference Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

Note that any changes or modifications to this equipment not expressly approved by the manufacturer may void the authorization to operate this equipment.

CAUTION

Exposure to Radio Frequency Radiation

The radiated output power of the *Bluetooth* Card from TOSHIBA is far below the FCC radio frequency exposure limits. Nevertheless, the *Bluetooth* Card from TOSHIBA shall be used in such a manner that the potential for human contact during normal operation is minimized.

In order to comply with FCC radio-frequency radiation exposure guidelines for an uncontrolled environment, the *Bluetooth* Card from TOSHIBA has to be operated while maintaining a minimum body to antenna distance of 20 cm.

Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information.

The *Bluetooth* Card from TOSHIBA is far below the FCC radio frequency exposure limits.

Nevertheless, it is advised to use the *Bluetooth* Card from TOSHIBA in such a manner that human contact during normal operation is minimized.

NOTE

Changes or modifications made to this equipment not expressly approved by TOSHIBA or parties authorized by TOSHIBA could void the user's authority to operate the equipment.

Taiwan

Article 14	Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.
Article 17	Any use of low power radio frequency electric machinery shall not affect aviation safety and interfere with legal communications. In the event interference is caused, the use of such electric machinery shall be immediately discontinued. Operation of such products can be resumed only when they are modified and can no longer cause interference.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.

Using this equipment in Japan

In Japan, the frequency bandwidth of 2,400 MHz to 2,483.5 MHz for second generation low-power data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

1. Sticker

Please put the following sticker on devices incorporating this product.

The frequency bandwidth of this equipment may operate within the same range as industrial devices, scientific devices, medical devices, microwave ovens, licensed radio stations and non-licensed specified low-power radio stations for mobile object identification systems (RFID) used in factory production lines (Other Radio Stations).

1. Before using this equipment, ensure that it does not interfere with any of the equipment listed above.
2. If this equipment causes RF interference to other radio stations, promptly change the frequency being used, change the location of use, or turn off the source of emissions.
3. Contact TOSHIBA Direct PC if you have problems with interference caused by this product to Other Radio Stations.

2. Indication

The indication shown below appears on this equipment.

- 1** 2.4: This equipment uses a frequency of 2.4 GHz.
- 2** FH: This equipment uses FH-SS modulation.
- 3** The interference range of this equipment is less than 10m.
- 4** This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz. It is impossible to avoid the band of mobile object identification systems.

3. TOSHIBA Direct PC

Monday – Friday: 10:00 – 17:00

Toll Free Tel: 0120-13-1100

Direct Dial: 03-3457-5916

Fax: 03-5444-9450

Device Authorization

This device obtains the Technical Regulation Conformity Certification, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Radio Law of Japan.

The Name of the radio equipment: EYXF2CS

TELECOM ENGINEERING CENTER

Approval Number: 01NYDA1305

The following restrictions apply:

- ❖ Do not disassemble or modify the device.
- ❖ Do not install the embedded wireless module into other device.

DVD-ROM, multi-function drive safety instructions

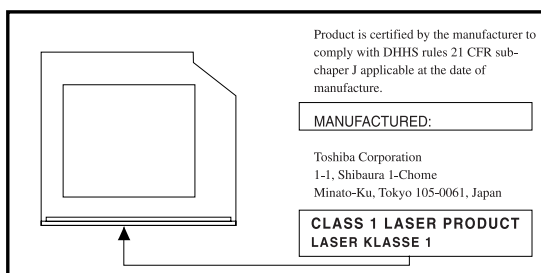

⚠ DANGER

The DVD-ROM and multi-function drives employ a laser system. To ensure proper use of this product, please read this instruction manual carefully and retain for future reference.

Never attempt to disassemble, adjust or repair a CD/DVD drive, CD-RW drive, Multi-drive or any other optical drive. You could damage the drive. You would also be exposed to laser light or other safety hazards, resulting in serious injury. Always contact an authorized Toshiba service provider, if any repair or adjustment is required.

Location of the required label

(Sample shown below. Location of the label and manufacturing information may vary.)

⚠ DANGER

This appliance contains a laser system and is classified as a CLASS 1 LASER PRODUCT. To use this model properly, read the user's guide carefully and keep it for your future reference.

Never attempt to disassemble, adjust or repair a CD/DVD drive, CD-RW drive, Multi-drive or any other optical drive. You could damage the drive. You would also be exposed to laser light or other safety hazards, resulting in serious injury. Always contact an authorized Toshiba service provider, if any repair or adjustment is required.

Introduction

Welcome to the world of powerful and portable multimedia computers! With your new Toshiba notebook computer, your access to information can accompany you wherever you go.

You will find that the Microsoft® Windows® XP Professional operating system is already installed on your computer. It offers exciting features and easy Internet access.

NOTE

Certain Microsoft® software product(s) included with this computer may use technological measures for copy protection. IN SUCH EVENT, YOU WILL NOT BE ABLE TO USE THE PRODUCT IF YOU DO NOT FULLY COMPLY WITH THE PRODUCT ACTIVATION PROCEDURES. Product activation procedures and Microsoft's privacy policy will be detailed during initial launch of the product, or upon certain reinstallations of the software product(s) or reconfigurations of the computer, and may be completed by Internet or telephone (toll charges may apply).

Some software may differ from its retail version (if available), and may not include user manuals or all program functionality.

NOTE

The product specifications and configuration information are designed for a product Series. Your particular model may not have all the features and specifications listed or illustrated. For more detailed information about the features and specifications on your particular model, please visit Toshiba's Web site at pcsupport.toshiba.com.

While Toshiba has made every effort at the time of publication to ensure the accuracy of the information provided herein, product specifications, configurations, prices, and system/component/options availability are all subject to change without notice. For the most up-to-date product information about your computer, or to stay current with the various computer software or hardware options, visit Toshiba's Web site at pcsupport.toshiba.com.

This guide

This guide introduces the computer's features. You can:

- ❖ Read the entire guide from beginning to end.
- ❖ Skim through and stop when a topic interests you.
- ❖ Use the table of contents and the index to find specific information.

Safety icons

This manual contains safety instructions that must be observed in order to avoid potential hazards that could result in personal injuries, damage to your equipment, or loss of data. These safety cautions have been classified according to

the seriousness of the risk, and the icons highlight these instructions as follows:

⚠ DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

NOTE

Provides important information.

Other icons used

Additional icons highlight other helpful or educational information:

TECHNICAL NOTE: This icon highlights technical information about the computer.

HINT: This icon denotes helpful hints and tips.

DEFINITION: This icon indicates the definition of a term used in the text.

Other documentation

Your computer comes with the following documentation:

- ❖ An electronic version of the user's guide.
- ❖ It may also contain guides for other programs that may come with your system.

For accessory information, visit Toshiba's Web site at accessories.toshiba.com.

Service options

Toshiba offers a full line of optional service programs to complement its limited warranty. Toshiba's standard limited warranty, extended warranty, and service upgrade terms and conditions are available at www.warranty.toshiba.com.

To stay current on the most recent software and hardware options for your computer, and for other product information, be sure to regularly check the Toshiba Web site at pcsupport.toshiba.com.

If you have a problem or need to contact Toshiba, see “[If Something Goes Wrong](#)” on page 206.

Chapter 1

Getting Started

This chapter provides tips for working comfortably, summarizes how to connect components, and explains what to do the first time you use your notebook computer.

Selecting a place to work

Your computer is portable and designed to be used in a variety of circumstances and locations.

Creating a computer-friendly environment

Place the computer on a flat surface that is large enough for the computer and any other items you are using, such as a printer. Leave enough space around the computer and other equipment to provide adequate ventilation. Otherwise, they may overheat.

To keep your computer in prime operating condition, protect your work area from:

- ❖ Dust, moisture, and direct sunlight.
- ❖ Equipment that generates a strong electromagnetic field, such as stereo speakers (other than speakers that are connected to the computer) or speakerphones.
- ❖ Rapid changes in temperature or humidity and sources of temperature change such as air conditioner vents or heaters.
- ❖ Extreme heat, cold, or humidity.
- ❖ Liquids and corrosive chemicals.

Keeping yourself comfortable

The Toshiba Instruction Manual for Safety and Comfort, that shipped with your computer, contains helpful information for setting up your work environment and tips for working comfortably throughout the day.

Precautions

Your computer is designed to provide optimum safety and ease of use, and to withstand the rigors of travel. You should observe certain precautions to further reduce the risk of personal injury or damage to the computer.

- ❖ Avoid prolonged physical contact with the underside or surface of the computer.

⚠ WARNING

Never allow any liquids to spill into any part of your computer, and never expose the computer to rain, water, seawater or moisture. Exposure to liquid or moisture can cause electric shock or fire, resulting in damage or serious injury. If any of these eventualities should accidentally occur, immediately:

1. Turn off the computer.
2. Disconnect the AC adapter from the power plug socket and computer.
3. Remove the battery pack.

Failure to follow these instructions could result in serious injury or permanent damage to the computer.

Do not turn on the power again, until you have taken the computer to an authorized service center.

⚠ WARNING

If you experience discomfort while operating the computer, stop immediately and rest. Continuous operation for long periods without adequate rest may cause pain in the arms, wrists, hands, neck or other part of the body. If pain persists despite rest, consult your doctor.

⚠ CAUTION

PC base can become hot! Avoid prolonged contact to prevent heat injury to skin.

Please refer to the "Instruction Manual for Safety and Comfort" for more information.

⚠ CAUTION

Some PC Cards can become hot with prolonged use. Overheating of a PC Card can result in errors or instability in its operation.

Before you remove a PC Card, always wait for it to cool. You could get burned removing a hot PC Card.

⚠ CAUTION

Never place a heavy object on the computer and be careful not to drop a heavy object onto the computer. It could damage the computer or cause system failure.

- ❖ Never turn off the computer if a drive light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk may damage the disk, the drive, or both.

- ❖ Keep the computer and disks away from objects that generate strong magnetic fields, such as large stereo speakers.

Information on disks is stored magnetically. Placing a magnet too close to a disk can erase important files.

⚠ CAUTION

Handle discs carefully. Avoid touching the surface of the disc. Grasp it by its center hole and edge. If you handle the disc incorrectly, you could damage the disc and possibly lose data.

- ❖ Scan all new files for viruses.

This precaution is especially important for files you receive via email or download from the Internet. Occasionally, even new programs you buy from a supplier may contain a computer virus. You need a special program to check for viruses. Ask your dealer to help you.

Important information on your computer's cooling fan

Your computer may have a CPU cooling fan that cools the CPU by drawing outside air into the computer. The cooling fan may be located on the bottom of the computer.

CAUTION

To prevent possible overheating of the CPU, make sure the air intake on the cooling fan is not blocked. The fan draws in air by creating a vacuum. If the fan is blocked, it could cause the CPU to run at a lower performance level or cause the computer to shut down. Loose items such as notebook and tissue paper, plastic wrappers, or other similar materials can block the air intake, preventing air from reaching the CPU. Do not use the computer on surfaces with objects that can be drawn in by the cooling fan.

NOTE

The cooling fan location will vary depending on the computer.

Setting up your computer

TECHNICAL NOTE: You must complete all setup steps up to and including “Setting up your software” on page 48 before adding external or internal components to your computer. These components include, but are not limited to, a mouse, keyboard, printer, memory, and PC cards.

Your computer contains a rechargeable main battery that needs to be charged before you can use it.

To use external power or to charge the battery you must attach the AC adapter. See [“Connecting the AC adapter” on page 51](#).

To register your computer online or to sign up for an Internet account during the initial setup of your computer, you must connect the built-in modem to a telephone line. See [“Connecting the modem” on page 78](#).

Setting up your software

NOTE The names of windows displayed, and the order in which windows appear, may vary according to your software setup choices.

The first time you turn on your computer, the Setup Wizard guides you through steps to set up your software.

- 1 From the welcome screen click **Next** to enter the Setup Wizard.
- 2 Confirm acceptance of Microsoft’s End User License Agreement and click **Next**.
- 3 Select the appropriate option from the Help protect your computer screen and click **Next**.
- 4 Enter the computer name and description and click **Next** or **Skip**.
- 5 Select how your computer will connect to the internet and click **Next**.

The computer will pause for a moment while checking for an internet connection.

If an Internet connection could not be found, a window will display the message: “An Internet connection could not be chosen.” Click **Next** to continue.

NOTE

If you are connecting your computer to a network, consult your system administrator before you choose your computer name and network settings.

- 6 Follow the remaining screen prompts to complete the setup process.

Once you click the final screen, your computer restarts automatically.

Registering your computer with Toshiba

Product registration is strongly recommended, and allows Toshiba to send the Customer periodic updates, announcements, and special offers applicable to the product. Product registration can be completed during the initial start up process of your computer. If you opt not to register at that time, you can either double-click the icon on your desktop or go to the Toshiba web site at www.register.toshiba.com. Customer failure to complete Product Registration will not diminish Customer rights under this limited Warranty.

NOTE

To register online, you must be connected to the Internet via your computer's modem and a voice-grade telephone line, or by a Local Area Network.

Adding external devices

NOTE

Before adding external devices or memory, Toshiba recommends setting up your software. See [“Setting up your software” on page 48](#).

After starting your computer for the first time you may want to:

- ❖ Add more memory (see [“Adding memory \(optional\)” on page 58](#))
- ❖ Connect a mouse (see [“Connecting a mouse” on page 76](#))
- ❖ Connect a full-size keyboard (see [“Connecting a keyboard” on page 137](#))
- ❖ Connect an external monitor (see [“Using an external monitor” on page 137](#))
- ❖ Connect a local printer (see [“Connecting a printer” on page 76](#))
- ❖ Connect an external DVD-ROM or multi-function drive (see [“Connecting an external DVD-ROM/multi-function drive” on page 98](#))
- ❖ Install PC Cards (see [“Using PC Cards” on page 138](#))

Connecting the AC adapter

Your computer requires power to operate. Use the power cord/cable and AC adapter to connect the computer to a live electrical outlet, or to charge the computer's battery.

⚠ WARNING

Never pull on a power cord/cable to remove a plug from a socket. Always grasp the plug directly. Failure to follow this instruction may damage the cord/cable, and/or result in a fire or electric shock, possibly resulting in serious injury.

⚠ WARNING

When you connect the AC adapter to the computer, always follow the steps in the exact order as described in the User's Guide. Connecting the power cord/cable to a live electrical outlet should be the last step; otherwise, the adapter DC output plug could hold an electrical charge and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.

⚠ CAUTION

Always use the Toshiba AC adapter that was provided with your computer, or use Toshiba recommended alternate models to avoid any risk of fire or other damage to the computer. Use of an incompatible AC adapter could cause fire or damage to the computer, possibly resulting in serious injury.

Sample power cord/cable and AC adapter

To connect AC power to the computer:

- 1 Connect the power cord/cable to the AC adapter.

⚠ WARNING

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. ***Wash hands after handling.***

- 2 Plug the AC adapter into the DC-IN on the back of the computer.

*Connecting the AC adapter to the computer*

- 3** Connect the power cord/cable to a live electrical outlet.

The AC power light on the indicator panel glows blue.

⚠ WARNING

Never tamper with the power cable or plug; never splice or alter a power cable; never bend or twist a power cable; never place heavy objects on a power cable; never place a power cable near a heat source; never run a power cable through a pinch point such as a door or window; never use nails, staples or similar objects to fasten or attach cord in place; never attempt to disassemble or repair an AC adapter or a Battery Charger. Doing any of the above may damage the cables, and/or result in a fire or electric shock, possibly resulting in serious injury.

⚠ WARNING

Never attempt to connect or disconnect a power plug with wet hands. Failure to follow this instruction could result in an electric shock, possibly resulting in serious injury.

The computer's main battery light gives you an indication of the main battery's current charge:

- ❖ Glows amber while the main battery is being charged (AC adapter connected)

- ❖ Glows blue when the main battery is fully charged
- ❖ Is unlit when the battery has discharged, the battery is not charging, or the AC adapter is not plugged into the computer or AC outlet
- ❖ Flashes amber means the main battery charge is low and it is time to recharge the main battery or plug in the AC adapter.

NOTE

If the AC power light flashes amber during charging, either the main battery is malfunctioning, or it is not receiving input from the AC power supply.

Disconnect the AC cable and remove the main battery pack. See [“Changing the main battery” on page 126](#) for information on replacing the main battery.

Using the main battery

Your computer came with its main battery already installed. Before using the main battery to power the computer you must first charge it.

To charge the main battery, leave the computer plugged into a live wall outlet for at least six hours with the computer turned off. After that, the main battery will be completely charged and ready to power the computer.

TECHNICAL NOTE: The RTC battery does not charge while the computer is turned off, even when AC power is attached.

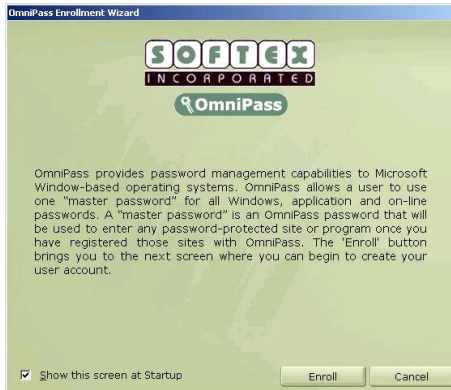

The RTC battery charges when the computer is powered on.

For more information about installing or removing the main battery see [“Changing the main battery” on page 126](#).

Using the computer for the first time

NOTE

The first time you use your computer, a utility called OmniPass runs automatically. When you see the OmniPass welcome screen, **DO NOT** click **Enroll**. Instead, click **Cancel** to exit OmniPass. You must first establish a Windows password before you can use the OmniPass utility. For information on OmniPass, see [“Fingerprint recognition utility” on page 187](#).

Sample OmniPass welcome screen

Opening the display panel

Lift the display panel to open it.

Opening the display panel

CAUTION

To avoid damaging the display panel do not force it beyond the point where it moves easily.

Never lift or move the computer using the display panel.

Small bright dots may appear on your screen display when you turn on your PC. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

Your computer's features and specifications

Certain notebook chassis are designed to accommodate all possible configurations for an entire product Series. Your selected model may not have all the features and

specifications corresponding to all of the icons or switches shown on the notebook chassis, unless you have selected all those features.

This information applies to all the features and icons described in this guide.

Below are examples of some of the many possible icons used on your computer:

Sample system icons

Turning on the power

- 1 Make sure any external devices (such as the AC adapter, if you plan to use AC power rather than battery power) are properly connected and ready.
- 2 Check to ensure that any disk drives are empty.
- 3 Press and hold the power button until the on/off light on the system indicator panel glows blue—about one second.

HINT: After turning on the computer for the first time, do not turn off the power again until the operating system has completely loaded.

The AC power light glows blue when the computer is connected to an external power source.

The main battery light:

- ❖ Glows amber while the main battery is being charged (AC adapter connected)
- ❖ Glows blue when the main battery is fully charged

- ❖ Is unlit when the battery has discharged, the battery is not charging, or the AC adapter is not plugged into the computer or AC outlet

The hard disk drive light flashes to indicate that the hard disk drive is in use.

CAUTION

Never turn off the computer while any of the drives are in use.

Adding memory (optional)

HINT: To purchase additional memory modules, see the accessories information packaged with your system or visit accessories.toshiba.com.

Your computer comes with enough memory to run most of today's popular applications. You may want to increase the computer's memory if you use complex software or process large amounts of data.

For more information on memory options, check the accessories information that came with your computer, or visit accessories.toshiba.com.

NOTE

Before adding external devices or memory, Toshiba recommends setting up your software. See "Setting up your software" on page 48.

Installing a memory module

Additional memory modules can be installed in the memory module slot on the base of the computer. You will need a standard Phillips No. 0 screwdriver for this procedure.

CAUTION If you use the computer for a long time, the memory module will become hot. If this happens, let the module cool to room temperature before you replace it.

CAUTION To avoid damaging the computer's screws, use a standard Phillips No. 0 screwdriver that is in good condition.

CAUTION Installing a memory module with the computer's power on may damage the computer, the module, or both.

If the computer is on, begin at step 1; otherwise, skip to step 3.

- 1 If the computer is on, click **Start, Turn off computer**.

The Turn off computer window appears.

- 2 Click **Turn Off**.

The operating system turns off the computer.

- 3 Unplug and remove any cables connected to the computer, including the AC adapter.

- 4 Remove the battery. For more information on removing the battery, see [“Removing the battery from the computer” on page 126](#).

- 5 Close the display panel and turn the computer upside down to locate the memory slot cover.

Sample base of the computer

- 6** Using a standard Phillips No. 0 screwdriver, loosen the screw that secures the memory slot cover.

Sample loosening the memory slot cover screw

- 7** Remove the memory slot cover.
- 8** Place the screw and the cover in a safe place so that you can retrieve them later.

CAUTION

Static electricity can damage the memory module. Before you handle the module, touch a grounded metal surface to discharge any static electricity you may have built up.

To avoid damaging the memory module, be careful not to touch its pin connector on the side you insert into the computer.

- 9 Remove the new memory module from its antistatic packaging.

CAUTION

Avoid touching the connectors on the memory module or on the computer. Grease or dust on the connectors may cause memory access problems.

- 10 Insert the memory module in the slot on the underside of the computer.

Sample inserting the memory module

- 11** Hold the memory module by its edges so that the gold connector bar faces the slot, at a slight angle to the socket.

Sample inserting the memory module into the socket

- 12** Check that the module is inserted completely into the socket and lined up squarely with the socket clips.

Sample aligning the module into the socket

- 13** Gently press down on the memory module connector until the clips snap into place.

Sample pressing down on the memory module connector until the clips snap into place

Do not force the memory module into position. The memory module should be completely inserted into the socket and level when secured in place.

The clips on either side of the memory module snap into place when the memory module is properly inserted.

- 14** Replace the memory module slot cover and tighten the screw.
- 15** Re-insert the battery. For more information on inserting the battery, see [“Changing the main battery” on page 126](#).
- 16** Turn the computer right side up.
- 17** Reconnect the cables.
- 18** Restart the computer.

TECHNICAL NOTE: You must have at least one memory module installed for the computer to work.

You can now continue setting up the computer. When the operating system has loaded, you can verify that the computer has recognized the additional memory module.

If you are adding an extra memory module after setting up the computer, verify that the computer has recognized it correctly as described in [“Checking total memory” on page 65](#).

Removing a memory module

If you need to remove a memory module:

- 1 Complete steps 1–8 in [“Installing a memory module” on page 59](#) to shut down the computer and open the memory module slot cover.

CAUTION

Do not try to remove a memory module with the computer turned on. You can damage the computer and the device.

Do not remove the memory module while the computer is in Standby mode. The computer could hang up the next time you turn it on and data in memory will be lost. In either of the above cases, the Standby configuration will not be saved.

The following message appears when you turn on the power:

Warning: Resume Failure
Press Any Key To Continue

If the computer hangs up when you turn it on, perform the following: Press the power button and hold it down for at least ten seconds, then turn the power on again.

- 2 Pull the clips away from the memory module.
The memory module pops up slightly.
- 3 Gently lift the memory module to a 45 degree angle and slide it out of the slot.

Removing the memory module

- 4 Replace the memory module slot cover and tighten the screw.
- 5 Turn the computer over and restart it.

TECHNICAL NOTE: You must have at least one memory module installed for the computer to work.

Checking total memory

When you add or remove a memory module, you can check that the computer has recognized the change. To do this:

- 1 Click **Start, Control Panel, Performance and Maintenance**, and then **System**.
- 2 The **General** tab view automatically appears and shows total memory.

If the computer does not recognize the memory configuration, turn off the computer, remove the memory slot cover, and make sure the memory module is seated properly, as described in step 13 of “[Installing a memory module](#)” on page 59

Hard Disk Drive (HDD) Recovery Utilities

NOTE HDD Recovery is available for the Portégé R200 only.

Your computer has been configured with a hard disk partition to allow you to recover your hard disk drive or reinstall selected applications and software features or utilities.

NOTE It is strongly recommended that you create recovery CDs/DVDs before using your system. For more information on creating Recovery media, see [“Creating Recovery CDs/DVDs” on page 67](#).

Using the HDD Recovery Utilities, you can:

- ❖ Create HDD Recovery CDs or DVDs using an optional external writable drive
- ❖ Recover your hard disk drive to the factory-set default.
- ❖ Recover just your C: drive, leaving any other partitions you may have created intact, for example, a D: drive.
- ❖ Recover your hard disk drive to the factory-set default without the HDD Recovery partition
- ❖ Delete your HDD Recovery partition without the risk of losing your data
- ❖ Reinstall drivers and applications which were bundled with your computer

Creating Recovery CDs/DVDs

Copying the HDD Recovery Utilities to CD or DVD gives you the ability to recover your hard disk drive and reclaim additional hard disk space used to store the HDD Recovery Utilities on your computer.

NOTE

A writable external optical media (CD or DVD) drive that is compatible with the computer is required to create Recovery discs. The external optical media drive must be purchased separately. You can purchase an optical media drive from Toshiba's Web site at accessories.toshiba.com.

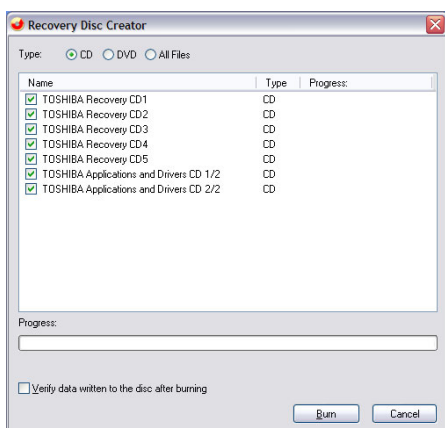

NOTE

The system will prompt you to insert the appropriate number of CDs or DVDs to copy the HDD Recovery Utilities.

To create recovery CDs/DVDs:

- 1 Double-click the Recovery Disc Creator icon on the Windows desktop. You can also launch the application by clicking **Start, All Programs**, then **Hard Disk Recovery Utilities**.
- 2 Select CD, DVD, or All Files (to create Recovery media on both CDs and DVDs).

Sample Recovery Disc Creator screen

- 3 Select the items you want to copy by clicking the checkbox next to the item's Name – recovery files, applications (original bundled drivers and applications), or both the recovery files and applications.
- 4 Click **Burn**.
- 5 Insert the first CD or DVD into your computer's optional external CD/DVD writable drive when prompted.
- 6 Follow the on-screen prompts for completing the copy process.

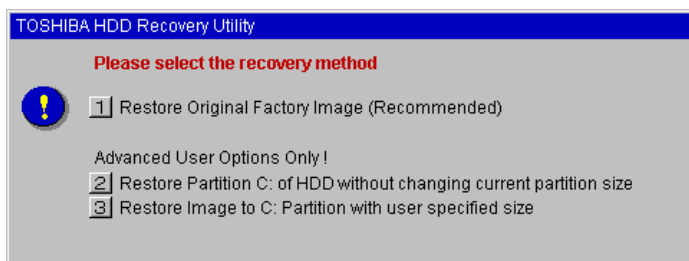

For more information on using the Recovery media you have created with the preceding steps, see [“Hard disk drive recovery using the Recovery media”](#) on page 71.

Hard disk drive recovery using the recovery partition

You have the options of recovering your system using the HDD Recovery partition to the factory-set default, or recovering just your C: drive and leaving other partitions (for example, a D: drive) intact, or changing the size of your C: drive and then recovering it.

To recover your hard disk drive using the utilities stored on your computer's HDD:

- 1 Make sure the computer is turned off.
- 2 Press and hold the **0** (zero) key on your keyboard while powering on the computer. When the computer powers on, the TOSHIBA HDD Recovery Utility screen displays.

Sample TOSHIBA HDD Recovery Utility screen

Recovering the original factory image (recommended)

CAUTION

Recovering a hard disk drive to its factory default setting deletes all partitions on the hard disk drive and your information will be lost. Be sure to save your work first.

- 1 Press **1** on the keyboard to recover your hard disk drive to its original factory setting. A confirmation message displays reminding you that all data will be lost during the recovery process. Be sure you have saved your work before proceeding.
- 2 Click **Yes** to begin the recovery. Once complete, a message displays that the HDD has been recovered.
- 3 Press any key on the keyboard to restart the computer.

Recovering the C: partition of the HDD without changing the current partition size

CAUTION

Recovering the C: drive to its factory default setting reformats your drive and your information on the recovered drive will be lost. Be sure to save your work first. If you have created other partitions (for example, a D: drive) those partitions and any information on them will not be affected and will remain intact.

To recover only your C: drive:

- 1 Press **2** on the keyboard when the TOSHIBA HDD Recovery Utility screen displays. A confirmation message appears, reminding you that all information on the C: drive will be lost during the recovery process. Be sure you have saved your work before proceeding.
- 2 Click **Yes** to begin the restoration. Once complete, a message displays that the HDD has been recovered.
- 3 Press any key on your keyboard to restart the computer.

Recovering the C: partition with a user specified size

CAUTION

Resizing and recovering your C: drive to its factory default setting reformats all partitions on the HDD (for example, if you created a D: drive, it will be deleted during the recovery process) and your information will be lost. Be sure to save your work first.

To resize and recover your C: drive:

- 1 Press **3** on the keyboard when the TOSHIBA HDD Recovery Utility screen displays. A confirmation message appears, reminding you that all partitions will be reformatted and all

information will be lost during the recovery process. Be sure you have saved your work before proceeding.

- 2 Click **Yes** to begin the restoration and to specify the size of the C: drive.
 - ❖ Press the Left/Right Arrow keys to increase/decrease the C: drive size by 1 GB.
 - ❖ Press the Up/Down Arrow keys to increase/decrease the C: drive size by 5 GB.

NOTE

The size of the C: drive will display on the progress bar as you make your selections.

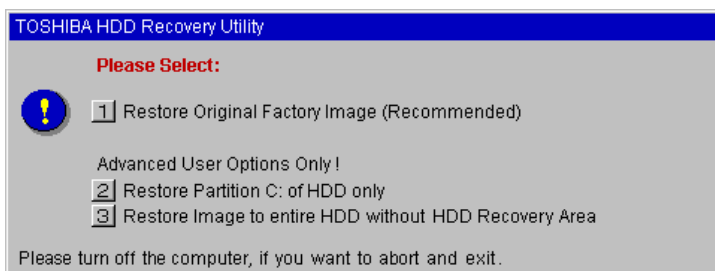

- 3 Click **Enter** to begin the restoration. Once complete, a message displays that the HDD has been recovered.
- 4 Press any key on your keyboard to restart the computer.

Hard disk drive recovery using the Recovery media

If you need to recover your computer to its default factory state, you can re-build the system using your HDD Recovery Utilities.

To recover your hard disk drive using the utilities burned to CDs or DVDs (refer to [“Creating Recovery CDs/DVDs” on page 67](#)):

- 1 Insert the first recovery CD or DVD into your optional external CD/DVD drive.
- 2 Power on the computer while holding F12.
- 3 Select the CD/DVD drive icon and press **Enter**. The TOSHIBA HDD Recovery Utility screen displays.

Sample TOSHIBA HDD Recovery Utility screen

Recovering the original factory image (recommended)

CAUTION

Recovering a hard disk drive to its factory default setting deletes all partitions on the hard disk drive and your information will be lost. Be sure to save your work first.

- 1** Press **1** on the keyboard to recover your hard disk drive to its original factory setting. A confirmation message displays, reminding you that all data will be lost during the recovery process. Be sure you have saved your work before proceeding.
- 2** Click **Yes** to begin the recovery process. Once complete, a message displays that the HDD has been recovered.
- 3** Press any key on the keyboard to restart the computer.

Recovering the C: partition of the HDD only

CAUTION

Recovering the C: drive to its factory default setting reformats your drive and your information on the recovered drive will be lost. Be sure to save your work first. If you have created other partitions (for example, a D: drive) those partitions and any information on them will not be affected and remain intact.

To recover only your C: drive:

- 1 Press **2** on the keyboard when the TOSHIBA HDD Recovery Utility screen displays. A confirmation message appears, reminding you that all information on the C: drive will be lost during the recovery process. Be sure you have saved your work before proceeding.
- 2 Click **Yes** to begin the restoration. Once complete, a message displays that the HDD has been recovered.
- 3 Press any key on your keyboard to restart the computer.

Recovering the entire HDD without the HDD Recovery partition

This option recovers your C: drive without creating the HDD Recovery Utilities partition. This will increase the size of your C: drive.

CAUTION

Recovering your C: drive to its factory default state without the recovery partition reformats all partitions on the HDD (for example, if you created a D: drive, it will be deleted during the recovery process) and your information will be lost. Be sure to save your work first.

To recover your C: drive without the recovery partition:

- 1 Press **3** on the keyboard when the TOSHIBA HDD Recovery Utility screen displays. A confirmation message appears, reminding you that all partitions will be reformatted and all data will be lost during the recovery process. Be sure you have saved your work before proceeding.
- 2 Click **Yes** to begin the restoration. Once complete, a message displays that the HDD has been recovered.
- 3 Press any key on your keyboard to restart the computer.

Checking the HDD operating status

After restoring your hard disk drive, you can check its status as follows:

- 1 Click **Start**, and then click **Control Panel**.
- 2 Double-click the **Performance and Maintenance** icon.
- 3 Double-click the **Administrative Tools** icon.
- 4 Double-click the **Computer Management** icon.
- 5 Click **Disk Management** (Storage).
- 6 Highlight the hard disk drive in the Volume list to display its status in the lower portion of the screen.

Deleting the Hard Disk Recovery Utility

You can delete the HDD recovery partition without losing your data.

- 1 Click **Start**, **All Programs**, **Hard Disk Recovery Utilities**, then **Delete Hard Disk Recovery Partition**. When the computer powers on, the Delete Hard Disk Recovery Utility warning screen displays.

Sample Delete Hard Disk Recovery Utility screen

- 2 Click **OK** to continue.
- 3 When the following screen displays, click **Yes** to confirm.

Sample Delete Hard Disk Recovery Utility confirmation screen

After the Delete Hard Disk Recovery Utility has completed, it assigns the appropriate drive letter (for example, E: drive) for the extra space and formats the drive.

Installing drivers and applications

The TOSHIBA Application Installer allows you to reinstall the drivers and applications that were originally bundled with your computer.

To reinstall drivers and applications:

- 1 Double-click the Toshiba Application Installer icon on the Windows desktop. You can also launch the application by

clicking **Start, All Programs**, then **Hard Disk Recovery Utilities**.

- 2 Click **Next**.
- 3 Click the item(s) you want to install.
- 4 Click **Install**.
- 5 Follow the on-screen prompts to complete the installation process.

Connecting a mouse

You may want to use a USB-compatible mouse instead of the TouchPad, the computer's built-in pointing device.

To connect the mouse to your computer or the optional Slim Port Replicator, plug its cable into one of the USB ports. You can connect it while the computer is on.

The operating system automatically detects the mouse. The mouse and TouchPad can be used at the same time.

Connecting a printer

NOTE

Your printer documentation may require you to install the printer software before physically connecting the printer to your computer. If you do not install the software as instructed by the printer manufacturer, the printer may not function correctly.

Read the documentation that came with your printer. Follow the manufacturer's instructions when connecting a local printer.

You can connect a USB-compatible printer to your computer through the USB ports. To determine if the printer is USB compatible, check its documentation.

To make the connection, you need a suitable USB cable, which may come with your printer. If a USB cable was not included with your printer, you can purchase one from a computer or electronics store.

TECHNICAL NOTE: Some printers require a specific installation process. Refer to your printer installation guide for instructions.

To connect a printer to your computer or the optional Slim Port Replicator:

- 1 If the computer is on, turn it off.
- 2 Connect the printer cable to the printer and then connect the other end to one of the computer's USB ports.
- 3 Plug the printer's power cable into a live electrical outlet.

See your printer documentation for additional configuration steps, or see [“Setting up a printer” on page 77](#).

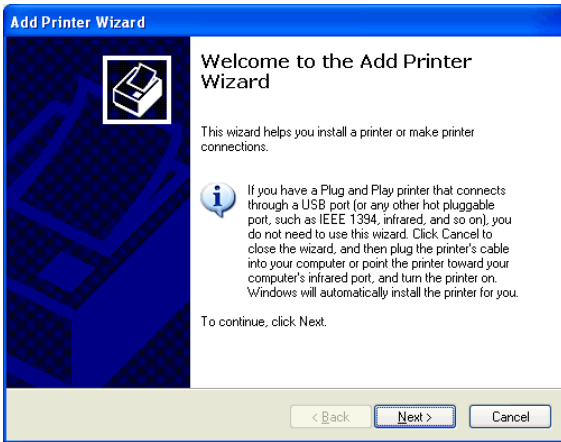

Setting up a printer

TECHNICAL NOTE: Some printers require a specific installation process. Refer to your printer installation guide for instructions.

If your printer does not support Plug and Play, follow these steps to set it up for the first time. You only need to set up the printer once.

- 1 Click **Start, Printers and Faxes**.
The Printers and Faxes window appears.
- 2 Click **Add a Printer**.
The Add Printer Wizard appears.

Sample Add Printer Wizard

- 3 Follow the on-screen instructions to set up your printer.

Connecting the modem

Your computer comes with an integrated modem.

Before you can communicate using the modem, you need to connect it to a standard voice-grade telephone line.

- 1 Locate the modem port on the back of your computer.
- 2 Plug one end of a telephone cable (purchased separately) into the modem port on the back of the computer.

Connecting the telephone cable to the modem port

-
- 3 Connect the other end of the telephone cable to the RJ11 wall jack of a standard voice-grade telephone line.

Connecting to a wall jack

CAUTION

The modem is designed for use with a standard analog telephone line. Never connect the modem to a digital telephone line. A digital line will damage the modem.

For more information on using a modem, see [“Setting up for communications” on page 151](#).

Connecting other external devices

For more information on attaching the optional Slim Port Replicator, an external monitor and other external USB-compatible devices, such as a keyboard and diskette drive, see the [“Expansion Options” on page 133](#).

Using the TouchPad

The TouchPad, the small, smooth square cutout located in front of the keyboard, is sensitive to touch and enables you to move the cursor with the stroke of a finger. Simply move your finger on the TouchPad in the direction you'd like to move the cursor:

- ❖ To move the cursor to the top of the page, push your finger forward on the TouchPad.
- ❖ To move the cursor to the bottom of the page, drag your finger toward yourself.
- ❖ To move the cursor to the right side of the page, slide your finger across the TouchPad from left to right.
- ❖ To move it to the left side, slide your finger from right to left.

NOTE

Because the TouchPad is much smaller than the display screen, moving your cursor across the screen often means having to move your finger several times across the TouchPad in the preferred direction.

Once you've positioned your cursor, you can double-tap the TouchPad or click the buttons to open a program or file, or to get information about an icon.

Primary and secondary control buttons

When you want to click or choose an item, use the TouchPad to move the pointer/cursor to the item. Once the pointer/cursor is positioned, you can double-tap the TouchPad or click the buttons to open a program or file, or to get information about an icon.

The control buttons are adjacent to the TouchPad and are used like the buttons on a mouse. The primary control button is the

left one and corresponds to the left mouse button. To double-click, press the primary button twice in rapid succession.

The function of the secondary button depends on the program you are using. It usually corresponds to the right mouse button. Check your program's documentation to find whether it uses the secondary mouse button.

Disabling or enabling the TouchPad

The TouchPad is enabled by default. To change the enable/disable TouchPad setting:

- 1** Click **Start, Control Panel**.
The Control Panel window appears.
- 2** Click **Printers and Other Hardware**.
- 3** Click the **Mouse** icon.
The Mouse Properties window appears.
- 4** Click the **TouchPAD ON/OFF** tab.
The TouchPAD ON/OFF tab view window appears.
- 5** Select **Disable** or **Enable**, whichever is appropriate.
- 6** Click **Apply**.
- 7** Click **OK**.
The Mouse Properties window closes.
- 8** Close the Printers and Other Hardware window.
- 9** Close the Control Panel window.

NOTE

The Fn + F9 shortcut can be used to enable or disable the TouchPad (see [“Hot Keys” on page 250](#)).

Using the Toshiba Assist button

i

The Toshiba Assist button, located to the left of the keyboard, activates the Toshiba Assist. This gives you quick access to some common functions. You can change the function of this button so that it performs other operations if you desire.

Sample TOSHIBA Assist screen

To reprogram the TOSHIBA Assist button:

- 1 Click **Start**, then **Control Panel**, then **Printers and Other Hardware**.
- 2 Select **Toshiba Controls**.
This displays the **Toshiba Controls Properties** dialog box.
- 3 Select the box under the **TOSHIBA Assist** button section to bring up the available options.

There are six options available when assigning a function to the TOSHIBA Assist button:

- ❖ TOSHIBA Assist

-
- ❖ Starts your Internet Explorer (default browser)
 - ❖ Starts your MS Outlook (default e-mail program)
 - ❖ Disables the button
 - ❖ Starts a custom program
- 4 Select the option to which you wish to assign the TOSHIBA Assist button.

To assign a custom program, choose **Select your program** and enter the appropriate information for the program, or select **Browse** to find the program.

- 5 Click **OK** twice when finished.

Customizing your computer's settings

There are several ways in which you can customize your computer to suit your particular requirements. Refer to your operating system documentation or Help and Support for details.

You may also wish to customize your power usage settings. For more information, see [“Conserving battery power” on page 123](#). There are additional custom settings you can choose. See [“Toshiba Utilities” on page 158](#).

Powering off the computer

It's a good idea to power off your computer when you are not using it for a while.

If you are using the computer for the first time, leave the computer plugged into a power source (even though the computer is off) to fully charge the main battery. With the computer off, it may take up to six hours to charge the main battery.

Guidelines for powering off the computer:

- ❖ If you have work in progress and aren't connected to a network, use the Hibernate command to save your system settings to the hard disk so that, when you turn on the computer again, you automatically return to where you left off.
- ❖ To leave the computer off for a longer period, power down the computer. The Windows® XP Professional operating system uses the Shut down command to power down the computer if you are connected to a Windows® network server (domain server) or the Turn Off command if you are not.
- ❖ When the hard disk drive light on the system indicator panel is on, do not turn off the power. Doing so may damage your hard disk.

For more information, see [“Powering off the computer” on page 83](#).

CAUTION

Never turn off the computer while any drive is in use. Doing so may damage the media in use and result in loss of data.

Closing the display panel

When you are finished using the computer, power off and close the display panel to keep dust and dirt out of the computer.

If you close the display panel while the computer is still on, and if you have an action feature set, the computer will perform that action (Nothing, Standby, Hibernate). For more information, see [“TOSHIBA Power Saver” on page 169](#).

Different ways to turn the computer on and off

Pressing the power button is not the only way to turn on and off the computer.

Alternatives include:

- ❖ Using Hot Key combinations
- ❖ Opening and closing the display panel

For more information, see [“Using Hibernation” on page 107](#) and [“Using Standby” on page 110](#).

Caring for your computer

This section gives tips on cleaning and moving your computer. For information about taking care of your computer’s main battery, see [“Taking care of your battery” on page 128](#).

Cleaning the computer

CAUTION

Keep liquids, including cleaning fluid, out of the computer’s keyboard, speaker grille and other openings. Never spray cleaner directly onto the computer. Never use harsh or caustic chemical products to clean the computer.

To keep your computer clean, gently wipe the display panel and exterior case with a lightly dampened cloth.

Moving the computer

Before moving your computer, even across the room, make sure all disk activity has ended (the drive-in-use light stops glowing) and all external peripheral cables are disconnected.

CAUTION

Do not pick up the computer by its display panel or by the back (where the ports are located). Doing so could damage the system.

Using a computer lock

You may want to secure your computer to a heavy object such as your desk. The easiest way to do this is to purchase an optional computer lock cable. For more information on purchasing a cable lock, visit accessories.toshiba.com.

Sample computer lock cable

To secure the computer:

- 1 Wrap the cable through or around some part of a heavy object.

Make sure there is no way for a potential thief to slip the cable off the object.

- 2 Pass the locking end through the loop.

- 3 Insert the cable's locking end into the security lock slot on your computer, then engage the locking device.

The computer is now securely locked.

Chapter 2

Learning the Basics

This chapter lists computing tips and provides important information about the system's basic features.

Computing tips

- ❖ Save your work frequently.

Your work stays in the computer's temporary memory until you save it to the disk. If the network you are using goes down and you must restart your computer to reconnect, or your battery runs out of charge while you are working, you will lose all work since you last saved.

See [“Saving your work” on page 93](#) for further information.

HINT: Some programs have an automatic save feature which you can turn on. This feature saves your file to the hard disk at preset intervals. See your software documentation for details.

- ❖ Back up your files to discs (or other removable storage media) on a regular basis. Label the backup copies clearly and store them in a safe place.

If your hard disk suddenly fails, you may lose all the data on it unless you have a separate backup copy.

- ❖ Use Error-checking and Disk Defragmenter regularly to conserve disk space and improve performance.
- ❖ Scan all new files for viruses. This precaution is especially important for files you receive via diskette, email, or download from the Internet.
- ❖ Take frequent breaks to avoid repetitive-motion injuries and eyestrain.
- ❖ Do not turn off the computer if a drive indicator light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk may damage the disk, the drive, or both.

- ❖ Before turning off the computer, use the Turn off computer command or Standby command. See [“Powering down the computer” on page 101](#) to learn more about Standby.

NOTE

The operating system records information, such as your desktop setup, during its shutdown procedure. If you do not let the operating system shut down, details such as new icon positions may be lost.

Using the keyboard

Your computer's keyboard contains character keys, control keys, function keys, and special Windows® keys, providing all the functionality of a full-size keyboard.

Sample keyboard

Character keys

Typing with the character keys is very much like typing on a typewriter, except that:

- ❖ The spacebar creates a space character instead of just passing over an area of the page.
- ❖ The lowercase l (el) and the number 1 are not interchangeable.
- ❖ The uppercase O (oh) and the number 0 are not interchangeable.
- ❖ The Caps Lock key changes only the alphabet keys to uppercase—the number and symbol keys are not affected. The light on the Caps Lock key glows when you press the Caps Lock key.

Making your keyboard emulate a full-size keyboard

Although your computer's keyboard layout is compatible with a standard full-size keyboard, it has fewer keys.

A standard full-size keyboard has two Enter, Ctrl, and Alt keys; editing keys; cursor positioning keys; and a numeric keypad. Pressing the Fn key simultaneously in combination with one of the specially marked keys allows you to emulate a full-size keyboard.

Your computer's keyboard has only one Enter and one Ctrl key. Most of the time, this does not matter. However, some programs assign separate functions to the right and left Ctrl and Alt keys, or to the regular and numeric pad Enter keys on the full-sized keyboard. Using the Fn key you can simulate these separate keys, as follows:

- ❖ Press Fn and Ctrl simultaneously to simulate the Ctrl key on the right side of the enhanced keyboard.
- ❖ Press Fn and Enter simultaneously to simulate the Enter key on the numeric pad of the enhanced keyboard.

Ctrl, Fn and Alt keys

Sample Ctrl, Fn and Alt keys

The Ctrl, Fn and Alt keys do different things depending on the program you are using. For more information, see your program documentation.

Function keys

Sample function keys

The function keys (not to be confused with the Fn key) are the 12 keys at the top of the keyboard. They are called function keys because they run programmed functions determined by the application you are using. For more information, see your program documentation.

Hot keys

When used in combination with the Fn key, function keys marked with icons run programmed functions specific to your computer. For more information, see [“Hot Keys” on page 250](#).

Windows® special keys

Sample Windows® special keys

The keyboard provides two keys that have special functions:

- ❖ The **Start key** opens the Start menu.
- ❖ The **Application key** has the same function as the secondary (or right mouse) control button.

Overlay keys

Sample keyboard overlay keys

The keys with numbers and symbols on them form the numeric and cursor overlay. This overlay lets you enter numeric data or control the cursor as you would using the 10-key keypad on a full-size keyboard.

Using the overlay to type numeric data

The keys with the numbers on their lower right corners are the numeric overlay keys.

To turn the numeric overlay on, press Fn and F11 simultaneously. The numeric mode light on the keyboard indicator panel glows when the numeric overlay is on.

To turn off the numeric overlay, hold down the Fn key and press F11 again. The numeric mode light on the keyboard indicator panel goes out.

Using the overlay for cursor control

To turn the cursor control overlay on, press Fn and F10 simultaneously. The cursor control mode light on the keyboard indicator panel glows when the cursor control overlay is on.

To turn off the cursor control overlay, hold down the Fn key and press F10 again. The cursor control mode light on the keyboard indicator panel goes out.

Saving your work

Before you turn off the computer, save your work on the hard disk drive or a diskette.

CAUTION

Always save your data even when you are using Standby mode. If your battery fully discharges, your information will be lost. Your computer can be configured to warn you when the battery is running low, see [“Setting battery alarms” on page 123](#).

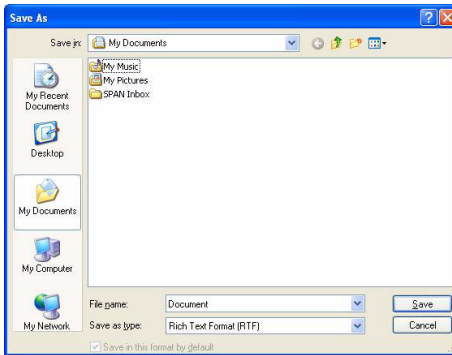

Many programs offer a feature that saves documents at regular intervals. Check your program’s documentation to see if it has an automatic save feature.

Saving files

- 1 On the **File** menu of your Windows program, click **Save**.

If you are working with a document that already has a file name, this is all you need to do. If you created a new document, your program displays a Save As dialog box.

Use this dialog box to specify where to store the document and to give it a file name.

Sample Save As dialog box

- 2 Choose the drive and folder where you want your file to be stored.
- 3 Type a file name, then click **Save**.

HINT: To make another copy of the file you are currently working with, choose Save As from the File menu and give the new file a different name.

File names

The Windows XP operating system supports long file names which can contain up to 255 characters and can include spaces. Some applications do not support long file names and require file names limited to no more than eight characters.

You may use all the letters and numbers on the keyboard plus these characters: _ ^ \$ ~ ! # % & { } () @ and '. File names are not case-sensitive.

Using a file extension

Most programs assign an extension to the file name that identifies the file as being created in the program with a particular format. For example, Microsoft Word saves files

with a .doc extension. Any file name with an extension of “.doc” is assumed to be a Microsoft Word file. Creating your own extension is usually unwise, since the program is unlikely to recognize a strange extension and may refuse to handle your file correctly.

TECHNICAL NOTE: By default, the Windows® XP operating system does not show file extensions. For information on showing or hiding file extensions, see your Windows® XP online help.

Printing your work

Verify that the Windows® XP operating system is set up for your printer as described in [“Connecting a printer” on page 76](#).

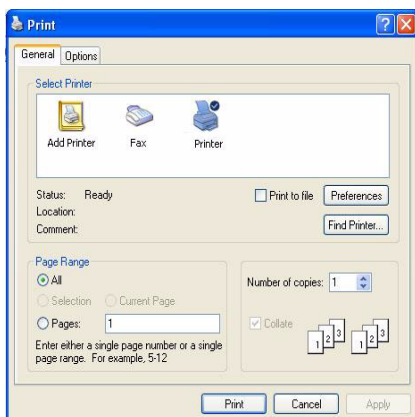

TECHNICAL NOTE: You only need to set up the printer the first time you connect it. If you use more than one printer or are changing printers, you will need to set up the operating system to run with the additional printer(s).

To print a file:

- 1 If your printer is not on, turn it on.
- 2 Open the **File** menu of your Windows program and click **Print**.

The program displays a Print dialog box.

Sample Print dialog box

- 3 Specify the print parameters. For example, the range of pages and number of copies to print.
- 4 Click **Print**.

Backing up your files

Back up all the files you create in case something happens to your computer. You can back up your files to different types of media such as CDs, DVDs, diskettes, or to a network, if available.

To back up several files at one time, use the Microsoft® Windows® backup program preinstalled on the computer's hard disk. Also see [“Backing up your data to CDs with Windows XP”](#) on page 242.

- 1 Attach an optional external drive to one of the USB ports.
- 2 Insert the media into the appropriate drive.
- 3 Click **Start**, then click **My Computer**.
- 4 Double-click the drive that contains the file you want to copy.

-
- 5 Double-click the folder that contains the file, then click the file you want to copy.

TECHNICAL NOTE: You can use the Ctrl or Shift keys to select more than one file. To select multiple consecutive files, hold down the Shift key and click the first and then the last file (all files within that range will be highlighted). To select non-consecutive files, hold down the Ctrl key and click the individual files you want to select.

- 6 Right-click, select **File**, then click **Send To**.
- 7 Click the icon for the destination device.

For information on special Windows XP capabilities related to backing up and restoring data, see [“Data and system configuration backup in Windows XP”](#) on page 240.

Restoring your work

To restore information from your backup media to your hard disk, use the Restore page in the backup program. Look in the online Help or your operating system documentation for information on restoring files.

Connecting an external DVD-ROM/multi-function drive

Some operations require an external optical media drive (DVD-ROM drive or multi-function drive).

NOTE An external DVD-ROM/CD-RW drive is included with the Portégé R205 only.

For the Portégé R200, you can purchase an optional external optical media drive from Toshiba's Web site at accessories.toshiba.com.

Sample external DVD-ROM/multi-function drive

To connect an external USB DVD-ROM or multi-function drive, connect the cable to one of the USB ports.

Playing audio

Insert an audio CD into the optional external DVD-ROM/multi-function drive and close the disc tray.

The computer automatically detects a disc in the drive and opens the Audio CD window. To play an audio CD select the Play Audio CD using Windows Media® Player option and click OK.

Sample Audio CD window

The Windows Media® Player window appears.

Sample Windows Media Player screen

The Windows Media® Player control panel works much like an ordinary compact disc player:

- ❖ To play the CD or to pause, click the **Play/Pause** button on the CD Player control panel.

-
- ❖ To stop the CD, click the **Stop** button.
-

CAUTION

Before putting on headphones to listen to an audio CD, turn the volume dial down, and do not set the volume too high when using the headphones. Continuous exposure to loud sound can harm your hearing.

Playing DVDs

If you are using an optional external DVD-ROM or multi-function drive, you can watch DVD movies using the InterVideo WinDVD™ application.

To install the WinDVD application, use the Toshiba Application Installer on the Windows desktop.

To install the WinDVD application:

- 1 Double-click the **Toshiba Application Installer** icon on your computer's desktop.
- 2 Select "Install Applications and Drivers."
- 3 Select "InterVideo WinDVD" as the item you wish to install.
- 4 Click install and follow any on-screen prompts to complete the installation.

TECHNICAL NOTE: Your DVD-ROM or multi-function drive is set to play region 1 (North America) DVD-ROMs. If you play a DVD disc from another region, the drive will automatically change to play in the format of the other region. The drive will allow you to change regions four times. On the fourth change, the region will be "locked in." That is, the drive will only play DVDs from that last region. Note that changing from region 1 to region 2 and back to region 1 is counted as two changes.

NOTE

For optimum DVD performance, it is recommended that you play DVDs while running the computer on AC power. In addition, your computer's Power Saver utility can be used to select a power level setting for DVD playback.

Powering down the computer

CAUTION

Pushing the power button before shutting down the Windows[®] operating system could cause you to lose your work. Make sure the system indicator panel's disk light and the drive-in-use light are off. If you turn off the power while a disk is being accessed, you may lose data or damage the disk and/or drive.

When you power down the computer, you have a number of options to choose from:

- ❖ Turn Off or Shut down, which power off the computer.
- ❖ Hibernation, which saves the current operating state to the hard disk and powers off the computer
- ❖ Standby, which saves the current operating state to memory and enters a low power mode
- ❖ Restart, which restarts the computer

Each option has its advantages.

TECHNICAL NOTE: Before using any of these options to power down your computer, save your files and make sure the disk activity lights are off.

If you change your mind and decide to continue working after all, wait a few seconds before turning the computer on again.

all, wait a few seconds before turning the computer on again.

Turn Off or Shut down command

The Turn Off or Shut down commands power off the computer. The Windows[®] XP Professional operating system uses Turn Off if you are not connected to a Windows[®] network server (domain server). It uses Shut down if you are connected to a Windows[®] network server (domain server).

Factors to consider when choosing Turn Off or Shut down:

- ❖ No power is used while the computer is turned off. This is the most efficient mode if you will be away from your computer for an extended time.
- ❖ Restarting from Turn Off or Shut down uses the most time and battery power.
- ❖ When starting up again, the system does not automatically open the programs and files you were previously using.

Restart command

Restart is the same as Turn Off or Shut down but automatically powers up the computer. Use it when you need to reload the operating system, for example to activate changes to system settings.

Hibernation command

The Hibernation command powers off the computer, but it first saves the current state of the computer to the hard disk. Since Hibernation does not require power to maintain the saved information, the system settings are retained indefinitely. Restoring information from the hard disk takes longer than restoring it from memory. When you start up again, the computer runs a self-test, loads the operating system, and then returns to the state in which you left it.

Factors to consider when choosing Hibernation:

- ❖ While in Hibernation mode, the computer uses no battery power.
- ❖ Because the state of the system is held on the hard disk, no data is lost if the battery discharges while the computer is in Hibernation mode.
- ❖ When starting up again, this choice uses less time and battery power than the Turn Off or Shut down option. But it uses a little more time and battery power to start up than the Standby option, because information is being retrieved from the hard disk instead of from memory.
- ❖ On restarting, the computer returns to the state in which you left it, and opens all the programs and files you were using.

Standby command

The Standby command puts the computer into a power-saving mode. Standby stores the current state of the computer in memory so that, when you restart the computer, you can continue working from where you left off.

Factors to consider when choosing Standby:

- ❖ While in Standby mode, the computer uses some battery power. If your computer is left in Standby mode for an extended period, your computer could lose data.

- ❖ When starting up again, this choice uses less time and battery power than either Turn Off, Shut down or Hibernation.
- ❖ On restarting, the computer returns to the state in which you left it, and opens all the programs and files you were using.

CAUTION

If you power down using the Standby command and the battery discharges fully, your unsaved information will be lost. Be sure to save your work often.

Using Turn Off or Shut down

If you are not connected to a Windows® network server (domain server), power off the computer as follows:

To turn off the computer.

- 1** Click **Start, Turn off computer**.

The Turn off computer window appears.

Sample Turn off computer window

- 2** Click **Turn Off**.

The computer turns itself off.

If you are connected to a Windows® network server (domain server), power off the computer as follows:

NOTE

The computer can be connected to a Windows® network server (domain server) using Windows® XP Professional only.

- 1 Click the **Start** button, then **Shut down**.

The Shut Down window appears.

- 2 Select **Shut down** from the drop-down list.

- 3 Click **OK**.

The computer shuts down completely.

Turning off more quickly

In addition to the method described above, you can turn off the computer by pressing the power button.

To use this method, you first need to turn on the feature in TOSHIBA Power Saver.

- 1 Click **Start, Control Panel**.

The Control Panel window appears.

- 2 Click **Performance and Maintenance**.

- 3 Click the **TOSHIBA Power Saver** icon.

The TOSHIBA Power Saver Properties window appears.

- 4 Click on the **Setup Action** tab.

Sample TOSHIBA Power Saver Properties window

- 5 Select the options you want from the drop-down lists.

❖ **When I press the power button**

Set this option to **Shut down** if you want the computer to turn off when you press the power button.

❖ **When I close the lid**

Set this option to **Shut down** if you want the computer to turn off when you close the display panel.

- 6 Click **Apply**.
- 7 Click **OK** to close the TOSHIBA Power Saver Properties window, then close the Control Panel.

Starting again after Turn Off or Shut down

To start the computer up again, press and release the power button; the on/off light changes to blue.

Using Hibernation

Enabling the Hibernation command

Hibernation is a default setting. If it should become disabled, you can enable it as follows:

- 1 Click **Start, Control Panel**.

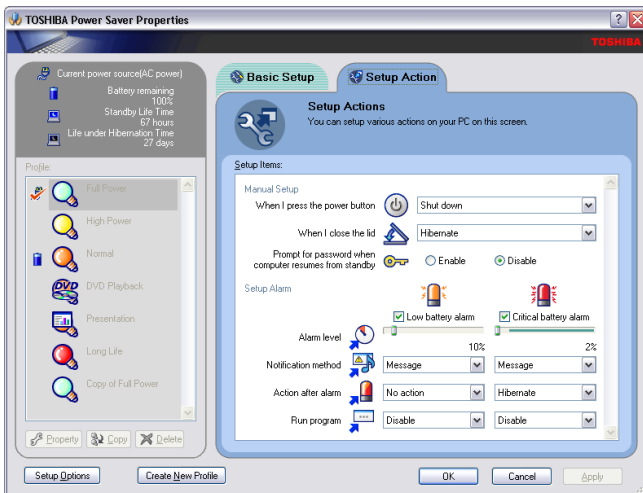

The Control Panel window appears.

- 2 Click **Performance and Maintenance**.

- 3 Click the **TOSHIBA Power Saver** icon.

The TOSHIBA Power Saver Properties window appears.

- 4 Click on the **Setup Action** tab.

Sample TOSHIBA Power Saver Properties window

- 5 Select the options you want from the drop-down lists.

❖ When I press the power button

Set this option to **Shutdown** if you want the computer to turn off when you press the power button.

❖ **When I close the lid**

Set this option to **Shutdown** if you want the computer to turn off when you close the display panel.

6 Click **Apply**.

7 Click **OK** to close the TOSHIBA Power Saver Properties window, then close the Control Panel.

Going into Hibernation mode

If you are not connected to a Windows® network server (domain server), power off the computer using the Hibernation command as follows:

1 Click **Start, Turn off computer**.

The Turn off computer window appears.

Sample Turn off computer window with shift key held down to show Hibernate option

2 Hold down the shift key and click **Hibernate** (“Hibernate” only appears when the shift key is pressed).

The computer saves the state of the system, including all open programs and files, to the hard disk, and then powers down completely.

If you are connected to a Windows® network server (domain server), follow these steps to power down the computer using Hibernation:

NOTE

The computer can be connected to a Windows® network server (domain server) using Windows® XP Professional only.

- 1 Click **Start**, then **Shut Down**.

The Shut Down window appears.

- 2 Select **Hibernate** from the drop-down list of options.
- 3 Click **OK**.

The computer saves the state of the system, including all open programs and files, to the hard disk, and then powers down completely.

Going into Hibernation mode more quickly

You can also put the computer into Hibernation mode in three ways:

- ❖ By pressing the hotkey combination Fn+F4.
- ❖ By pressing the power button.
- ❖ By closing the display panel.

Starting again from Hibernation

Use these instructions to restart the computer when you enter Hibernation mode by closing the display panel:

- ❖ When using AC power, open the display panel.
- ❖ When using battery power, open the display panel.

The computer returns to the screen you were previously using.

Using Standby

If you are not connected to a Windows® network server (domain server), power down the computer using the Standby command as follows:

- 1 Click **Start, Turn off computer.**

The Turn off computer window appears.

Sample Turn off computer window with Stand By option

- 2 Click **Stand By.**

The computer saves the state of all open programs and files to memory, turns off the display, and goes into a low-power mode. The on/off light (⏻) blinks amber indicating the machine is in Standby mode.

If you are connected to a Windows® network server (domain server), power down the computer using the Standby command as follows:

NOTE

The computer can be connected to a Windows® network server (domain server) using Windows® XP Professional only.

- 1 Click the **Start** button, then select **Shut down.**

The Shut Down window appears.

- 2 Select **Stand by** from the drop-down list of options.
- 3 Click **OK.**

The computer saves the state of all open programs and files to memory, turns off the display, and goes into a low-power mode. The on/off light blinks amber to indicate the machine is in Standby mode.

CAUTION

If you power down using the Standby command and the battery discharges fully, your unsaved information will be lost. Be sure to save your work often.

Going into Standby mode more quickly

You can also put the computer into Standby mode in three ways:

- ❖ By pressing the hot key combination Fn+F3
- ❖ By pressing the power button
- ❖ By closing the display panel

To put the computer into Standby mode when you press the power button or close the display panel, you must preset the mode:

1 Click **Start, Control Panel**.

The Control Panel window appears.

2 Click **Performance and Maintenance**.

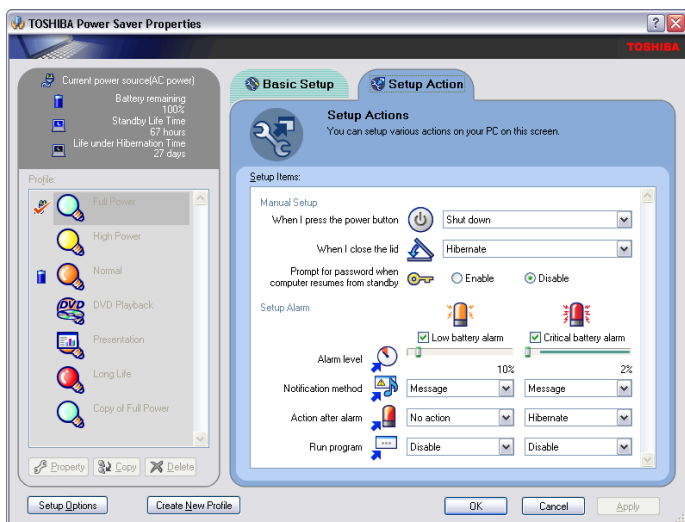

3 Click the **TOSHIBA Power Saver** icon.

The TOSHIBA Power Saver Properties window appears.

4 Click on the **Setup Action** tab.

112 Learning the Basics

Using Standby

Sample Full Power Properties window

5 Select **Standby** for the options you want.

❖ **When I press the power button**

Set this option to Standby so that the computer will go into Standby mode when you press the power button.

❖ **When I close the lid**

Set this option to Standby so that the computer will go into Standby mode when you close the display panel.

❖ **When the system standby time has passed**

Set this option to Standby if you want the computer to automatically go into Standby mode when you have not used it for a specified amount of time. You can set the System standby time on the Power Save Mode tab.

6 Click **Apply**.

Click **OK** to close the TOSHIBA Power Saver Properties window, then close the Control Panel.

Starting again from Standby

Use these instructions to restart the computer when you enter Standby mode by closing the display panel:

- ❖ When using AC power, open the display panel.
- ❖ When using battery power, open the display panel.

The computer returns to the screen you were previously using.

Chapter 3

Mobile Computing

This chapter covers all aspects of using your computer while traveling.

Toshiba's energy-saver design

Your computer enters a low-power suspension mode when it is not being used, thereby conserving energy and saving money in the process. It has a number of other features that enhance its energy efficiency.

Many of these energy-saving features have been set by Toshiba. We recommend you leave these features active, allowing your computer to operate at its maximum energy efficiency, so that you can use it for longer periods while traveling.

Running the computer on battery power

The computer contains a removable Lithium-Ion (Li-Ion) high-capacity battery that provides power when you are away from an AC outlet. You can recharge it many times.

Battery Notice

Battery life may vary considerably from specifications depending on product model, configuration, applications, power management settings and features utilized, as well as the natural performance variations produced by the design of individual components. Published battery life numbers are achieved on select models and configurations tested by Toshiba at the time of publication. See "Detailed Specs" for specific battery measurement test. Recharge time varies depending on usage. Battery may not charge while the computer is consuming full power.

After a period of time, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is normal for all batteries. To purchase a new battery pack, see the accessories information that shipped with your computer or visit the Toshiba web site at www.accessories.toshiba.com.

To ensure that the battery maintains its maximum capacity, operate the computer on battery power at least once a month until the battery is fully discharged. Please see “[Maximizing battery life](#)” on page 129 for procedures. If the computer is continuously operated on AC power, either through an AC adapter or a docking station (if applicable to your system), for an extended period (more than a month), the battery may fail to retain a charge. This may shorten the life of the battery, and the battery light may not indicate a low-battery condition.

NOTE

For optimum DVD performance, it is recommended that you play DVDs while running the computer on AC power. In addition, your computer's Power Saver utility can be used to select a power level setting for DVD playback.

The computer also has an internal real-time-clock (RTC) battery.

The RTC battery powers the RTC memory that stores your system configuration settings and the current time and date information. It maintains this information for up to a month while the computer is turned off.

TECHNICAL NOTE: The RTC battery does not charge while the computer is turned off, even when AC power is attached.

The RTC battery charges when the computer is powered on.

Power management

Your computer ships with the power management options preset to a configuration that will provide the most stable operating environment and optimum system performance for both AC power and battery modes.

CAUTION

Changes to these settings may result in system performance or stability issues. Users who are not completely familiar with the power management component of the system should use the preset configuration. For assistance with setup changes, contact Toshiba's Global Support Centre.

Using additional batteries

In addition to the main battery, you may also have an optional second battery (not included with your computer). If you travel and need to work for many hours without an AC power source, you may purchase a battery module for use in the computer, or carry additional charged battery packs with you. You can then replace a discharged battery and continue working.

For more information on batteries and accessories, see accessories.toshiba.com.

Charging batteries

The battery needs to be charged before you can use it to power the computer.

CAUTION

Never leave batteries in the battery charger for more than a week at a time. Doing so may reduce the potential charge of the battery.

Use only battery chargers designed to work with your notebook computer. You can order a Toshiba battery charger from Toshiba's Web site at accessories.toshiba.com.

NOTE

Battery charge time may vary depending on the applications, power management settings, and features used.

Charging the main battery

To charge the main battery while it is in your computer, plug the computer into a live electrical outlet. The battery charges whether the computer is on or off.

TECHNICAL NOTE: When your computer is using all of the power provided by the AC adapter to run applications, features, and devices, the recharging of the battery cannot occur. Your computer's Power Saver utility can be used to select a power level setting that reduces the power required for system operation and will allow the battery to recharge.

The battery may not start charging immediately under the following conditions:

- ❖ The battery is extremely hot or cold.

To ensure that the battery charges to its full capacity, wait until it reaches room temperature (50 to 80 degrees Fahrenheit, 10 to 26 degrees Celsius).

- ❖ The battery is almost completely discharged.

Leave the power connected and the battery should begin charging after a few minutes.

HINT: Once the battery is fully charged, we recommend that you operate your computer on battery power until the battery discharges completely. Doing this extends battery life and helps ensure accurate monitoring of battery capacity.

Charging the RTC battery

Your computer has an internal real-time clock (RTC) battery. The RTC battery powers the System Time Clock and BIOS memory used to store your computer's configuration settings. When fully charged, it maintains this information for up to a month when the computer is powered off.

The RTC battery may have become completely discharged while your computer was shipped, resulting in the following error message during startup:

```
BAD RTC BATTERY  
BAD CHECKSUM (CMOS)  
CHECK SYSTEM
```

NOTE

The above error message may vary by computer model.

The RTC battery does not charge while the computer is turned off even when the AC adapter is charging the computer. The RTC battery charges when the computer is powered on.

If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date, or stop working.

To recharge the RTC battery, plug the computer into a live electrical outlet and leave the computer powered on for 24 hours.

NOTE

It is seldom necessary to charge the RTC battery because it charges while the computer is on. If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date or stop working.

When Hibernation mode is enabled and the RTC battery is completely discharged, a warning prompts you to reset the real-time clock.

The computer can be used while the RTC battery is being charged, although the charging status of the RTC battery cannot be monitored.

Monitoring main battery power

The computer's main battery light gives you an indication of the main battery's current charge:

- ❖ Glows amber while the main battery is being charged (AC adapter connected).
- ❖ Glows blue when the main battery is fully charged.

-
- ❖ Is unlit when the battery has discharged, the battery is not charging, or the AC adapter is not plugged into the computer or AC outlet.

NOTE

Battery life and charge time may vary, depending upon power management settings, applications and features used.

- ❖ Flashes amber when the main battery charge is low and it is time to recharge the main battery or plug in the AC adapter.

NOTE

If the AC power light flashes amber during charging, either the battery pack is malfunctioning, or it is not receiving correct input from the AC power supply.

Disconnect the AC cable and remove the battery pack. See [“Changing the main battery” on page 126](#) for information on replacing the main battery.

HINT: Be careful not to confuse the battery light (□), the on/off light (⬢), and the power button light (above the keyboard).

When the on/off light or power button light flashes amber, it indicates that the system is suspended (using Windows® XP Standby command).

Sample power and battery light locations

Determining remaining battery power

NOTE

Wait at least 16 seconds after turning on the computer before trying to monitor the remaining battery power. The computer needs this time to check the battery's remaining capacity and perform its calculations.

- 1 Click **Start, Control Panel, Performance and Maintenance**, and then **Toshiba Power Saver**.
- 2 Click the **Toshiba Power Saver** icon.
- 3 The Power Saver Properties window appears.

The remaining battery charge is indicated on the left side of the dialog box.

With repeated discharges and recharges, the battery's capacity gradually decreases. A frequently used older battery does not

power the computer for as long as a new battery, even when both are fully charged.

TECHNICAL NOTE: The computer drains the battery faster at low temperatures. Check your remaining charge frequently if you are working in temperatures below 50 degrees Fahrenheit.

The computer calculates the remaining battery charge based on your current rate of power use and other factors such as the age of the battery.

What to do when the main battery runs low

When the main battery runs low you can:

- ❖ Plug the computer into an external power source and recharge the main battery
- ❖ Place the computer into Hibernation mode and replace the main battery with a charged spare
- ❖ Connect the computer to an optional high capacity battery (if available for your computer)
- ❖ Save your work and turn off the computer

If you do not manage to do any of these things before the main battery completely runs out of power, the computer automatically enters Hibernation mode and turns itself off. Hibernation mode keeps track of where you were, so that when you turn on the power again, you can continue where you left off.

If you have Hibernation mode enabled (the default), the computer copies the details of your open programs and files to the hard disk before shutting down. For more information on using Hibernation, see [“Hibernation mode” on page 254](#).

Setting battery alarms

You can set two alarms. Each alarm can be set to alert you when a specified percentage of remaining battery power has been reached. You can set how the warning occurs: sound an alarm, display a message, both, or none. You can also set the computer to enter Standby mode or Hibernation mode or to completely power down when the alarm goes off.

To change the default alarm settings:

- 1 Click **Start, Control Panel, Performance and Maintenance**, and then **Toshiba Power Saver**.
- 2 Click the **Setup Action** tab.
- 3 Configure the **Alarm settings** to suit your needs.

Conserving battery power

How long a fully charged battery pack lasts when you are using the computer depends on a number of factors, such as:

- ❖ How the computer is configured
- ❖ How much you use the hard disk, DVD-ROM or multi-function drive, diskette drives, or other optional devices
- ❖ Where you are working, since operating time decreases at low temperatures

There are various ways in which you can conserve power and extend the operating time of your battery:

- ❖ Enable Standby or Hibernation, which saves power when you turn off the computer and turn it back on again
- ❖ Use Toshiba's power-saving options

These power-saving options control the way in which the computer is configured. By using them, you can greatly increase the length of time you can use the computer before you need to recharge the battery.

Toshiba has combined these options into preset Power Profiles. Using one of these profiles lets you choose between maximum power savings and peak system performance. You may also set individual power-saving options to suit your own needs.

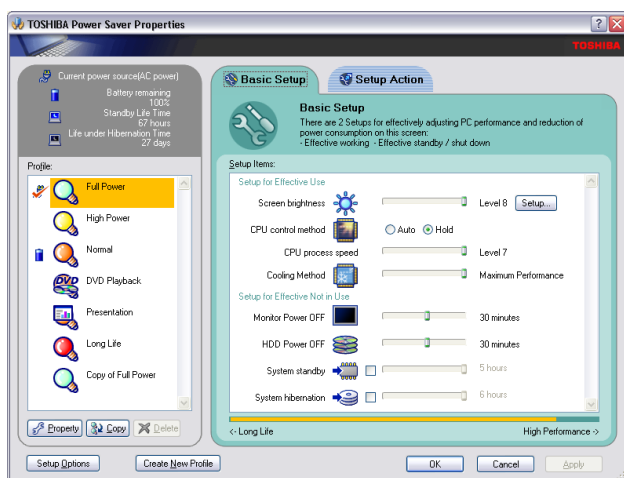

The following sections describe how to choose a Power Profile and discuss each power-saving option.

Power Profiles

You can choose a predefined Power Profile or select your own combination of power management options. To do this:

- 1 Click **Start, Control Panel, Performance and Maintenance**, and then **Toshiba Power Saver**.

The TOSHIBA Power Saver Properties window appears.

Sample TOSHIBA Power Saver Properties window

- 2 Select an appropriate profile for your work environment or create your own custom profile.

By changing the options that appear in the Power Saver Properties dialog box and clicking **OK**, you can reconfigure that function.

You may choose a power-saving management strategy to best suit your computing needs. If you are running on batteries and the programs that you are using do not require a lot of system resources, you may experience longer work sessions by enabling the Normal setting. Any options that you change become the active settings when you exit the program. (You do not have to restart your system before they become active settings.)

For more information, see [“TOSHIBA Power Saver” on page 169](#).

Using a hot key to set the Power Profile

You may use a hot key to set the Power Profile.

To set the Power Profile:

- 1 Press Fn and F2 simultaneously to display the Power Profile pop-up window.

Sample Power Profile mode pop-up window

- 2 While continuing to press Fn, press F2 until you select the desired Power Profile.

The Power Profile options are: Full Power, High Power, Normal, DVD Playback, Presentation, and Long Life.

- 3 Release the Fn key.

The pop-up window disappears. You are now in the selected mode.

For more information on setting the battery Power Profile, see [“TOSHIBA Power Saver” on page 169](#).

Changing the main battery

▲ WARNING

Never short circuit the battery pack by either accidentally or intentionally bringing the battery terminals in contact with another conductive object. This could cause serious injury or fire, and could also damage the battery pack.

▲ WARNING

Never expose a battery pack to abnormal shock, vibration or pressure. The battery pack's internal protective device could fail, causing it to overheat or ignite, resulting in caustic liquid leakage, or explosion or fire, possibly resulting in death or serious injury.

When your main battery has run out of power, you have two options: plug in the AC Adapter or install a fresh main battery.

TECHNICAL NOTE: To avoid losing any data, save your files and then either completely shut down your computer, or put it into Hibernation mode before changing the main battery.

Removing the battery from the computer

- 1 Save your work.
- 2 Power off the computer or place it in Hibernation mode according to the instructions in [“Using Hibernation” on page 107](#).
- 3 Remove all cables connected to the computer, including the AC adapter.
- 4 Close the display panel and turn the computer upside down with the front of the computer facing you.

- 5 Slide the battery release latch to release the battery.
- 6 Pull the discharged battery out of the computer.

Sample removing the battery

⚠ WARNING

If the battery is leaking or its case is cracked, put on protective gloves to handle it, and discard it immediately. Always dispose of used battery packs in compliance with all applicable laws and regulations. Put insulating tape, such as cellophane tape, on the electrode during transportation to avoid a possible short circuit, fire or electric shock. Failure to do so could possibly result in serious injury.

Inserting a charged battery

- 1 Wipe the terminals of the charged battery with a clean cloth to ensure a good connection.
- 2 Insert the charged battery into the slot until the latch clicks.

The battery pack has been designed so that you cannot install it with reverse polarity.

CAUTION

If the battery does not slide into the slot easily, move the battery release lock to the unlocked position and try again. Do not force the battery into position.

*Sample inserting the battery*

- 3 Turn the computer right side up.
- 4 Reconnect any cables that were removed in step 3 of “[Removing the battery from the computer](#)” on page 126.
- 5 Restart the computer.

Taking care of your battery

The following sections offer tips on how to take care of your battery and prolong its life.

Safety precautions

- ❖ If the battery pack produces an odor, overheats or changes color or shape while it is being used or charged, turn off the computer’s power immediately and disconnect the power cord from the power socket. Carefully remove the battery pack from the computer.

- ❖ Do not try to disassemble a battery pack.
- ❖ Do not overcharge or reverse charge a battery. Overcharging will shorten its life, and reverse charging could damage it.
- ❖ Avoid touching the metal terminals of the battery with another metal object. Short-circuiting the battery can cause it to overheat and may cause damage to the battery or the computer.
- ❖ Do not incinerate a spent battery, as this could cause it to explode and release toxic materials.
- ❖ If a battery is leaking or damaged, replace it immediately. Use protective gloves when handling a damaged battery.
- ❖ To replace the main battery, use an identical battery that you can purchase through the Toshiba Web site at accessories.toshiba.com.
- ❖ A reverse polarity condition should be avoided with all batteries. The main battery is designed so that it cannot be installed in reverse polarity.
- ❖ Charge the battery only in the computer or in a battery charger designated as an approved option.
- ❖ When you install the battery pack, you should hear a click when it is seated properly.
- ❖ Do not expose the battery pack to fire. The battery pack could explode.

Maximizing battery life

To maximize the life of your battery pack:

- ❖ At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps below:
 - 1 Turn off the computer's power.

- 2 Disconnect the AC adapter and turn on the computer's power. If it does not turn on, go to step 4.
 - 3 Operate the computer on battery power for five minutes. If the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged. If the battery light flashes or there is some other warning to indicate a low battery, go to step 4.
 - 4 Connect the AC adapter to the computer and the power cord to a power outlet. The DC-IN or AC power-light should glow blue, and the battery light should glow amber to indicate that the battery pack is being charged. If the DC-IN or AC power-light indicator does not glow, power is not being supplied. Check the connections for the AC adapter and power cord.
 - 5 Charge the battery pack until the battery light glows blue.
- ❖ If you have extra battery packs, rotate their use.
 - ❖ If you will not be using the system for an extended period, more than one month, remove the battery pack.
 - ❖ Disconnect the AC adapter when the battery is fully charged. Overcharging makes the battery hot and shortens its life.
 - ❖ If you are not going to use the computer for more than eight hours, disconnect the AC adapter.
 - ❖ Store spare battery packs in a cool dry place out of direct sunlight.

Disposing of used batteries

The life of a battery pack depends on usage. When the battery pack needs replacing, the main battery light flashes amber shortly after you have fully recharged the battery.

You must discard a battery if it becomes damaged.

⚠ WARNING

Never attempt to dispose of a battery pack by burning or by throwing it into a fire, and never allow exposure to a heating apparatus (e.g., microwave oven). Heat can cause a battery pack to explode and possibly cause serious injury.

Always dispose of used battery packs in compliance with all applicable laws and regulations. Put insulating tape, such as cellophane tape, on the electrode during transportation to avoid a possible short circuit, fire or electric shock. Failure to do so could possibly result in serious injury.

⚠ WARNING

Always use the battery pack supplied as an accessory or an equivalent battery pack specified in the User's Manual. Other battery packs have different voltage and terminal polarities. Use of non-conforming battery packs could generate smoke or cause fire or rupture, possibly resulting in serious injury.

After repeated use, the batteries will finally lose their ability to hold a charge and you will need to replace them. Under certain applicable laws and regulations, it may be illegal to dispose of old batteries by placing them in the trash.

Please be kind to our shared environment. Check with your local government authority for details regarding where to recycle old batteries or how to dispose of them properly. If you cannot find the information you need elsewhere, call Toshiba at: (800) 457-7777.

Traveling tips

The environmental precautions listed in “[Selecting a place to work](#)” on page 43, also apply while traveling.

- ❖ Never leave your computer on a sunny ledge or in a place where it could get wet or covered in dust.
- ❖ Always travel with the computer in a carrying case. Toshiba offers a choice of carrying cases for the computer. They all provide plenty of extra space for manuals, power cords/cables, and compact discs. Contact your authorized Toshiba representative for more information.

TECHNICAL NOTE: When traveling by air, you may be required to pass your notebook through airport security equipment. The X-ray equipment will not harm your computer.

NOTE

Before using your computer aboard an aircraft, make sure the Wi-Fi switch is set to the Off position if your computer has wireless LAN capability.

Chapter 4

Expansion Options

Your computer is designed to work in your office as well as on the road. This chapter explains how to set up several optional external devices so that your notebook can provide all the convenience of a traditional desktop computer.

To order additional devices and accessories, see the accessories information provided with your computer, or visit accessories.toshiba.com.

Using your computer at the office

By connecting an external full-size keyboard, an external monitor, a mouse and a printer, you can work with your computer as if it were a standard office model. You can connect a monitor and USB-compatible devices, such as the keyboard, mouse and printer, directly to the computer, or to the optional Slim Port Replicator.

For information on connecting a mouse and a printer, see the “Getting Started” chapter on page 43.

If you want to connect your computer to the office network, you can use the LAN port or your wireless LAN (Wi-Fi) capability.

Using an expansion device

The expansion port is used to connect your computer to an expansion device. This is an excellent investment if you are using your computer both in and out of the office.

When you return to your desk, you can then connect to your network, print reports from your computer, or use a mouse instead of the TouchPad. Connecting cables for each of these devices every time you return to the office is time-consuming and inconvenient.

With an expansion device, you can leave external devices connected while you are using your computer away from your desk. When you return, you can quickly connect your computer and have immediate access to all the devices.

For more information, see the accessories information package that comes with the device or visit accessories.toshiba.com.

Optional Slim Port Replicator

The optional Slim Port Replicator enhances your mobility because it provides ports that enable you to connect to many expansion devices. The replicator provides more USB ports than the computer, enabling you to use more USB-compatible devices at the same time.

If you use the optional Slim Port Replicator, the only other computer port you can use at the same time is the modem port. This is because attaching the replicator makes every port except the modem port inaccessible.

Back of the optional Slim Port Replicator

The **LAN port** lets you connect the computer to a local area network using a 10/100 Ethernet link.

The **RGB (monitor) port** lets you connect an external monitor. For more information, see “[Using an external monitor](#)” on page 137.

Use the **Universal Serial Bus (USB) ports** to connect the optional external USB DVD/multi-function drive, diskette drive, or other USB peripherals.

You can connect the AC adapter to the **DC-IN** jack on the optional Slim Port Replicator.

Using the optional Slim Port Replicator

The optional Slim Port Replicator connects to the expansion port on the bottom of the computer. When the port replicator is attached and the power is on, a small light illuminates.

Attaching the optional Slim Port Replicator to the computer

- 1 Make sure the computer is turned off.
- 2 Unplug and remove any cables connected to the computer, including the AC adapter cord/cable.
- 3 Locate the expansion port on the bottom of the computer.
- 4 Holding the computer firmly, connect the expansion port on the bottom of the computer to the connection port on top of the optional Slim Port Replicator by pressing straight down.
- 5 Connect the replicator to a power source.

Connecting the optional external USB diskette drive

The optional external USB diskette drive allows you to use diskettes and is useful for installing software on the hard disk, exchanging information with other systems, and making backup copies of the files stored on your hard disk.

You can attach the optional external USB diskette drive to one of the USB ports on the back of the computer or to any of the USB ports on the optional Slim Port Replicator. You can also attach it while the computer is on.

Optional external USB diskette drive and connector cable

TECHNICAL NOTE: You may attach the optional external USB diskette drive while the computer is on or off.

If you attempt to access the drive when it is not attached to the computer, you will receive an error message.

To attach the optional external USB diskette drive cable to a USB port on either the computer or the optional Slim Port Replicator, gently push the connector into the USB port.

Attaching the optional diskette drive cable to one of the computer's USB ports

Using an external keyboard

If you prefer to use a standard keyboard, you can attach one to a USB port on the computer or on the optional Slim Port Replicator, provided the keyboard is USB-compatible.

Connecting a keyboard

You can connect a USB keyboard while the computer is on.

To connect the keyboard to the computer or the optional Slim Port Replicator, gently push the keyboard cable into the USB port.

Using an external monitor

If you prefer to use an external monitor, you can attach one to your computer's RGB (monitor) port or to the RGB (monitor) port on the optional Slim Port Replicator.

Connecting the monitor

- 1 If you are connecting the monitor to your computer or to the optional Slim Port Replicator, and the replicator is connected to your computer, turn off the computer.

NOTE Make sure the computer is off before you attach the monitor. Connecting a monitor with the computer's power on may damage the monitor, the computer, or both.

- 2 Connect the monitor's video cable to the RGB (monitor) port on the computer or the optional Slim Port Replicator.
- 3 Connect the monitor's power cable to a power source.
- 4 Turn on the external monitor.
- 5 Turn on the computer.

The computer will use the external monitor and disable the built-in display panel.

If your external monitor can display high-resolution video modes (greater than 800 x 600), you can take advantage of this feature by changing the video mode in Display Properties in the Control Panel.

Using both screens simultaneously

You can view information on the computer's built-in display and an external monitor simultaneously. The size of the display image on each screen depends upon the video mode.

To send information to both the built-in display panel and the external monitor:

- 1 Press Fn and F5 simultaneously.
- 2 While holding down Fn, press F5 repeatedly, pausing between each press, until you get the desired setting.

This hot key cycles through the settings in the following order: built-in display only, external monitor only, and simultaneous display.

- 3 Release the Fn key.

HINT: Simultaneous mode works only with external monitors that support 800 x 600 resolution and higher.

Connecting a mouse or a printer

For information on attaching a mouse or a printer, see [“Connecting a mouse” on page 76](#) or [“Connecting a printer” on page 76](#).

Using PC Cards

PC Cards are credit-card sized expansion cards that greatly increase the capabilities of your computer.

Some PC Cards combine several functions. Multi-function cards allow you to get the most out of your PC Card slot.

You may insert one Type I card or one Type II card into the computer's PC Card slot. This slot contains a spacekeeper insert to keep dust and dirt out of the computer. If you are not

using a PC Card, leave the insert in place. If you are using a PC Card, remove the insert and keep it in a safe place for future use.

Most PC Cards conform to the PCMCIA (Personal Computer Memory Card International Association) standard.

TECHNICAL NOTE: For PCMCIA-compatible PC Cards, check the package to make sure they conform to the PCMCIA 2.1 standard (or later). Other cards may work with your computer, but they are likely to be much more difficult to set up and use.

Hot swapping PC Cards

One of the great things about PC Cards is that you can replace one PC Card with another while the computer is on. This is called “hot swapping.”

DEFINITION: Hot swapping is the ability to change PC Cards while the computer is on.

Inserting a PC Card

Before inserting a PC Card, read the documentation that came with the card to see if it has any special requirements.

HINT: The operating system provides the Card and Socket Services software for your PC Card. Even if your PC Card comes with its own version of Card and Socket Services, you should use the files included in the operating system.

To install a PC Card:

- 1 Locate the PC Card slot on your computer.

Sample inserting a PC Card into the slot

- 2 Insert the PC Card in the slot.
- 3 When the card is almost all the way into the slot, push firmly, but gently, to ensure a good connection with the computer. do not force the card into position.

Hot swapping precautions

Although you can insert a PC Card at any time, remember not to remove a card while it is in use. Otherwise, you could lose valuable information.

For example:

- ❖ Never remove a hard disk card or CD-ROM drive card while the system is accessing the card.
- ❖ Never remove a network card while you are connected to the network.
- ❖ Never remove a SCSI card while any of the SCSI devices connected to it are operating.

DEFINITION: SCSI is an acronym for Small Computer Systems Interface. A single SCSI PC Card enables you to connect several SCSI devices to your computer at the same time.

Before removing a PC Card, stop it by clicking the **Safely Remove Hardware** icon in the system tray.

Removing a PC Card

- 1 Click the **Safely Remove Hardware** icon in the system tray.

Sample PC Card eject button

- 2 Press the PC Card eject button once to extend it, then press it again to remove the card.

The PC Card pops slightly.

Sample removing the PC Card from the slot

- 3 Grasp the edges of the PC Card and carefully slide it out of the slot.

Using a Secure Digital (SD™) card

Your computer supports the use of an SD media card.

Important: Do not use the **Copy Disk** function for SD cards. In order to copy data from one SD card to another, use the following procedure:

- 1 Format the target SD card in the same format as the source SD card.

- 2 Insert the source SD card.
- 3 Create a temporary folder on the hard disk drive.
- 4 Copy the contents of the source SD card into the temporary folder you created in step 3.
- 5 Remove the source SD card.
- 6 Insert the target SD card created in step 1.
- 7 Copy the file contents from the temporary folder to the target SD card.
- 8 Eject the target SD card.

NOTE

MMC cards (multimedia cards) do not work in this slot.

Inserting an SD™ card

Locate the SD card slot on the left side of the computer.

- 1 Turn the card so that the contacts (metal areas) are face down.

Sample location of the SD card slot

- 2 Push the card into the slot until it locks in place.

Sample inserting an SD Card into the slot

Removing an SD™ card

- 1 Click the **Safely Remove Hardware** icon in the system tray.
- 2 Click **Safely Remove SD Memory Card Drive - Drive (D:)**.
- 3 When the message displays that it is safe to remove hardware, press the card inward to release it.
The card pops out slightly.
- 4 Lift the left side of the computer, grasp the card, and pull it straight out.

Sample removing an SD Card from the slot

Chapter 5

Exploring Your Computer's Features

In this chapter, you will explore other features of your notebook computer.

Windows® XP special features

The Windows® XP Professional operating systems offers you several new features and enhancements, including:

- ❖ New system file protection
- ❖ A system restore function, allowing you to rollback the system to its previous mode
- ❖ An improved help center, support automation, and automatic Windows® operating system update
- ❖ Wizards to simplify setting up your home network
- ❖ Ability to share one Internet connection among multiple PCs
- ❖ An automatic discovery feature that allows your computer to detect new and intelligent devices

Personalizing your desktop

Your desktop is your virtual workspace. This section explains how to customize its features for the way you like to work. You can customize the following aspects of the desktop:

- ❖ Taskbar—which resources to display for quick access
- ❖ Web content interface—what information from the Internet to always display
- ❖ Desktop style—how windows are displayed and how to browse folders and files
- ❖ Toolbars—what information appears at the top of each window

NOTE

The procedures described in this user's guide assume that the default setup for Windows is in effect. If you make any of the changes described in this section, the instructions, sample screens, and steps listed elsewhere in this user's guide may differ slightly from your computer's settings.

Customizing the taskbar

As you work, the taskbar changes to reflect what you are doing. Its icons provide shortcuts to programs, documents, files, folders, system features, and components. Open applications also have Forward and Backward buttons to allow navigation through folders, documents, and Web sites.

For example, you can personalize the taskbar to include Quick Launch icons, and also your favorite URL addresses or local folders and programs.

DEFINITION: URL stands for Uniform Resource Locator, which is the address that defines the route to a file on the Web or any other Internet facility. Generically, it is known as the World Wide Web site address.

Having a list of favorite URLs handy saves time. Using it bypasses the need for you to launch your browser first.

To customize your taskbar settings, point to an empty space in the taskbar and click the secondary button. Then click **Properties**.

Bringing the world to your desktop

With the Windows[®] XP operating system you can set up your desktop with complete World Wide Web integration at a single click.

Adding components to the Web content interface

- 1 Point to an empty space on the desktop and click the secondary button.
- 2 Click on **Properties**.
The Display Properties window appears.
- 3 Click the **Desktop** tab.
- 4 Click the **Customize Desktop** button.
- 5 Click the **Web** tab.

The operating system displays a list of items to add to the desktop.

- 6 To view additional components, click **New**.

The New Desktop Item dialog box appears.

- 7** To browse the Gallery for more components to add, click **Visit Gallery**.

In order to browse, an active Internet connection must be established.

- 8** To select some other Web site, type the address of the Web site you want or click **Browse** to locate it.

You can configure the Web content interface in several other ways. For further information, see your operating system documentation or access Windows® Help by clicking **Start, Help and Support**.

Changing desktop and browsing style

The operating system enables you to customize the way you view your desktop and browse the files and folders on your local computer or network file server.

You can specify that:

- ❖ Items that normally require a double-click will open with a single click.
- ❖ Folders will open in their own window instead of in the same window.
- ❖ Folders are accompanied by a list of common tasks instead of being displayed alone.

The options you choose determine how you browse in the operating system, regardless of whether you start from the desktop, My Computer, Windows Explorer, or Internet Explorer.

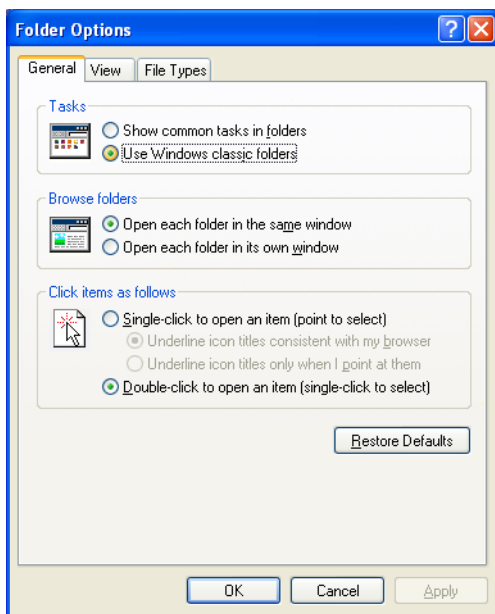

For more information about changing your desktop style, enter desktop in the Help and Support Index.

Choosing a style

To select desktop and browsing style options:

- 1 Open the **Start** menu and select **My Computer**.
- 2 Select the **Tools** menu, then click **Folder Options**.

The Folder Options dialog box appears.

Sample Folder Options dialog box

- 3 Click the preferred options.
- 4 Click **Apply**, then **OK**.

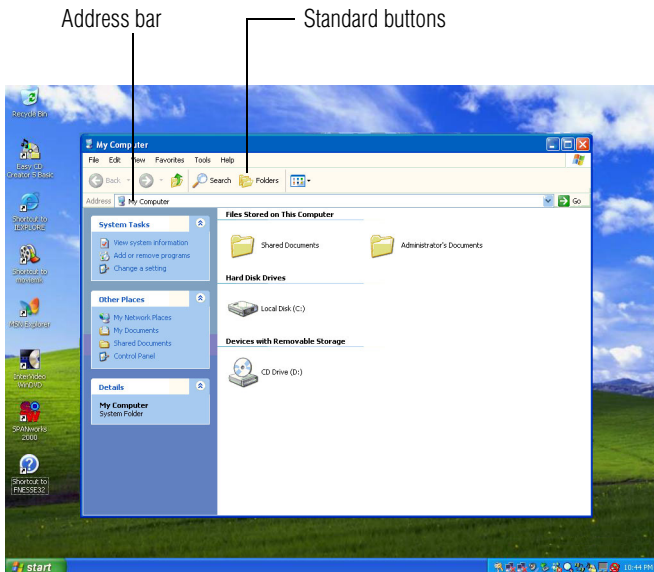

Personalizing individual windows

Just as you can display a Web page on your desktop, you can also display a Web page in an individual window. If you subscribe to the Web page, it can be automatically updated on a regular basis. For example, using this Web integration feature you can monitor weather, game scores, stock prices, or headlines—all in the window of your choice.

Customizing window toolbars

You can display one or more customizable toolbars at the top of a window. As you browse, the operating system detects the kind of information presented in the window and automatically displays the appropriate toolbar buttons and menus.

You can also add these toolbars to the taskbar.

Sample toolbar locations

The elements you can add to the top of the window are:

<i>Toolbar element</i>	<i>Description</i>
------------------------	--------------------

Standard buttons	Displays buttons for commonly used commands, such as copying, pasting, deleting items, changing views, and browsing backward and forward.
------------------	---

Address Bar	Opens Web pages, programs, folders, or documents. By default, the address bar shows your current location, and whether it is a folder or a Web page. You can browse to another location by typing an address — a URL, a path, or even a program name.
-------------	---

If you start typing a previously typed address, the AutoComplete feature finishes the address for you.

Links	Displays buttons to Web sites.
-------	--------------------------------

Displaying a toolbar in a window

- 1 Open the **Start** menu and select **My Computer**.
- 2 On the **View** menu, point to **Toolbars**, then click the name of the toolbar you want to display.

The toolbar appears below the menu bar of the current window.

Displaying information about each folder

In addition to displaying the contents of each window, you might find it helpful to have the operating system display the name of the folder and brief information about how to use the folder. This means displaying an individual window as a Web page.

- 1 Open the **Start** menu and select **My Computer**.
- 2 Open the folder you want to view as a Web page.

- 3 In the **Tools** menu, select **Folder Options**.
- 4 In the Tasks section, click the button for **Show common tasks in folders**.
- 5 Click **Apply**, then **OK**.

Sample Control Panel window as a Web page

The addition of the name of the folder and instructions for how to use the folder on the left give the window the appearance of a Web page.

Setting up for communications

In order to connect to the Internet, use an online service, or communicate across the telephone lines with another computer, you need:

- ❖ A modem (one comes with your computer)
- ❖ A telephone line
- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or online service if you plan to use the Internet

NOTE

There are many other ways to connect to the Internet in addition to those discussed in this section.

For troubleshooting information related to this topic, see [“Modem problems” on page 232](#) and [“Wireless networking problems” on page 233](#).

Determining the COM port

Your modem is connected to one of the computer's COM (communications) ports. The default setting for the modem is COM3.

The following procedure is intended to support you if you need to either upgrade your modem or reset the port to the default settings.

If you're having trouble connecting through the modem, you may need to determine the current COM port name and possibly change it.

To find out which port your modem is connected to in the operating system:

- 1 Click **Start**, click **Control Panel**, then **Printers and Other Hardware**.

The Control Panel opens.

- 2 Click **Phone and Modem options**.

The Phone and Modem options window appears.

- 3 Click the **Modems** tab.

A location box appears.

- 4 Make a note of the COM port number shown in the **Attached to** field.

- 5 To verify that the modem is set up properly, double-click the COM port to which your modem is connected.

The Toshiba Software Modem Properties box appears. In the device status area, the computer should indicate whether the modem is working properly.

- 6 If the modem is not working properly, click **Troubleshooting** and follow the instructions.
- 7 Click **OK** to close the Properties box, then the Phone and Modem options box.
- 8 Close the Control Panel.

Using the Ethernet LAN Port

If your operating system is Windows® XP Professional, you can connect your computer to a Local Area Network (LAN) at work or from a remote location.

When your computer starts, the Windows® operating system attempts to contact a Dynamic Host Configuration Protocol (DHCP) server. If the computer is not connected to a network, it may pause a few minutes as it waits for a reply. To avoid this delay, you can configure the Windows® operating system to disable the LAN port.

To disable the LAN port:

- 1 Click **Start** and then click **Control Panel**.
- 2 Click **Performance and Maintenance**.
- 3 Click the **System** icon and select the **Hardware** tab, then select the **Device Manager** button.
- 4 Select **Network Adapters**, then select the specific Network Adapter.
- 5 Secondary click the **Adapter** and click **Disable**.
- 6 Click **Yes** to confirm disabling the network card.

Your LAN port is now disabled.

Accessing a LAN

To access a LAN:

- ❖ At the office, you can connect the network Ethernet cable to the RJ45 jack on your computer.
- ❖ Your computer may be equipped for wireless communications. If so, see the next section on [Using Wireless LAN Connectivity](#).
- ❖ From home or while on the road you'll need a dial-up connection. Ask your network administrator for the telephone number to access the network.

Setting up a wireless connection

For information on how to set up a wireless connection, refer to your wireless networking device documentation or your network administrator.

Using Wireless LAN Connectivity

NOTE

Wireless connectivity and some features may require you to purchase additional software, external hardware or services. Availability of public wireless LAN access points may be limited.

Your system may come with an optional wireless LAN module. This is a technology that expands wireless communication beyond networking equipment, and can connect many different kinds of electronic devices without the need for cables.

For information on how to set up a wireless connection, refer to your wireless networking device documentation or your network administrator.

To use your wireless communication, slide the wireless on/off switch to the On position.

NOTE

When the Wi-Fi antenna switch is on, the wireless indicator light above the keyboard will be lit.

For help with common Wi-Fi networking problems, see [“Wireless networking problems”](#) on page 233.

Using audio features

Your computer is equipped with a speaker.

The computer plays sounds through the internal speaker. It uses the sound settings in your operating system. To adjust the volume, click the speaker icon in the system tray.

Using external speakers or headphones

Instead of using the internal speaker, you can connect headphones or a pair of external stereo speakers.

⚠ CAUTION

Before putting on headphones to listen to an audio CD, turn the volume dial down, and do not set the volume too high when using the headphones. Continuous exposure to loud sound can harm your hearing.

TECHNICAL NOTE: Use amplified speakers that require an external power source. Other types of speakers will be inadequate to produce sound from the computer.

To play back sound files through external speakers or headphones:

- 1 Locate the headphone jack on the computer.
- 2 Using any necessary adapters, plug the cable from the headphones or external speakers into the headphone jack.

To adjust the volume:

- ❖ For external speakers, use the volume control on the speaker in conjunction with the volume control on the computer.
- ❖ For headphones, use the volume dial.

Recording sounds

An external microphone may be used with other software to record audio sounds and save them as digital audio .WAV files on a variety of media.

DEFINITION: A .WAV (pronounced “wave”) file is one of the formats for storing sound in files.

TECHNICAL NOTE: If you record MP3 files, you will only be able to play them on a device capable of playing MP3 files.

You may also record sounds as .WAV files by connecting an external microphone or other sound source to the microphone jack.

Using a microphone

- 1 Connect an external microphone to the computer.
- 2 Click **Start**, point to **All Programs, Accessories, Entertainment**, then click **Sound Recorder**.

Sample Sound Recorder screen

- 3 Click the **Record** button and speak normally into the microphone.

NOTE

You can only record 60 seconds at a time.

- 4 When you have finished recording, click the **Stop** button.

- 5 To hear what you just recorded, click the **Play** button.

- 6 To save the file, select **Save** from the **File** menu.

NOTE

The microphone on your computer might be set to Mute. To check this, click Start, point to All Programs, Accessories, Entertainment, and then click Volume Control.

Chapter 6

Toshiba Utilities

Your computer includes several utilities designed to help you to reconfigure your system to best meet your individual needs. Together, these allow you to ascertain certain system details, set additional options, or change default options. These utilities are described in this chapter:

- ❖ Fn-esse®
- ❖ Hotkey utility
- ❖ Toshiba Mobile Extension
- ❖ TOSHIBA Assist
- ❖ Trusted Platform Module (TPM)
- ❖ HDD Protection
- ❖ TOSHIBA Button Controls
- ❖ TOSHIBA Power Saver
- ❖ TOSHIBA Hardware Setup
- ❖ TOSHIBA Password Utility
- ❖ TOSHIBA Touch and Launch
- ❖ TOSHIBA Zooming Utility

- ❖ TOSHIBA SD™ Memory Boot Utility
- ❖ Fingerprint recognition utility

Fn-esse®

The operating system shortcuts and Toshiba's Fn-esse program provide quick ways to open programs, documents, and folders from within any program without using the Start menu.

This section describes how to use the Fn-esse program to quickly access your programs and files.

With Fn-esse, you can assign an Fn key combination to:

- ❖ Open a Windows® program
- ❖ Open a file in its associated Windows® program
- ❖ Display a customized folder of Windows® programs and/or files from which to choose

Fn-esse also has several keys, known as hot keys, that perform preassigned operations. For more information, see [“Hot Keys” on page 250](#).

You cannot assign any key that is associated with a hot key or a keyboard overlay.

Starting Fn-esse

To access Fn-esse:

- ❖ Click **Start, All Programs, Toshiba Utilities** and **Fn-esse**.

The Fn-esse keyboard appears.

Sample Fn-esse keyboard

The keys are color-coded as follows:

- ❖ Available keys are white.
- ❖ Assigned keys and keys associated with a popup list are shown on the Fn-esse keyboard in the selected color.
- ❖ Unavailable keys do not appear.

Assigning a key to a program or document

There are two ways to assign a key to open a program or document:

- ❖ Drag-and-drop
- ❖ Use the keyboard or pointing device

The method most often used is drag-and-drop.

Using drag-and-drop

To assign a key to a program or document:

- 1** Start both Fn-esse and Windows® Explorer (or the program supporting drag-and-drop).
- 2** Resize the Explorer window so that you can see both the Fn-esse keyboard and Explorer at the same time.
- 3** In the Explorer window, highlight the program or document file you wish to assign to a key.

-
- 4 Click and hold the primary button as you drag the highlighted item from Explorer to the key on the Fn-esse keyboard you want to assign to it.
 - 5 Release the primary button.

Fn-esse displays the Add/Edit Command dialog box with the Description, Command Line, and Working Directory fields automatically completed.

- 6 Click **OK** to close the Add/Edit Command dialog box with your key assignment in place.

The program or document is now associated with the key you just selected. To open the program or document, press Fn plus the appropriate key from within any Windows® program.

Using the keyboard or pointing device

To assign a key to open a program or document:

- 1 Start Fn-esse.
- 2 Perform one of the following:
 - ❖ Using the keyboard, press and hold the Fn key, then press the desired assignment key.
 - ❖ Using the pointing device, move the cursor over the desired key and press the secondary button.

The Assignment Type dialog box appears.

HINT: If you are making a direct key assignment, complete step 3. If you are making a popup assignment, complete step 4.

- 3 To make a direct key assignment, select **Direct** to display the Add/Edit Command dialog box, then complete these steps:

-
- ❖ Enter the Description, Command Line, and Working Directory for the new Fn-esse key assignment, or click the **Browse** button to specify this information.
 - ❖ Click **OK**.
- 4 To make a popup assignment, select **Popup** to display the Application Explorer dialog box, then complete these steps:
- ❖ Select the desired folder. The left side of the Application Explorer window displays the folders in the Programs menu. The right side lists the programs and documents in the folder. These are the items that appear in the popup list.
 - ❖ To create a popup list with items from various folders, or to pick only a few items from a folder, create a new folder containing only the desired programs and documents. If you are unsure how to do this, refer to your operating system documentation.
 - ❖ Click **OK** to associate the folder with the key you just selected.
 - ❖ To open a popup list showing the items in that folder, press Fn plus the appropriate key from within any Windows[®] program.

Viewing existing key assignments

To view the existing key assignments, choose **Assignments** from the Fn-esse keyboard. Fn-esse displays the Function Key Assignments dialog box. This box lists all the key assignments and the program or document to which each key is assigned.

To view items in a popup list, click the **Expand popup lists** check box.

Changing or removing existing key assignments

- 1 In the Fn-esse keyboard, click the key you wish to change with the secondary button.
Fn-esse displays the Assignment Type dialog box.
- 2 To change the key assignment, click **Direct** or **Popup** and continue as if you were creating a new assignment.
- 3 To remove the key assignment, click **Clear**.

Hotkey utility

The hotkey utility allows you to receive a confirmation message when you use the hot key combination for Standby [Fn+F3] and Hibernation [Fn+F4].

To activate the utility:

- 1 Click **Start, All Programs, Toshiba, Utilities**, and then click **Hotkey utility**.

The Hotkey window appears.

Sample Toshiba Hotkey utility window

- 2 Put a check mark next to the desired option.
- 3 Click **OK**.

Toshiba Mobile Extension

To adjust the settings for the optional Slim Port Replicator, use the TOSHIBA Mobile Extension utility.

To use the TOSHIBA Mobile Extension utility:

- 1 Click **Start**, then **Control Panel**, then **Performance and Maintenance**.

- 2 Click **TOSHIBA Mobile Extension**.

The TOSHIBA Mobile Extension dialog box appears.

- 3 Under the **Mobile Extension Service** tab, you can select behaviors to enable or disable, such as Warm Undock Service and Notification Messages, by checking or unchecking the appropriate box.

Sample TOSHIBA Mobile Extension Service tab options

- 4 Under the **Display Change Service** tab, you can set the default display configuration you wish to use when docking the system to the optional Slim Port Replicator.

Sample Display Change Service tab options

For more information about expansion devices, see [“Using an expansion device” on page 134](#).

TOSHIBA Assist

The TOSHIBA Assist provides quick access to computer functions and allows you to customize a range of computer settings.

To access the control panel:

- 1 Click **Start, All Programs, Toshiba, Utilities**, then click **Toshiba Assist**.

The TOSHIBA Assist window appears.

Sample TOSHIBA Assist window

The TOSHIBA Assist offers four categories of features:

- ❖ Connect
- ❖ Secure
- ❖ Protect & Fix
- ❖ Optimize

Optimize

The features available in this category are:

- ❖ Power Management
- ❖ Mouse
- ❖ Hotkey assignment (for detailed information, see [“Fn-esse®” on page 159](#))
- ❖ Toshiba Hardware Settings
- ❖ Toshiba Button Controls
- ❖ SD Memory Card Format
- ❖ Zooming Utility
- ❖ Accessibility

Connect

The features available in this category are:

- ❖ Connectivity Doctor
- ❖ *Bluetooth®*
- ❖ Wireless LAN utility
- ❖ TOSHIBA Application Installer

Secure

The features available in this category are:

- ❖ Supervisor password
- ❖ User password

Protect and Fix

The features available in this category are:

- ❖ PC Diagnostic Tool
- ❖ HDD Protection

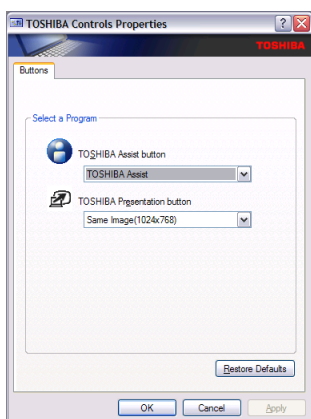

TOSHIBA Button Controls

The TOSHIBA Button Controls allow you to customize the Toshiba Assist and Toshiba Presentation buttons. Those buttons are located just above the function keys at the top of the keyboard.

To access these controls:

- 1 In the Toshiba Assist window, click **TOSHIBA Button Controls** under the **OPTIMIZE** tab.

The TOSHIBA Controls Properties window appears.

Sample TOSHIBA Controls Properties window

- 2 Click the selected button.
- 3 Make the desired selections.
- 4 Click **Apply**, then click **OK**.

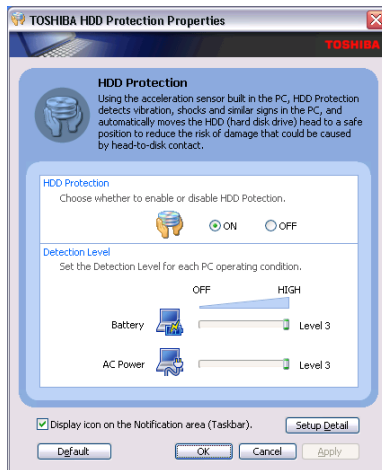

HDD Protection

HDD Protection helps protect your computer's hard disk drive (HDD) against damage caused by vibration or sudden motion. If the built-in vibration sensor detects vibration while HDD Protection is enabled, the HDD head is moved to a safe position to protect the HDD from damage.

To access the HDD Protection feature:

- 1 In the Toshiba Assist window, click the **PROTECT & FIX** tab, then double-click the **HDD Protection** icon.

The TOSHIBA HDD Protection Properties window appears.

Sample TOSHIBA HDD Protection Properties window

- 2 Set the HDD protection settings as you desire, or select the default settings by clicking **Default**.
- 3 For additional settings, click **Setup Detail** and choose the desired settings.
- 4 To enable one-click access to HDD Protection, select the **Display icon on the Notification area (Taskbar)** checkbox.
- 5 Click **Apply**, **OK**.

TOSHIBA Power Saver

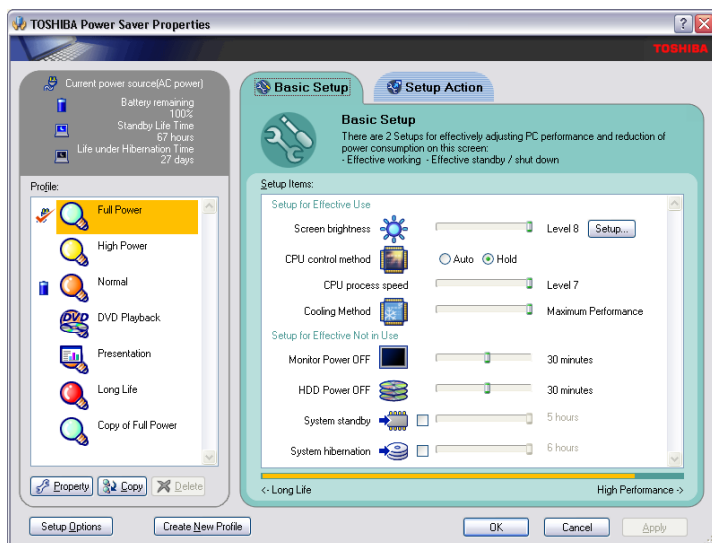

The TOSHIBA Power Saver utility enhances your computer's power management capabilities. It controls the computer's Power Save profiles, which is a series of settings for power management. In the TOSHIBA Power Saver Properties dialog box, you can choose which profile to use, change settings for each profile, or create your own custom profiles.

To access Power Saver Properties:

- 1 Open the **Start** menu, click **Control Panel**, then **Performance and Maintenance**.

- 2 Click the **TOSHIBA Power Saver** icon.

The TOSHIBA Power Saver Properties dialog box appears.

Sample TOSHIBA Power Saver Properties window

You may also access the Power Saver Properties by pressing the TOSHIBA Assist button:

- 1 Press the TOSHIBA Assist above the left side of the keyboard.

The TOSHIBA Assist screen appears.

- 2 Click Optimize and click the **Power Management** icon.

By changing the options that appear in the Power Saver Properties dialog box and clicking OK, you can reconfigure that function.

You may choose a power-saving management strategy to best suit your computing needs. If you are running on batteries and the programs that you are using do not require a lot of system resources, you may experience longer work sessions by enabling the Normal or Long Life settings.

Any options that you change become the default settings when you exit the program. You do not have to restart your system before they become default settings.

TOSHIBA Hardware Setup

TOSHIBA Hardware Setup is the Toshiba configuration management tool. To access it:

- 1 Click **Start, All Programs, Toshiba.**
 - 2 Point to **Utilities**, then select **Toshiba Assist.**
- The TOSHIBA Assist window appears.
- 3 Click the **Optimize** tab.
 - 4 Double-click the **Toshiba Hardware Settings** icon.

The TOSHIBA HWSetup window appears.

Sample TOSHIBA HWSetup window

The TOSHIBA HWSetup window contains tabs for each hardware setup option available for your system. To access a specific hardware option, select the appropriate tab, then select the desired options. The tabs are:

- ❖ **General**—Allows you to view current BIOS version or to change certain settings back to their default values
- ❖ **Device Config**—Shows the Device configuration options
- ❖ **Display**—Allows you to change various default settings for the built-in LCD display
- ❖ **CPU**—Allows you to set the “CPU Frequency Mode” to one of “Dynamically Switchable,” “Always High,” or “Always Low”

Dynamically Switchable—This mode is the default setting for your computer, and automatically changes the processing frequency and decreases voltage depending on the power source:

- ❖ **Always High**—If your computer is connected to the AC adapter, the CPU frequency mode is set to high for faster processing.
- ❖ **Always Low**—If your computer is running on battery power, the CPU frequency mode is set to low for slower processing. Switching the CPU to low allows you to conserve power and extend the operating time of your battery.
- ❖ **Boot Priority**—Allows you to change the sequence in which your computer searches the drives for the operating system

You can also manually choose the Boot Priority by pressing the power button, then quickly pressing the F12 key, or the right or left arrow keys.

Select the boot device icon by pressing the right or left arrow keys, then pressing the Enter key.

NOTE

Since the system is a quick-booting system, you must press the arrow keys immediately after pressing the power button.

- ❖ Keyboard—lets you enable or disable wake-on-keyboard
- ❖ USB—Allows you to enable or disable USB Legacy Emulation
- ❖ LAN—Lets you enable or disable the Wake-on-LAN feature, and also enable or disable the built-in LAN

TOSHIBA Password Utility

The TOSHIBA Password Utility allows you to set a user-level password in TOSHIBA Assist or in System Setup.

- 1 Press the **Toshiba Assist** button and click **Secure**.
- 2 Click the **User Password** icon.

This opens the TOSHIBA Password Utility.

Sample TOSHIBA Password Utility tab options

- 3 Click **Set**.
- 4 Enter a password (then enter it again to verify).
- 5 Click **Set**.
- 6 Click **OK** if you want to save the password to a text file on a diskette or media of your choice. Click **Cancel** if

you do not want to save the password to a text file. This is known as the password service diskette.

- 7** Click **OK** to exit.
-

CAUTION

If you choose to set a supervisor or user password, Toshiba strongly recommends that you save your password in a location where you can later access it should you not remember it.

Toshiba is not responsible for any losses that may occur to you, your organization or others as a result of the inability to access your computer.

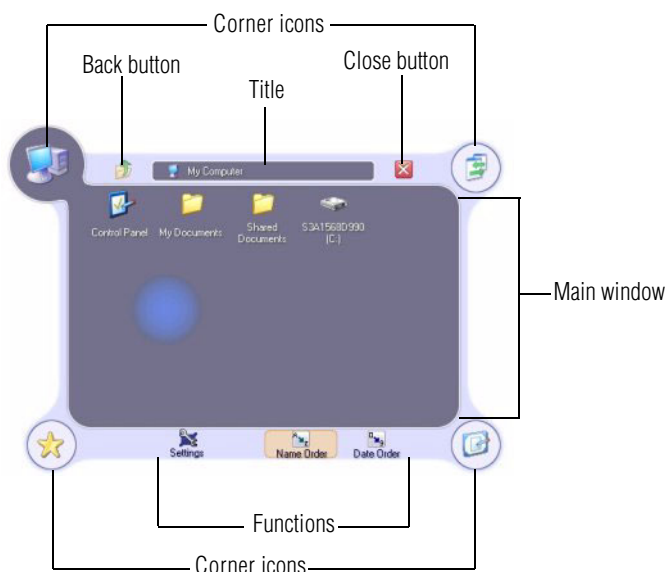

TOSHIBA Touch and Launch

TOSHIBA Touch and Launch is a program that adds features to the TouchPad. For example, by selecting an icon you can:

- ❖ Open a document
- ❖ Launch a program
- ❖ Show a list of windows and switch the active window
- ❖ Open Internet Explorer favorites

TOSHIBA Touch and Launch is like a miniature Windows® desktop. You can personalize TOSHIBA Touch and Launch to help you work more efficiently.

To activate TOSHIBA Touch and Launch, touch and hold your finger on a corner of the TouchPad. The TOSHIBA Touch and Launch window appears.

Sample TOSHIBA Touch and Launch window and options

A blue circle within the TOSHIBA Touch and Launch window represents your finger location on the TouchPad. As you move the blue circle over an icon in the TOSHIBA Touch and Launch window, the icon is highlighted or selected. Release your finger from a selected icon to choose the icon's function.

If the icon is highlighted in orange and selected, the function corresponding to the selected icon launches and the TOSHIBA Touch and Launch window closes. If the icon is highlighted in blue and selected, the function corresponding to the selected icon launches and the TOSHIBA Touch and Launch window remains open.

To close the TOSHIBA Touch and Launch window, release your finger when the blue circle is not on any icon. Or, highlight the Close icon in the upper right area of the TOSHIBA Touch and Launch window.

A short description of the currently selected corner icon appears below the TOSHIBA Touch and Launch window.

The title and functions can change when you select one of the corner icons.

The corner icons can be changed to other shortcuts using the TOSHIBA Touch and Launch settings. By default the four icons displayed are:

- ❖ My Computer (upper left)
- ❖ Switch Window (upper right)
- ❖ Favorites (lower left)
- ❖ Desktop (lower right)

The type and number of icons you see in the main part of the TOSHIBA Touch and Launch window are determined by which corner icon you select.

TOSHIBA Touch and Launch is controlled/adjusted via an icon on the system tray. The icon will change color when the TOSHIBA Touch and Launch is active. Double-click the icon to open the TOSHIBA Touch and Launch Settings window. Right-click the icon to see the following shortcuts:

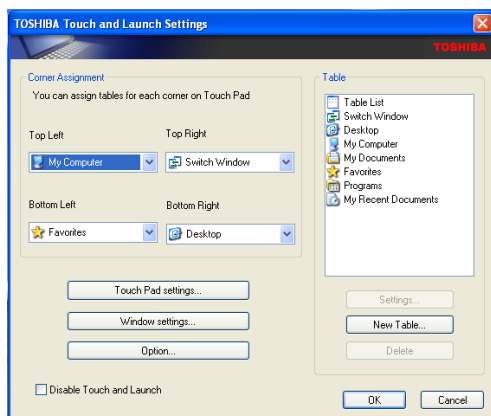

- ❖ Settings

The Settings function allows you to define the functions/features you can access in TOSHIBA Touch and Launch

- ❖ Disable/Enable
- ❖ Help
- ❖ About

TOSHIBA Touch and Launch Settings

When you choose the Settings shortcut menu entry, the TOSHIBA Touch and Launch Settings window appears.

Sample TOSHIBA Touch and Launch Settings window

In the Corner Assignment section you can change the icons you see at the four corners of the TOSHIBA Touch and Launch window using the drop-down list boxes. The icons are referred to as tables in the TOSHIBA Touch and Launch Settings dialog box.

The TouchPad settings button allows you to define how sensitive the TouchPad will be to your finger on the TouchPad before it activates the TOSHIBA Touch and Launch window.

The Window settings button allows you to control the size and transparency of the TOSHIBA Touch and Launch window.

The Option button allows you to define how folders will open, define visual effects and control when to show help.

A list of tables appears in the Table section of the TOSHIBA Touch and Launch Settings window. These are the same items (icons) you can choose in the Corner Assignment section of the TOSHIBA Touch and Launch Settings. As you

select a table, the Settings button may become active. Not all tables have settings.

The New Table button allows you to create a new table.

The Delete button deletes the selected table.

Disabling or enabling TOSHIBA Touch and Launch

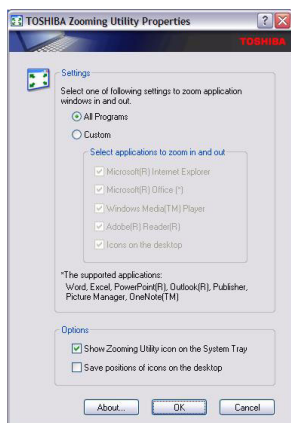

You can set or clear the Disable TOSHIBA Touch and Launch check box in the TOSHIBA Touch and Launch Settings window in order to disable or enable this feature. You can also use the TOSHIBA Touch and Launch icon on the system tray.

TOSHIBA Zooming Utility

This utility allows you to zoom in and zoom out of applications as well as the icons for Microsoft® Internet Explorer, Microsoft® Office, Windows® Media Player™, and Adobe® Reader.

To access the utility, click **Start, All Programs, Toshiba, Utilities**, and then **TOSHIBA Zooming Utility**.

The TOSHIBA Zooming Utility screen appears.

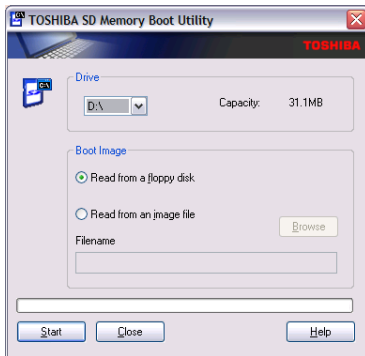

Sample TOSHIBA Zooming Utility screen

TOSHIBA SD™ Memory Boot Utility

In order to boot from an SD card, you must make the card SD card bootable. To do so, run the Toshiba SD Memory Boot Utility.

The TOSHIBA SD Memory Boot Utility screen appears.

Sample TOSHIBA SD Memory Boot Utility screen

- 1 Attach a USB floppy drive to your computer, and insert a bootable floppy disk.
- 2 Insert the SD card.

NOTE

Be sure to back up your data to external media before performing this procedure as data on the drive may be lost.

- 3 Click **Start**, **All Programs**, **Toshiba**, **Utilities**, and then **SD Memory Boot Utility**.
- 4 Select the drive where the SD is located.
- 5 Select the **From Floppy image** option.

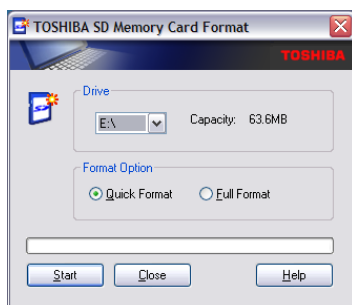

-
- Click the **Start** menu.
-

NOTE

To create a bootable SD with the From image file option, you need a third-party application.

SD™ Memory Card Format

This utility is used to format SD cards used with the Bridge Media Adapter Slot.

Sample SD Memory Card Format screen

Trusted Platform Module (TPM)

Your Toshiba computer includes the TPM (Trusted Platform Module) which is a security encryption device for your system's hard disk drive. TPM is already included on your system, but needs to be installed and enabled using the following procedures.

To install TPM:

- Launch the Toshiba Application Installer from the desktop and install the following packages:
 - ❖ Infineon Trusted Platform Module Utility
 - ❖ Infineon TPM (Trusted Platform Module) Installation Guide

- 2 Follow the instructions on the screen.

Once the TPM files have been installed, you will need to enable the TPM feature through your system's BIOS.

To enable TPM:

- 1 Restart your system and hold down the ESC key.
- 2 Press F1 when directed.
- 3 Press the pg dn key.
- 4 Press the down arrow key until TPM is highlighted and then press the space bar to change the status of **TPM** to **Enabled**.
- 5 Press Y to save the changes.
- 6 Press the End key and then press the Y key to accept the changes.

Your system will restart.

For further information on how to set up and use this utility, please see the Infineon TPM (Trusted Platform Module) Installation Guide.

Hard disk drive passwords

Your computer comes with a System Setup utility that lets you set two types of hard disk drive passwords—user and master. These passwords protect your primary and secondary hard disks as follows:

- ❖ Setting a hard disk drive user password prevents an unauthorized user from accessing your hard disk, even if it is removed and installed on another computer. This password does not encrypt data on the hard disk.
- ❖ Setting a hard disk drive master password lets you bypass the hard disk drive user password and access your hard disk, in case you forget the hard disk drive user password. If you choose to set a hard disk drive master password,

you should set it before you set a hard disk drive user password.

HINT: The hard disk drive shipped with your computer may not support the master password feature. When you attempt to set master password protection, your computer may alert you that this feature is not supported by your drive. If this happens and you want to establish a master password for your hard disk, contact your network administrator for instructions.

Setting a hard disk drive user only password in System Setup

CAUTION

If you choose to set a hard disk drive user password, we strongly recommend that you set a hard disk drive master password as well.

If you set a hard disk drive user password and later forget the password, YOU WILL NEVER BE ABLE TO ACCESS YOUR HARD DISK AGAIN, unless you've set a hard disk drive master password.

Toshiba is not responsible for any losses that may occur to you, your organization or others as a result of the inability to access the hard drive.

To register a user only password in System Setup:

- 1 Click **Start**, then click **Shutdown**, and click **OK**.

The computer shuts down.

- 2 Hold down the Esc key and press and hold the power button until the on/off light on the system indicator panel illuminates (blue) for approximately one second. When the following message appears on the screen: "Check system, Then press [F1] key," press F1.

The System Setup screen appears.

- 3 Press H to move to the **HDD PASSWORD** section on the screen.
- 4 Press the spacebar to select **User Only** password mode.
- 5 Press the down arrow key to move to the **User Password** section.
- 6 Press the spacebar, then type a password of 1 to 16 characters and press Enter. You may use any combination of letters and numbers in your password.
- 7 When System Setup prompts you to verify the password, type it again and press Enter.

If the two passwords match, System Setup displays: Registered. If the two passwords do not match, an error message appears. Repeat steps 6 and 7 to enter the password again.

- 8 Press End to save the change.
- 9 When System Setup prompts you to confirm your change, Press Y.

Deleting or changing a hard disk drive user only password in System Setup

To delete or change a user only password in System Setup:

- 1 Click **Start**, then click **Shutdown**, and click **OK**.

The computer shuts down.

- 2 Hold down the Esc key and press and hold the power button until the on/off light on the system indicator panel illuminates (blue) for approximately one second. When the following message appears on the screen: "Check system, Then press [F1] key," press F1.

The System Setup screen appears.

- 3 Press H to move to the **HDD PASSWORD** section on the screen.

- 4 Press the spacebar, then type in your user password and press Enter.
- 5 If you want to change the password, input the new password.
- 6 When System Setup prompts you to verify the password, type it again and press Enter.

If the two passwords match, System Setup displays: Registered. If the two passwords do not match, an error message appears. Repeat steps 5 and 6 to enter the password again.
- 7 If you want to delete the user password, leave the password field blank and press Enter twice. System Setup displays: Not Registered.
- 8 Press End to save the change.
- 9 When System Setup prompts you to confirm your change, Press Y.

Setting a hard disk drive master and user password in System Setup

CAUTION

Make sure you choose a hard disk drive master password you can remember easily. If you set a hard disk drive user password and later forget the password or lose your password diskette, you will need to enter the hard disk drive master password in order to access your hard disk.

To register master and user passwords in System Setup:

- 1 Click **Start**, then click **Shutdown**, and click **OK**.
The computer shuts down.
- 2 Hold down the Esc key and press and hold the power button until the on/off light on the system indicator panel illuminates (blue) for approximately one second. When

the following message appears on the screen: “Check system, Then press [F1] key,” press F1.

The System Setup screen appears.

- 3 Press H to move to the **HDD PASSWORD** section on the screen.
- 4 Press the spacebar to select **Master + User** password mode.
- 5 Press the down arrow key to move to the Master Password section. You must register a Master Password first.
- 6 Press the spacebar, then type a password of 1 to 16 characters and press Enter. You may use any combination of letters and numbers in your password.
- 7 When System Setup prompts you to verify the password, type it again and press Enter.

If the two passwords match, System Setup displays: Registered for both User and Master passwords. If the two passwords do not match, an error message appears. Repeat steps 6 and 7 to enter the password again.
- 8 Press End to save the change.
- 9 When System Setup prompts you to confirm your change, Press Y.

Changing the master and user passwords in System Setup

To change the master and user passwords in System Setup:

- 1 Click **Start**, then click **Shutdown**, and click **OK**.

The computer shuts down.
- 2 Hold down the Esc key and press and hold the power button until the on/off light on the system indicator panel illuminates (blue) for approximately one second. When the following message appears on the screen: “Check system, Then press [F1] key,” press F1.

The System Setup screen appears.

- 3 Press H to move to the **HDD PASSWORD** section on the screen.
- 4 Use the up and down arrow keys to select the password you wish to change.
- 5 Press the spacebar, then enter the appropriate password and press Enter.
- 6 If you want to change your password, input the new password.
- 7 When System Setup prompts you to verify the password, type it again and press Enter.

If the two passwords match, System Setup displays: Registered. Note that you can only change (not delete) the user password if a master password is registered.

- 8 Press End to save the change.
- 9 When System Setup prompts you to confirm your change, Press Y.

Deleting the hard disk drive master and user passwords in the System Setup

HINT: You must delete the hard disk drive master password before you can delete the hard disk drive user password.

To delete the master and user passwords in System Setup:

- 1 Click **Start**, then click **Shutdown**, and click **OK**.
The computer shuts down.
- 2 Hold down the Esc key and press and hold the power button until the on/off light on the system indicator panel illuminates (blue) for approximately one second. When

the following message appears on the screen: “Check system, Then press [F1] key,” press F1.

The System Setup screen appears.

- 3 Press H to move to the **HDD PASSWORD** section on the screen.
- 4 Select the Master Password using the down arrow key.
- 5 Press the spacebar, then enter the master password and press Enter.
- 6 If you want to delete the master password, leave the password field blank and press Enter twice.
System Setup displays: Not Registered. The user password will also display as Not Registered.
- 7 Press End to save the change.
- 8 When System Setup prompts you to confirm your change, Press Y.

Fingerprint recognition utility

Your computer features OmniPass™, a utility that allows you to use a single master password for all Windows® passwords, application passwords, and online passwords. OmniPass also uses fingerprint recognition to verify a user’s identity before granting permission to use the master password, thus providing a high degree of security.

Features of the OmniPass utility include:

- ❖ Master password—One master password replaces all of your Windows, application, and online passwords.
- ❖ Easy importing and exporting of existing passwords.
- ❖ Secure storage of unlimited passwords and related information.
- ❖ Security through fingerprint recognition technology.

- ❖ User-friendly Graphical User Interface (GUI) for password, user and identity management.
- ❖ Seamless integration with Windows, providing secure Windows login.
- ❖ International language support.

Getting started

How OmniPass works

OmniPass allows you to use a single “master” password to gain access to all of your Windows accounts, application accounts, and online accounts. OmniPass also uses fingerprint recognition technology to verify your identity so no one else can use your master password even if they know what it is.

To use OmniPass, you need to establish a master password, and register two fingerprints (from two separate fingers) which OmniPass will use to verify your identity. Then, you provide OmniPass with the appropriate information for each user account (application programs, Web sites, etc.) that is to be covered by the master password.

Enrolling in OmniPass

Before using OmniPass you must specify your user name and password, specify the device to be used for fingerprint authentication, and capture your fingerprints. This process is called enrollment.

Before you can enroll in OmniPass, you must have a Windows login password. If you do not have one, create one as follows:

- 1 Click **Start**, then select **Control Panel**.
- 2 Double-click **User Accounts**, then select **Change an Account**.

- 3 Select the user from the list, then select **Create Password** and follow the instructions.
- 4 When you are finished creating a Windows password, you are ready to enroll in OmniPass.

To enroll in OmniPass, perform the following steps:

- 1 Click **Start**, then select **All Programs, Softex, OmniPass Enrollment Wizard**.
- 2 The enrollment wizard displays the welcome screen shown below. Click **Enroll** to continue.

Sample OmniPass welcome screen

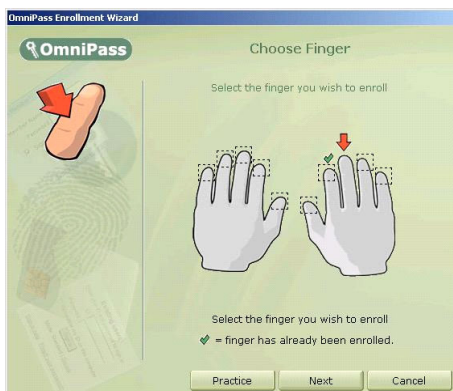

NOTE The first time you use your computer, OmniPass runs automatically. At that point, however, you do not yet have a Windows password. Therefore, **DO NOT** click **Enroll** in the welcome screen. Instead, click **Cancel** to exit OmniPass. To create a password, follow the instructions at the beginning of this section.

- 3 The wizard displays your Windows user name and domain. Enter your Windows password. This password will become your master password. Click **Next** to continue.

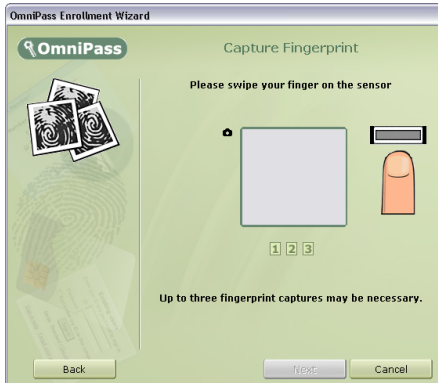

Sample verify user name and password screen

- 4** The **Choose Finger** screen appears. Select the finger you wish to enroll, then click **Next**.

Sample Choose Finger screen

- 5 The **Capture Fingerprint** screen appears. This screen controls the process of capturing your fingerprint.

Sample Capture Fingerprint screen

- 6 Swipe your fingertip on the fingerprint sensor (located to the right of the computer's touchpad) as follows:

- ❖ Align the first joint of the finger to the center of the sensor.
- ❖ Lightly touch the sensor, then while keeping your finger level, swipe your finger towards you until the sensor surface becomes visible.
- ❖ Ensure that the center of your fingerprint is on the sensor while swiping the finger.

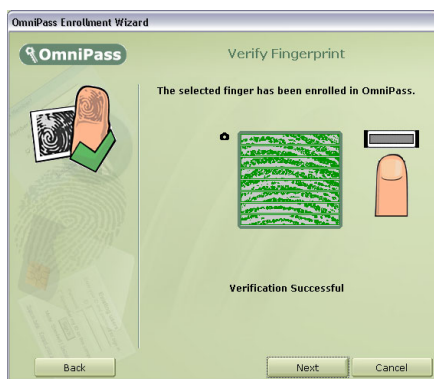

After you swipe your finger, one of the following occurs:

- ❖ The screen displays a green fingerprint, indicating a successful capture. Click **Next** to continue.
- ❖ The screen displays a red fingerprint, indicating that the capture attempt failed. In this case, swipe your finger again.

The **Capture Fingerprint** screen lets you try up to three times to capture your fingerprint. If you fail to capture your

fingerprint after three tries, click **Back** to return to the **Choose Finger** screen, then click **Next** and restart the capture process.

- 7 The **Verify Fingerprint** screen appears. To verify your fingerprint, swipe your finger on the sensor. Verification is successful if the message **Verification Successful** appears and the fingerprint turns green. Click **Next** to continue.

Sample Verify Fingerprint screen

- 8 OmniPass asks if you wish to enroll another fingerprint. Click **Yes**. When you are finished enrolling the second fingerprint, click **Next** in the **Verify Fingerprint** screen.
- 9 The **Audio and Taskbar Settings** screen appears. Select the type of audio prompts and taskbar tips that you want OmniPass to use, and click **Next**.

NOTE

Until you are familiar with OmniPass, it is recommended to accept the default settings shown in the sample Audio and Taskbar Settings screen.

Sample Audio and Taskbar Settings screen

- 10** The **Congratulations** screen appears indicating successful completion of enrollment. Click **Done** to exit.

Sample Congratulations screen

- 11** OmniPass asks if you would like to log on the new user. Click **Yes** to continue.

Sample Log on New User screen

Replacing your passwords

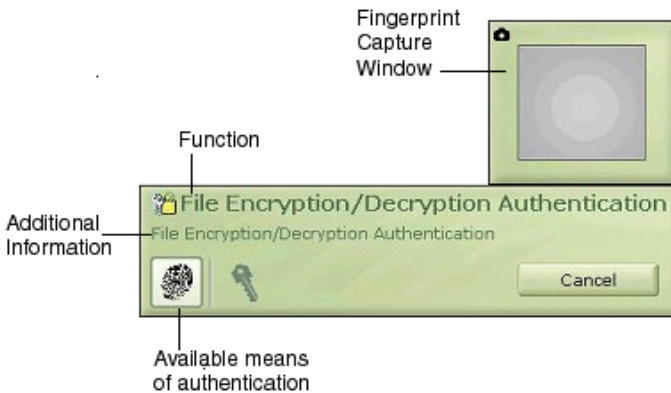

OmniPass Authentication Toolbar

When OmniPass is enabled, the Authentication Toolbar appears at each login for the functions that you selected in the Set Authentication Rules screen.

NOTE

For example, if you selected Windows and OmniPass Logon, the Authentication Toolbar appears during Windows or OmniPass login, when you unlock your computer, resume from standby or hibernate mode, etc. If you selected Application and Web site Password Replacement, the Authentication Toolbar appears when you login to an application requiring a password (provided you have already registered that application's login information with OmniPass).

The Authentication Toolbar appears whenever OmniPass is invoked to authenticate the user in order to grant or deny access to an application or Web site.

Sample Authentication Toolbar

- ❖ **Function:** This indicates the function that is being attempted (Login User or Access).
- ❖ **Additional information:** Additional instructions or information are displayed during authentication.
- ❖ **Fingerprint capture window:** This shows the results of fingerprint authentication.
- ❖ **Available means of authentication:** These icons indicate the types of authentication that are available for use. In particular, highlighted icons indicate the types of authentication used for the current function.

When prompted to authenticate, you must either enter the master password, or swipe your fingerprint, or both.

Remembering passwords

You can make OmniPass “remember” the login credentials (user name, password, etc.) for any password-protected resource, such as an application or a Web site using the **Remember Password** procedure. Once this is done, all you need to do to access the resource is to pass the authentication in effect for that resource; you no longer need to remember and enter the login information. This is of great benefit when

OmniPass is used to remember the login credentials for many different resources.

To use the **Remember Password** procedure to cause OmniPass to remember the login credentials for a resource:

- 1 Bring up the application, or direct your web browser to access the Web site.
- 2 When prompted to log in, enter all of the requested information, such as user name and password, but **DO NOT LOG IN** yet (e.g., do not click **Enter**, **OK**, etc.).
- 3 Right-click the OmniPass system tray icon and select **Remember Password** from the submenu.
- 4 The Windows cursor changes to a gold key . This is the OmniPass cursor.
- 5 Click the OmniPass cursor  anywhere within the login prompt window, but **DO NOT** click any button to commence login (e.g., **Login** or **Submit**).
- 6 In the **Friendly Name** window, enter a short description of the application or Web site, such as “XYZ Credit Card Password”.

Sample Friendly Name screen

- 7 Under **Settings for this Password Site**, select the settings you want OmniPass to use when accessing this

application or Web site. For a detailed explanation of these settings, see “[Authentication settings](#)” below.

- 8 Click **Finish** to end the Remember Password procedure.
- 9 OmniPass automatically logs you in to the application or Web site.

The site location, the credentials you use to access the site, and the OmniPass authentication settings for the site are now stored in OmniPass’ secure database.

Authentication settings

When OmniPass asks for a friendly name for the site being remembered (see “[Sample Friendly Name screen](#)” on [page 196](#)), you can also set how OmniPass authenticates access to the site (authentication settings). There are three effective settings for how OmniPass handles a remembered site.

Sample Authentication Settings in Friendly Name screen

Automatically click the OK or Submit button for this password protected site once the user is authenticated.

This is the default setting, and the most secure option. If this is selected, each time you navigate to this site, OmniPass asks you to authenticate yourself using either the master password or your fingerprint. Once you are successfully authenticated, OmniPass will automatically login to the site.

Automatically enter this password protected site when it is activated. Do not prompt for authentication.

This option is less secure than the previous one. If this is selected, each time you navigate to this site,

OmniPass logs you into the site without prompting for authentication.

NOTE This setting makes accessing a site convenient—whenever you go to the site, you bypass all authentication procedures and gain instant access to the site. However, while you are logged into OmniPass, anyone using your computer (authorized use or not) can gain instant access to all of your password-protected sites. Be careful not to leave your system unattended or unlocked if you choose this setting.

No settings checked in this window.

If you leave both boxes unchecked in **Settings for this Password Site**, OmniPass will prompt for your master password or fingerprint. Once you are authenticated, your credentials will be filled in on the site login screen, but you will still have to click the appropriate button (**Submit**, **Login**, **OK**, etc.) to gain access to the site.

Once these settings have been set and saved, they can be changed at any time. For information on how to do so, see [“Password management” on page 198](#).

Password management

OmniPass provides an interface that allows you to manage the passwords (and all other credentials) of remembered resources. To access this interface:

- ❖ Double-click the OmniPass key in the system tray.
- ❖ Click **Vault Management**.
- ❖ OmniPass will prompt you to authenticate. Proceed with authentication as instructed.
- ❖ Once you gain access to Vault Management, click **Manage Passwords** under **Vault Settings** on the left side of the window.

- ❖ The **Manage Passwords** interface appears, as shown below.

Sample Manage Passwords interface screen

OmniPass user identities

User identities allow an OmniPass user to have multiple accounts with the same resource. For example, you can have two e-mail accounts, one for work use and the other for personal use, on a single Web site. To do this, you create a unique user identity for each account, so that each account has a unique user name and password.

To create and manage identities:

- ❖ Double-click the OmniPass key in the system tray.
- ❖ Click **Vault Management**.
- ❖ OmniPass will prompt you to authenticate.
- ❖ Once you gain access to Vault Management, click **Manage Identities** under **Vault Settings** (as shown

above). Only the identities of the currently logged in OmniPass user can be managed.

To add a new identity:

- ❖ Click **New Identity** or double-click **<Click here to add a new identity>**.
- ❖ Name the new identity and click **OK**.
- ❖ Click **Apply** to ensure the settings are saved.
- ❖ You can now switch to the new identity and start remembering passwords.

To delete an identity:

- ❖ Highlight the identity you want to delete and click **Delete Identity**.
- ❖ Click **Apply** to ensure the settings are saved.

When you delete an identity, all the sites and password protected dialogs associated with the identity are no longer remembered.

To set the default identity:

- ❖ Highlight the identity you want to be the default.
- ❖ Click **Set as Default**.
- ❖ Click **Apply** to ensure the settings are saved.

NOTE

If you log in to OmniPass using the fingerprint sensor, you will automatically be logged in to the default identity for that OmniPass user. In order to choose the user identity at login, you must log in using the master password. For more information, see the following section.

Choosing user identity during login

To choose your identity during login:

- ❖ Enter your user name in the **User Name** field and press **Tab**. The **Domain** field should fill in automatically.
- ❖ Click the **Password** field to place the cursor in it. A pull-down menu will appear in the **Identity** field.
- ❖ Select the identity you wish to login as, then click **OK**.

Sample Choose Identity During Login

Switching user identity

To switch identities at any time:

- ❖ Right-click the OmniPass system tray icon.
- ❖ Click **Switch User Identity** in the menu as shown below.

Sample Switch User Identity screen

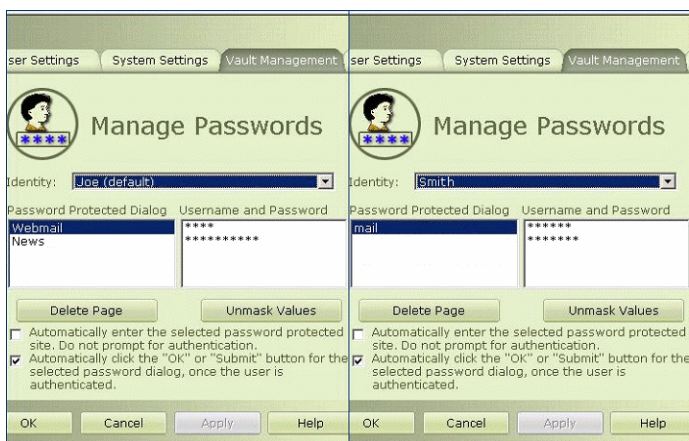

- ❖ The **Switch Identity** dialog will appear as shown below. Select the desired identity, then click **OK**.

Sample Select Identity screen

Identities and password management

The Manage Passwords interface (see “[Sample Manage Passwords interface screen](#)” on page 199) contains a pull-down selection box labeled **Identity**. This field lets you choose the identity whose passwords you wish to manage. When you select an identity here, only those password protected dialogs that are associated with that identity are shown (see below). You can perform all the functions explained in “[Password management](#)” on page 198.

Sample Managing Passwords for Multiple Identities

Care and maintenance of your fingerprint sensor

Failure to follow these guidelines and/or procedures might result in (1) damage to the sensor or cause sensor failure, (2) finger recognition problems, or lower finger recognition success rate.

- ❖ Do not scratch or poke the sensor with your nails or any hard or sharp objects.
- ❖ Do not press the sensor strongly.
- ❖ Do not touch the sensor with a wet finger or any wet objects. Keep sensor surface dry and free of water vapor.
- ❖ Do not touch the sensor with a soiled finger. Minute foreign particles on a soiled or dirty finger may scratch the sensor.
- ❖ Do not paste stickers or write on the sensor.
- ❖ Do not touch the sensor with a finger or any object with built-up static electricity.

Observe the following before you swipe your finger on the sensor, whether for fingerprint enrollment/registration or recognition.

- ❖ Wash and dry your hands thoroughly.
- ❖ Remove static electricity from your fingers by touching any metal surface. Static electricity is a common cause of sensor failures, especially during dry seasons such as winter.
- ❖ Clean the sensor with a lint-free cloth. Do not use detergent to clean the sensor.
- ❖ Avoid the following finger conditions for enrollment or recognition as they may result in fingerprint enrollment errors or a drop in the fingerprint recognition success rate.
 - ❖ Soaked or swollen finger (e.g. after taking bath)
 - ❖ Injured finger

- ❖ Wet finger
- ❖ Soiled or oily finger
- ❖ Extremely dry skin condition on finger

Observe the following to improve the fingerprint recognition success rate.

- ❖ Enroll two or more fingers.
- ❖ Enroll additional fingers if recognition failure occurs often using enrolled fingers.
- ❖ Check your finger condition. Changed conditions, such as injured, rough, extremely dry, wet, soiled, dirty, oily, soaked, swollen fingers, may lower the recognition success rate. Also if the fingerprint is worn down or the finger becomes thinner or fatter, the recognition success rate may be lowered.
- ❖ The fingerprint for each finger is different and unique. Please ensure that only the registered or enrolled fingerprint or fingerprints are used for identification.
- ❖ Check sliding position and speed (see illustration below).

Sample aligning the finger on the sensor

Fingerprint sensor limitations

- ❖ The fingerprint sensor compares and analyzes the unique characteristics in a fingerprint. However, there may be instances where certain users are unable to register their fingerprints due to insufficiently unique characteristics in their fingerprints.

-
- ❖ A warning message will be displayed when recognition is abnormal or recognition is not successful within a fixed duration.
 - ❖ The recognition success rate may differ from user to user.
 - ❖ Toshiba does not guarantee that this fingerprint recognition technology will be error-free.
 - ❖ Toshiba does not guarantee that the fingerprint sensor will recognize the enrolled user or accurately screen out unauthorized users at all times. Toshiba is not liable for any failure or damage that might arise out of the use of this fingerprint recognition software or utility.

Chapter 7

If Something Goes Wrong

Some problems you may encounter when using your computer are relatively easy to identify and solve. Others may require help from your network administrator or the manufacturer of a software program.

This chapter aims to help you solve many problems by yourself. It covers the problems you are most likely to encounter.

If all else fails, contact Toshiba. You will find information on Toshiba's support services at the end of this chapter.

Problems that are easy to fix

Your program stops responding.

If you are working with a program that suddenly freezes all operations, chances are the program has stopped responding. You can exit the failed program without shutting down the operating system or closing other programs.

To close a program that has stopped responding:

- 1** Press Ctrl, Alt, and Del simultaneously (once).

The Windows Task Manager window appears.

- 2 Click the **Applications** tab.

If a program has stopped responding, the words “not responding” appear beside its name in the list.

- 3 Select the program you want to close, then click **End Task**.

Closing the failed program should allow you to continue working. If it does not, continue with the next step.

- 4 Close the remaining programs one by one by selecting the program name, then **End Task**.

To power off your computer, do one of the following:

If you are not connected to a domain server:

- 1 Click **Start, Turn off computer**.

The Turn off computer window appears.

- 2 Click **Turn Off**.

The computer turns off.

If you are connected to a domain server:

- 1 Click **Start, Shut down**.

The Shut Down window appears.

- 2 Select **Shut down** from the drop-down list.

- 3 Click **OK**.

The computer shuts down completely.

Your program performs an illegal operation.

If you receive the message, “Your program has performed an illegal operation,” close the window and continue working. If it happens again, record the details of the message and consult the software manufacturer.

To record the details:

- 1 Click the **Details** button and select the text the operating system displays.

The Details button displays information that the software manufacturer needs to help you solve your problem.
- 2 Press Ctrl and c simultaneously to copy the text to the clipboard.
- 3 Open Notepad (click **Start, All Programs, Accessories** and then click **Notepad**).
- 4 Press Ctrl and v simultaneously to paste the details into Notepad.
- 5 Add a paragraph break and type some notes describing what you were doing when you received the message and how the error can be reproduced.
- 6 Save the file and refer to it when you contact the software manufacturer.

Problems when you turn on the computer

These problems may occur when you turn on the power.

The computer will not start.

Make sure you attached the AC adapter and power cord/cable properly or installed a charged battery.

Press and hold the power switch for at least 10 seconds.

If you are using the AC adapter, check that the wall outlet is working by plugging in another device, such as a lamp.

Verify that the computer is on by looking at the on/off indicator. If the indicator is glowing, the computer is on.

If you are using an AC adapter, verify that the computer is receiving power from the external power source by looking at the AC power light. If the indicator is glowing, the computer is connected to a live external power source.

The computer starts but when you press a key nothing happens.

Verify that the active program accepts text input. Try clicking your mouse on an area where you can type text, and try typing again.

Your computer may be in Standby mode and have a software or resource conflict. When this happens turning the power on returns you to the problem instead of restarting the system. To clear the condition, press Ctrl, Alt, and Del simultaneously.

Clearing the condition may get the computer running, but it will not solve a resource conflict. Read the documentation that came with the conflicting device and [“Resolving a hardware conflict” on page 213](#).

The computer is not accessing the hard disk or the optional external diskette drive.

Your computer normally loads the operating system from the hard disk. If you have a hard disk problem, you will not be able to start the computer. Insert a system diskette into the optional external diskette drive and press F12 when the machine starts and use the arrow keys to select the boot-up device.

The computer displays the WARNING RESUME FAILURE message.

The computer was placed in Standby mode and the battery has discharged. Data stored in the computer’s memory has been lost. Data stored in the computer’s hard drive may not be affected.

Always save your data even when you are using Standby. If your battery fully discharges, information that has not been saved will be lost. Your computer can be configured to warn you when the battery is running low see [“What to do when the main battery runs low” on page 122](#).

If you are running on battery power, it is recommended that you do not leave the computer in Standby mode for long periods of time.

To charge the battery, leave the computer plugged into a live wall outlet for several hours. For more information see [“Charging batteries” on page 117](#).

The computer displays the Non-System disk or disk error message.

Make sure there is no diskette in the optional external diskette drive. If there is a diskette in the drive, remove it and press any key to continue. If pressing any key does not work, press Ctrl, Alt, and Del to restart the computer. For more information see [“The computer is not accessing the hard disk or the optional external diskette drive.” on page 209](#).

The Windows® operating system is not working

Once you are familiar with the desktop and used to the way the operating system responds to your work routine, you can easily detect if the operating system is not working correctly. For example:

- ❖ The operating system fails to start after the Starting Windows XP message appears.
- ❖ The operating system takes a long time to start.
- ❖ The operating system responds differently from the normal routine.
- ❖ The screen does not look right.

Unless a hardware device has failed, problems usually occur when you change the system in some way such as installing a new program or adding a device.

If you experience any of these problems, use the options in the Startup menu to fix the problem.

Using Startup options to fix problems

If the operating system fails to start properly, you may have to change your system's configuration or verify the startup procedure to fix the problem. To do this, use the options in the Startup menu.

To open the Startup menu:

- 1 Restart your computer.
- 2 Press F8 when your computer starts and before Windows starts loading.

The Windows® Advanced Options menu displays these options:

- ❖ Safe Mode
- ❖ Safe Mode (with Networking)
- ❖ Safe Mode (with Command Prompt)
- ❖ Enable Boot Logging
- ❖ Enable VGA Mode
- ❖ Last known good configuration (your most recent settings that worked)
- ❖ Directory Services Restore Mode (Windows® domain controllers only)
- ❖ Debugging Mode
- ❖ Start Windows® normally
- ❖ Reboot
- ❖ Return to OS Choices (menu)

See your Windows® documentation for further explanation.

NOTE

If your computer is connected to a network, the Startup menu may display different versions of Safe mode.

Internet problems

My Internet connection is very slow.

Many factors contribute to the speed with which you can surf the Internet. They include: modem speed, telephone line conditions, time of day (when everyone else is surfing, your access can be slow) and popularity of the sites you are trying to access. If accessing a particular site is very slow, try later.

My browser cannot find the URL address I typed in.

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character will make it impossible for your browser to locate the site.

My browser cannot find a site I bookmarked.

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may be down for temporary repair. Try again later.

The Windows® XP operating system can help you

If the operating system has started properly but you still have a problem using your computer, the online Help can assist you in troubleshooting the problem.

To access Windows® XP Help and Support:

- 1** Click **Start**, then click **Help and Support**.

The Help and Support window appears.

- 2** Then do one or both of the following:

- ❖ In the search field, type in the topic for which you need help and follow the on-screen instructions.
- ❖ Click a problem you would like help with from the listings and follow the on-screen instructions.

You can connect to Support Online by clicking **Support** from the menu or by going to pcsupport.toshiba.com.

Resolving a hardware conflict

If you receive an error message telling you there is a device driver conflict or a general hardware problem, try using Windows® Help and Support to troubleshoot the problem first.

For help on hardware conflicts:

- 1 Click Start, then click **Help and Support**.
- 2 Click the **Hardware** link in the window's left pane.
A list of category links appear.
- 3 Click the **Fixing a hardware problem** link.
- 4 Choose from specific topics and follow the steps.

If there is still a problem, the operating system should display a message that explains what the conflict is.

A plan of action

The smooth operation of the system depends on the interaction of all devices, programs, and features. If the system or one of its attached devices is not working, resolving the problem can be time-consuming and frustrating.

The recommended procedure for getting multiple devices to work together is to add and set up one device at a time. After you add each device, test it to make sure it and all previously connected devices work.

The device most recently connected to the system is the one most likely to be causing a hardware conflict.

Resolving hardware conflicts on your own

Computer components need resources to accomplish a task. A device, such as a disk drive or a modem, needs a channel to the computer's Central Processing Unit (CPU). It also needs a direct channel to the computer's memory to store information as it works. These channels of communication are commonly referred to as system resources.

Interrupt Request Channel

The channel to the CPU is called an Interrupt Request (IRQ) because it interrupts what the processor is doing and requests some of the processor's time. If two or more devices use the same IRQ, the processor does not know which device is asking for attention. This causes a hardware conflict.

Direct Memory Access

Similarly, the data required by the device is stored in a specific place or address in memory called the Direct Memory Access (DMA). The DMA provides a dedicated channel for adapter cards to bypass the microprocessor and access memory directly. If two or more devices use the same DMA, the data required by one device overwrites the data required by the other, causing a hardware conflict.

Plug and Play

With Plug and Play and the operating system, avoiding hardware conflicts is easy. Plug and Play is a computer standard that helps the system BIOS (basic input/output system) and the operating system to automatically assign system resources to Plug and Play-compliant devices. In theory, if every device connected to the computer is Plug and Play-compliant, no two devices will compete for the same system resources. Plug in the device and turn on your computer. The operating system is automatically set up to accommodate the new device.

If you install an older (legacy) device that the operating system cannot recognize, the operating system may have difficulty assigning resources to it. As a result, a hardware conflict can occur.

Resolving conflicts

There are several things you can do to resolve hardware conflicts:

- ❖ Get the most recent drivers from the manufacturer.
- ❖ Disable the device.

For an older device, remove it from the computer.

- ❖ Disable another system component and use its resources for the new device. See [“Fixing a problem with Device Manager” on page 215](#).
- ❖ Reconfigure the device so that its requirements do not conflict. Refer to the device’s documentation for instructions about changing settings on the device.

Fixing a problem with Device Manager

Device Manager provides a way to check and change the configuration of a device.

CAUTION

Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.

Disabling a device

- 1 Open the **Start** menu, and click **Control Panel**, then click **Performance and Maintenance**.
- 2 Click the **Administrative Tools** icon.
- 3 Double-click **Computer Management**, then click **Device Manager**.
- 4 Select the specific device from the device category. To expand a device category, double-click the category.
- 5 In the toolbar, look to the far right for an icon of a monitor with a strike mark through a circle on the front. This is the disable feature.
- 6 Click the icon.

You are given the option of disabling the device.

- 7 Click **Yes** to disable the device or **No** to cancel.

Checking device properties

Device Manager provides a way to view the properties of a device. Properties include the name of the manufacturer, the type of device, the drivers installed, and the system resources assigned to the device.

To check a device's properties:

- 1 Open the **Start** menu, and click **Control Panel**, then click **Performance and Maintenance**.
- 2 Click the **Administrative Tools** icon.
- 3 Double-click **Computer Management**, then click **Device Manager**.
- 4 To view the device(s) installed, double-click the device type.
- 5 To view the properties, double-click the device.

The operating system displays the Device Properties dialog box, which provides an array of tabs. They may include:

- ❖ The **General** tab, which provides basic information about the device.
- ❖ The **Resource** tab, which lists resources assigned to the monitor, optional external DVD-ROM, optional external diskette drive, and other power-using functions. This tab does not appear if the device is not using resources.
- ❖ The **Driver** tab, which displays the drivers being used by the device.

The tabs that appear in the dialog box vary from one device to another. A Troubleshooting button is also present.

6 Click **Troubleshoot...**

A Help and Support window for that device appears.

For more information about Device Manager, refer to Windows® XP online help.

Memory problems

Incorrectly connected or faulty memory modules may cause errors that seem to be device-related. It is worthwhile checking for these first:

- 1 Click **Start, Turn off computer.****
- 2 Click **Turn Off.****

The operating system shuts down and turns off the computer automatically.

- 3 Remove the memory module, following the instructions in [“Removing a memory module” on page 64.](#)**
- 4 Reinstall the memory module, following the instructions in [“Installing a memory module” on page 59,](#) and making sure the module is seated properly.**

-
- 5 Check for the error again.
 - 6 If the error recurs, remove the memory module entirely and check for the error again.

If removing the memory module eliminates the error, the memory module may be faulty. If the error recurs without the memory module installed, the error is not caused by the memory module.

TECHNICAL NOTE: You must have at least one memory module installed for the computer to work.

Power and the batteries

Your computer receives its power through the AC adapter and power cord/cable or from the system batteries (battery, optional high-capacity battery and real-time clock (RTC) battery). Power problems are interrelated. For example, a faulty AC adapter or power cord/cable will neither power the computer nor recharge the batteries.

Here are some typical problems and how to solve them:

The AC power light does not come on when you plug in the AC adapter and power cord/cable.

Make sure the AC adapter and power cord/cable are firmly plugged into both the wall outlet and the computer.

If the AC power light still does not come on, check that the wall outlet is working properly by plugging in a lamp or other appliance.

The AC adapter and power cord/cable work correctly, but the battery will not charge.

The battery does not charge while the computer is consuming full power. Try turning off the computer.

The battery may not be inserted correctly in the computer. Turn off the computer, remove the battery, clean the contacts with a soft dry cloth (if necessary) and replace the battery. See [“Removing the battery from the computer” on page 126](#).

The battery may be too hot or too cold to charge properly. If you think this is the probable cause, let the battery reach room temperature and try again.

If the battery has completely discharged, it will not begin charging immediately. Leave the AC adapter and power cord/cable connected, wait 20 minutes and see if the battery is charging.

If the battery light is glowing after 20 minutes, let the computer continue charging the battery for at least another 20 minutes before you turn on the computer.

If the battery light does not glow after 20 minutes, the battery may have reached the end of its useful life. Try replacing it.

The battery appears not to power the computer for as long as it usually does.

If you frequently recharge a partially charged battery, it may not charge fully. Let the battery discharge completely, then try charging it again.

Check the power options using the Power Management utility. Have you added a device, such as a PC Card or memory module, that takes its power from the battery? Is your software using the hard disk more? Is the display power set to turn off automatically? Was the battery fully charged to begin with? All these conditions affect how long the charge lasts.

After a period of time, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is normal for all batteries. To purchase a new battery pack, see your accessories information that shipped with your computer, or visit the Toshiba Web site at accessories.toshiba.com. Refer to this site often to stay

current on the most recent software and hardware options for your computer, and for other product information.

For more information on maximizing battery power see [“Charging batteries” on page 117](#).

Keyboard problems

If, when you type, strange things happen or nothing happens, the problem may be related to the keyboard itself.

The keyboard produces unexpected characters.

A keypad overlay may be on. If the numlock light or cursor control mode light is on, press Fn and F10 simultaneously to turn off the cursor control mode light or Fn and F11 simultaneously to turn off the numlock light.

If the problem occurs when both the keypad overlays are off, make sure the software you are using is not remapping the keyboard. Refer to the software documentation and check that the program does not assign different meanings to any of the keys.

You have connected an external keyboard and the operating system displays one or more keyboard error messages.

The keyboard you connected may be defective or incompatible with the computer. Try using a different make of keyboard.

Nothing happens when you press the keys on the external keyboard.

You may have plugged the external keyboard in while the computer was turned on. Click **Start**, **Shut Down** or **Turn off computer**, and **Restart the computer** using the TouchPad on the internal keyboard. The computer will restart and recognize the device.

Display problems

Here are some typical display problems and their solutions:

The screen is blank.

Display Auto Off may have gone into effect. Press any key to activate the screen.

You may have activated the instant password feature by pressing Fn and F1 simultaneously. If you have registered a password, press any key, type the password and press Enter. If no password is registered, press any key. The screen reactivates and allows you to continue working.

If you are using the built-in screen, make sure the display priority is not set for an external monitor. To do this, press Fn and F5 simultaneously (once). If this does not correct the problem, press Fn and F5 simultaneously again to return the display priority to its previous setting.

HINT: Holding the Fn key and pressing the F5 key several times will advance you through the display options.

If you are using an external monitor:

- ❖ Check that the monitor is turned on.
- ❖ Check that the monitor's power cord/cable is firmly plugged into a working power outlet.
- ❖ Check that the cable connecting the external monitor to the computer is firmly attached.
- ❖ Try adjusting the contrast and brightness controls on the external monitor.
- ❖ Press Fn and F5 simultaneously to make sure the display priority is not set for the built-in screen.

The screen does not look right.

You can change the display settings by clicking a blank area of the desktop with the secondary control button, then clicking **Properties**. This opens the Display Properties dialog box. The Appearance tab of this dialog box allows you to choose the colors for the screen. The Settings tab allows you to choose the screen resolution.

The built-in screen flickers.

Some flickering is a normal result of the way the screen produces colors. To reduce the amount of flickering, try using fewer colors.

To change the number of colors displayed:

- 1 Point at the desktop and click with the secondary button.
- 2 Click **Properties**, and then the **Settings** tab.
- 3 Change the Colors option and click **OK**.

For more information see Windows® Help.

A message tells you that there is a problem with your display settings and that the adapter type is incorrect or the current settings do not work with your hardware.

Reduce the size of the color palette to one that is supported by the computer's internal display.

To change the display properties:

- 1 Point at the desktop and click with the secondary button.

The Display Properties window appears.

- 2 Click **Properties**, then click the **Settings** tab.
- 3 Adjust the screen resolution and/or color quality.
- 4 Click **OK**.

The display mode is set to Simultaneous and the external display device does not work.

Make sure the external monitor is capable of displaying at resolutions of 800 x 600 or higher. Devices that do not support this resolution will only work in Internal/External mode, and not simultaneous mode.

Small bright dots appear on your TFT display when you turn on your computer.

Small bright dots may appear on your screen display when you turn on your PC. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

Disk drive problems

Problems with the hard disk or with a diskette drive usually show up as an inability to access the disk or as sector errors. Sometimes a disk problem may cause one or more files to appear to have garbage in them. Typical disk problems are:

You are having trouble accessing a disk, or one or more files appear to be missing.

Make sure you are identifying the drive by its correct name (A: or C:).

Error-checking

Run Error-checking, which analyzes the directories, files and File Allocation Table (FAT) on the disk and repairs any damage it finds:

To run Error-checking:

- 1 Click **Start**, then click **My Computer**.
- 2 Right-click the drive you want to check.
- 3 On the pop-up menu, click **Properties**.

The drive's Properties box appears.

NOTE

This feature is not available for CD/DVD drives.

- 4 Click the **Tools** tab.
- 5 Click the **Check now** button.
The Check Disk All Apps box appears.
- 6 You can choose one or both options:
 - ❖ Automatically fix file system errors
 - ❖ Scan for and attempt recovery of bad sectors
- 7 Click **Start**.

Error-checking tests and repairs the disk.

Your hard disk seems very slow.

If you have been using your computer for some time, your files may have become fragmented. Run Disk Defragmenter. To do this, click **Start**, then click **All Programs**, point to **Accessories** and **System Tools**, and click **Disk Defragmenter**.

Your data files are damaged or corrupted.

Refer to your software documentation for file recovery procedures. Many software packages automatically create backup files.

You may also be able to recover lost data using utility software. Consult your network administrator.

Some programs run correctly but others do not.

This is probably a configuration problem. If a program does not run properly, refer to its documentation and check that the hardware configuration meets its needs.

A diskette will not go into the optional external diskette drive.

You may already have a diskette in the drive. Make sure the drive is empty.

You may be inserting the diskette incorrectly. Hold the diskette with the hub side facing down, and insert it so that the metal head window cover goes into the drive first.

The metal cover or a loose label may be obstructing the path into the drive. Carefully inspect the diskette. If the metal cover is loose, replace the diskette. If the label is loose, replace the label and try inserting the diskette again.

The computer displays the Non-system disk or disk error **message.**

If you are starting the computer from a diskette, the diskette in the drive does not have the files necessary to start the computer. Replace it with a bootable diskette.

The drive cannot read a diskette.

Try another diskette. If you can access the second diskette, the first diskette (not the drive) is probably causing the problem. Run Error-checking on the faulty diskette (for instructions see [“Disk drive problems” on page 223](#)).

DVD-ROM or multi-function drive problems

You cannot access a disc in the drive.

If the DVD-ROM or multi-function drive is an external drive, make sure that the drive's cable is properly connected to the computer.

Make sure the tray which holds the CD-ROM or DVD-ROM is closed properly. Press gently until it clicks into place.

Open the tray and remove the disc. Make sure the tray is clean. Any dirt or foreign object can interfere with the laser beam.

Examine the disc to see if it is dirty. If necessary, wipe it with a clean cloth dipped in water or a neutral cleaner.

Replace the disc in the tray. Make sure that the disc is lying flat, label side uppermost. Close the tray carefully, making sure it has shut completely.

You press the disc eject button, but the drive tray does not slide out.

Make sure the computer is connected to a power source and turned on. The DVD-ROM drive eject mechanism requires power to operate.

Make sure a program is not accessing the drive and preventing it from ejecting.

If you need to remove a disc and cannot turn on the computer (for example, if the battery is completely discharged), use a narrow object, such as a straightened paper clip, to press the manual eject button. This button is in the small hole next to the DVD-ROM eject button on the face of the DVD-ROM tray.

CAUTION

Never use a pencil to press the manual eject button. Pencil lead can break off inside the computer and damage it.

Some discs run correctly but others do not.

Check the type of disc you are using. The DVD-ROM drive supports the Digital Versatile Disc (DVD) formats DVD-ROM, DVD-R (read-only), plus CD-ROM, CD-R (read-only), and CD-RW (read-only).

If the problem is with a data CD or DVD, refer to the software's documentation and check that the hardware configuration meets the program's needs.

The disc will not come out of the drive when you click the eject button on the screen.

Press the button on the DVD-ROM drive itself. For additional information see [“You press the disc eject button, but the drive tray does not slide out.”](#) on page 226.

Sound system problems

You do not hear any sound from the computer.

Adjust the volume control.

Try pressing Fn + Esc to see if volume mute is disabled.

If you are using external headphones or speakers, check that they are securely connected to your computer.

The computer emits a loud, high-pitched noise.

This is feedback between the microphone and the speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud. Adjust the volume control.

PC Card problems

PC Cards (PCMCIA-compatible) include many types of devices, such as a removable hard disk, additional memory, or a pager.

Most PC Card problems occur during installation and setup of new cards. If you are having trouble getting one or more of

these devices to work together, several sections in this chapter may apply.

Resource conflicts can cause problems when using PC Cards. See [“Resolving a hardware conflict” on page 213](#).

Card Information Structure

When you insert a PC Card into a slot, the computer attempts to determine the type of card and the resources it requires by reading its Card Information Structure (CIS). Sometimes the CIS contains enough information for you to use the card immediately.

Other cards must be set up before you can use them. Use the Windows® XP PC Card (PCMCIA) Wizard to set up the card. Refer to your Microsoft® documentation for more information, or refer to the documentation that came with the PC Card.

Some card manufacturers use special software called *enablers* to support their cards. Enablers result in nonstandard configurations that can cause problems when installing the PC Card.

If your system does not have built-in drivers for your PC Card and the card did not come with an operating system driver, it may not work under the operating system. Contact the manufacturer of the PC Card for information about using the card under the operating system.

PC Card checklist

- ❖ Make sure the card is inserted properly into the slot.
- ❖ Make sure all cables are securely connected.
- ❖ Occasionally a defective PC Card slips through quality control. If another PCMCIA-equipped computer is available, try the card in that machine. If the card malfunctions again, it may be defective.

Resolving PC Card problems

Here are some common problems and their solutions:

The slot appears to be dead. PC Cards that used to work no longer work.

Check the PC Card status:

- 1** Click **Start**.
- 2** Click **My Computer** icon with the secondary button, then click **Properties**.

The System Properties dialog box appears.

- 3** Click the **Hardware** tab.
- 4** Click the **Device Manager** button.
- 5** Double-click the **PCMCIA adapter**.
- 6** Double-click the appropriate PC Card.

The operating system displays your PC Card's Properties dialog box, which contains information about your PC Card configuration and status.

The computer stops working (hangs) when you insert a PC Card.

The problem may be caused by an I/O (input/output) conflict between the PCMCIA socket and another device in the system. Use Device Manager to make sure each device has its own I/O base address. See [“Fixing a problem with Device Manager” on page 215](#) for more information.

Since all PC Cards share the same socket, each card is not required to have its own address.

Hot swapping (removing one PC Card and inserting another without turning the computer off) fails.

Follow this procedure before you remove a PC Card:

- 1 Double-click the **PC Card** icon on the taskbar.
- 2 Click **Safely remove xxxx**, where xxxx is the identifier for your PC Card.

The operating system displays a message that you may safely remove the card.

- 3 Remove the card from the slot.

CAUTION

Never swap modules when the computer is in Hibernation or Standby mode. This is known as “warm swapping” and is not supported with this computer. For more information on Hibernation and Standby modes see [“Using Hibernation” on page 107](#) and [“Using Standby” on page 110](#).

The system does not recognize your PC Card.

Refer to the PC Card documentation.

Removing a malfunctioning card and reinstalling it can correct many problems.

A PC Card error occurs.

Reinsert the card to make sure it is properly connected.

If the card is attached to an external device, check that the connection is secure.

Refer to the card’s documentation, which should contain a troubleshooting section.

Printer problems

This section lists some of the most common printer problems:

The printer will not print.

Check that the printer is connected to a working power outlet, turned on and ready (on line).

Check that the printer has plenty of paper. Some printers will not start printing when there are just two or three sheets of paper left in the tray.

Make sure the printer cable is firmly attached to the computer and the printer.

Run the printer's self-test to check for any problem with the printer itself.

Make sure you installed the proper printer drivers as shown in [“Connecting a printer” on page 76](#) or in the instructions that came with the printer.

You may have connected the printer while the computer is on. Disable Standby mode, turn off the computer, and turn off the printer. Turn the printer back on, make sure it is on line, then turn the computer back on.

Try printing another file. For example, you could create and attempt to print a short test file using Notepad. If a Notepad file prints correctly, the problem may be in your original file.

If you cannot resolve the problem, contact the printer's manufacturer.

The printer will not print what you see on the screen.

Many programs display information on the screen differently from the way they print it. See if your program has a print preview mode. This mode lets you see your work exactly as it will print. Contact the software manufacturer for more information.

Modem problems

This section lists common modem problems:

The modem will not receive or transmit properly.

Make sure the cable from the modem to the telephone line is firmly connected to the computer's modem port and the telephone line jack.

Check the port settings to make sure the hardware and software are referring to the same COM port. See [“Determining the COM port” on page 152.](#)

Check the communications parameters (baud rate, parity, data length and stop bits) specified in the communications program. It should be set up to transmit at 300, 1200, 2400, 4800, 9600, 14400, 28800, 33600 bps (bits per second) or higher. Refer to the program's documentation and the modem manual for information on how to change these settings.

The modem is on, set up properly and still will not transmit or receive data.

Make sure the line has a dial tone. Connect a telephone handset to the line to check this.

The other system may be busy or off line. Try making a test transmission to someone else.

For more information regarding your system's V.92 modem, visit the Toshiba web site at pcsupport.toshiba.com.

Wireless networking problems

NOTE

This section provides general troubleshooting tips for networking problems, specifically wireless (Wi-Fi) networking.

The terms and concepts used assume a basic understanding of networks, and may be for more advanced users. If you need assistance or if you are not familiar with the terminology, please see Windows Help and Support or contact your computer technician.

- ❖ If your computer is equipped with an internal Wi-Fi adapter, verify that the Wi-Fi antenna switch is on (the wireless indicator light above the keyboard will be lit.)
-

NOTE

To determine if your computer has an internal Wi-Fi adapter, check the device list in Device Manager (part of the Windows Control Panel). Some Toshiba models may have a Wi-Fi antenna switch even though they do not have an internal Wi-Fi adapter.

- ❖ Verify that signal strength is good using the utility provided with the Wi-Fi adapter.
- ❖ If another computer is on the same network, verify that it has network access, and can connect to the Internet. If, for example, the other computer cannot browse to a public website, the ISP's (Internet Service Provider) service may be disrupted.
- ❖ Verify that the Service Set Identifier (SSID), or network name, is correct—i.e., that it matches the SSID assigned to the access point you are attempting to connect through. SSIDs are case-sensitive. Toshiba provides a Client Manager utility for setting and managing SSIDs.

- ❖ Check Control Panel's Device Manager to verify that the Wi-Fi adapter is recognized by Windows®, and that the driver is loaded. Carefully note any error messages—these will be very helpful if you should confer with a support technician at a later time.
- ❖ Verify that the network connection is configured to obtain its Internet Protocol (IP) address dynamically:
 - 1 Click **Start, Control Panel**.
 - 2 Double-click **Network Connections**.
 - 3 Right-click the name of your wireless network connection, then click **Properties**.
 - 4 Select **Internet Protocol (TCP/IP)**, then click **Properties**.
 - 5 Select **Obtain an IP address automatically**.
 - 6 Click **OK**, then click **Close**.
- ❖ Use IPCONFIG to verify that the computer has a useful IP address—one other than the private address of 169.254.xxx.xxx assigned by Windows.
 - ❖ Click **Start**, then click **Run...**
 - ❖ Enter **Cmd** and press **Enter**.
 - ❖ Enter "**IPCONFIG /ALL**" and press **Enter**.
 - ❖ The IP address for each active network adapter will be displayed.
- ❖ Connect your computer directly to your router or broadband modem, by plugging a standard CAT5 Ethernet patch cable (sold separately) into your computer's RJ45 Ethernet port. If your connection problem disappears, the problem lies in the Wi-Fi part of your network.

- ❖ Use the PING command to verify a connection to the gateway at 192.168.1.1 (a default gateway for most wireless routers).
 - ❖ Click **Start**, then click **Run...**
 - ❖ Enter **Cmd** and press **Enter**.
 - ❖ Enter **PING 192.168.1.1** at the command prompt, and press **Enter**.
 - ❖ If “Request Timed Out” or another error message appears in response, then the problem is probably Wi-Fi-related.
- ❖ If you have enabled any security provisions (closed system, MAC address filtering, Wired Equivalent Privacy (WEP), etc.), check the access point vendor's website for recent firmware upgrades. Problems with WEP keys, in particular, are frequently addressed in new firmware releases.

Special considerations for Windows XP

Wired Equivalent Privacy (WEP) encryption is not enabled on the wireless access point.

When you install a wireless access point device, Windows XP checks whether WEP encryption is enabled on the device. If it is not enabled, Windows XP adds the device to its list of available wireless networks, but does not create a wireless connection using the device, since the connection would not be secure. You can still, however, use the access point. To use an access point without WEP encryption, follow these steps:

- ❖ Right-click the Wireless Network icon in the System Tray (far-right portion of the Windows Taskbar).
- ❖ Click **View Available Wireless Networks**.
- ❖ Select **Allow me to connect to the selected wireless network, even though it is not secure**.
- ❖ Windows XP will now try to establish a wireless connection.

The Windows XP wireless management facility does not work.

If you are using an external Wi-Fi adapter (a PC Card, USB adapter, or other variety), check if the adapter comes with its own management utility. If it does, the utility may be disabling the Windows XP wireless management facility, in which case you must use the adapter's management utility. If the documentation that accompanies the adapter does not provide enough information to determine if this is the case, contact that vendor's support group for further advice.

DVD operating problems

If you experience a problem playing DVDs, you may be able to fix the problem yourself.

For general problems playing a DVD title, try the following steps:

- 1** If using an external DVD-ROM or multi-function drive, make sure the drive's cable is properly connected to the computer.
- 1** Verify that the disc is in a format that the drive supports.
- 2** Ensure that the disc is properly inserted in the drive tray.
- 3** Ensure that the Display properties are not True Color (24-bit). If it is set to 24-bit color, there may be a video format error. To verify your display settings:
 - ❖ Click **Start, Control Panel, Appearance and Themes**, and double-click **Display**.
 - ❖ Click on the **Settings** tab and check the **Color Palette**. It should be set to **High Color** (16-bit).
 - ❖ If it is not set to High Color, change the settings to **16-bit color** and click **OK**.
- 4** Clean the disc and try again.

A dirty drive can also cause audio problems. If you have tried several discs and all fail, consider sending your drive to an authorized service provider to get it cleaned.

- 5 Verify that your computer recognizes your DVD-ROM drive. To do this:

Double-click the **My Computer** icon on the desktop. The DVD-ROM drive should appear in the list.

- 6 See [“Checking device properties” on page 216](#) for instructions on using Device Manager to view the DVD-ROM properties.
- 7 Check the Toshiba Web site for new information on DVD-ROM drives and their operation.

A blank screen appears while watching a DVD-ROM movie or title.

Disable the Shut off Monitor feature in the Display Properties using the following steps:

- 1 Click the secondary mouse button on a blank area of the desktop.
- 2 Click **Properties**.
- 3 Click the **Screen Saver** tab.
- 4 Deselect **Shut off Monitor**.

Jumping video lines appear around the DVD-ROM video window.

To change the screen’s display resolution:

- 1 Click **Start, Control Panel**.
The Control Panel window appears.
- 2 Click **Appearance and Themes**, and double-click the **Display** icon.

The Display Properties dialog box appears.

- 3 Click the **Settings** tab.
- 4 Next to the words **Desktop Area**, move the slider to a lower setting, such as 800 x 600 or 640 x 480.
- 5 Click **OK**.

DVD titles, games, or applications appear distorted.

Having Stretch enabled when your video resolution is set to 640 x 480 or 800 x 600 can cause distortion. To disable Stretch, follow the instructions below:

- 1 Right-click the **Desktop**, select **Properties**.
- 2 Select the **Settings** tab.
- 3 Select the **Advanced Flat Panel** tab.
- 4 Click **Disable Display Stretch Feature**.
- 5 Click **OK**.

The screen saver runs while you are watching a movie or title.

If the screen saver is enabled, it runs on top of any movie or title you are watching. To disable the screen saver:

- 1 Click **Start, Control Panel**.
- 2 Click **Appearance and Themes**, and double-click the **Display** icon.

The Display Properties dialog box appears.

- 3 Click the **Screen Saver** tab.

In the Screen Saver list, the current screen saver is highlighted.

- 4 Click the down arrow at the right of the current screen saver name.

A list of screen savers displays.

- 5** Click and hold the up arrow by the list or move the slide to the top.
- 6** Click **None**.
- 7** Click **OK**.

Develop good computing habits

Save your work frequently.

You can never predict when your computer will lock, forcing you to close a program and lose unsaved changes. Many software programs build in an automatic backup, but you should not rely solely on this feature. Save your work! See [“Computing tips” on page 87](#) for instructions.

On a regular basis, back up the information stored on your hard disk.

Here are some ways you can do this:

- ❖ Copy files to diskette.
- ❖ Connect a tape drive to the system and use specialized software to copy everything on the hard disk to a tape.
- ❖ Connect your computer to the office network and copy files to your network partition.

Some people use a combination of these methods, backing up all files to tape weekly and copying critical files to diskette on a daily basis.

If you have installed your own programs, you should back up these programs as well as your data files. If something goes wrong that requires you to reformat your hard disk and start again, reloading all your programs and data files from a backup source will save time.

Read the user’s guides.

It is very difficult to provide a fail-safe set of steps you can follow every time you experience a problem with the

computer. Your ability to solve problems will improve as you learn about how the computer and its software work together.

Get familiar with all the user's guides provided with your computer, as well as the manuals that come with the programs and devices you purchase.

Your local computer store or book store sells a variety of self-help books you can use to supplement the information in the manuals.

Data and system configuration backup in Windows XP

Windows XP offers some easy-to-use features for backing up your Windows settings and your data – documents and other important files. Take advantage of these features to protect yourself from much more difficult and time-consuming restoration procedures, and to safeguard your valuable data from loss.

Saving system configuration with Restore Points

The System Restore feature of Windows XP quickly creates Restore Points—‘snapshots’ of your Windows configuration—and saves them for later recall. If you experience problems after installing some new hardware or software, you can easily select a previously established Control Point to ‘turn back the clock,’ restoring Windows to the state it was in just prior to the installation. This is much easier and more effective than uninstalling the hardware or software, which often leaves behind unwanted files and settings. It is also easy to undo a Restore Point selection, if you change your mind.

Follow these steps to create a Restore Point using the System Restore utility:

- 1 Click **Start**.
- 2 Click **Help and Support**.
- 3 Under **Pick a Task**, click **Undo changes to your computer with System Restore**.

-
- 4** Click **Create a restore point**, and then click **Next**.
 - 5** In the **Restore point description** field, enter a name that is descriptive enough to be easily understood in the future, such as “Before installing Brand X Accounting app.” Then click **Create**.
 - 6** Windows creates the Restore Point and automatically stamps it with the current date and time.

Then, at a later time, you can re-establish your Windows configuration using the saved Restore Point. To do this:

- 1** Click **Start**.
- 2** Click **Help and Support**.
- 3** Under **Pick a Task**, click **Undo changes to your computer with System Restore**.
- 4** Click **Restore my computer to an earlier time**, then click **Next**.
- 5** A calendar will be presented, showing a month at a time. Each date for which a Restore Point has been set will be marked as bold. When a boldfaced date is clicked, a description of the Restore Point will appear in a list to the right.

NOTE This list may contain Restore Points that you did not create. Restore Points labeled System Checkpoint were automatically created by Windows XP. Other Restore Points may have been created automatically by applications when they were installed.

- 6** Select the desired Restore Point from the list, and then click **Next**.
- 7** Your Windows configuration will now be restored to the state it was in when the chosen Restore Point was created.

Backing up your data to CDs with Windows XP

For most of us, by far the most valuable component of our computer system is the data we have created with it, and stored on its hard disk drive. Since problems with either hardware or software can make the data inaccessible or even destroy it, the next most valuable component of your computer system may be a recent backup of your data.

Fortunately, Windows XP offers a convenient way to back up your important data files to CDs, a relatively high-capacity storage media. No additional software is required. Most of the CD and DVD drives built into recent Toshiba portable computer models can write to (or ‘burn’) as well as read from CDs. External CD and DVD writers are also widely available.

Follow these steps to back up files in the **My Documents** folder to one or more CDs:

- 1 Put a blank CD-R (CD-recordable) disc into the computer’s CD or DVD drive.
- 2 A menu of options will appear. Select **Open writable CD folder using Windows Explorer**, and click **OK**.
- 3 A Windows Explorer window will open for the blank CD. This window will be referred to as “the CD window.”
- 4 Open a second Windows Explorer window, by clicking **Start**, then **My Computer**.
- 5 In this second window, browse to the files you wish to back up. Click the down-pointing arrow at the upper right of the window (to the left of the **Go** button) to see a list of locations that includes **My Documents**—a likely location of your data.
- 6 Drag and drop folders or individual files from this window into the CD window. If the files do not immediately appear in the CD window, press **F5** (or click **View, Refresh**) to prompt Windows to display them.

-
- NOTE** Documents and other data files that you create as you work are typically stored in the My Documents folder. You may also wish to back up other important data files stored elsewhere on your hard disk drive, for example:
- ❖ E-mail files and settings—for Outlook, Outlook Express, or other e-mail apps. Visit the vendors' Web sites (www.microsoft.com, for example) for detailed instructions.
 - ❖ Newsgroup files and settings—for Outlook Express, or other newsgroup readers. Visit the vendors' Web sites for detailed instructions.
 - ❖ Other data files. If you do not find an application's data files in any of the folders within the My Documents folder, check the application's options or preferences settings to discover the locations of the files.
-

- 7 When you have finished copying files to the CD window, click **File, Write these files to CD**.
- 8 A CD Writing Wizard will appear, prompting for a name for the CD. You may accept the default name, or enter a new (more descriptive) name. Click **Next** to continue.
- 9 The CD Writing Wizard will now write the selected files to the CD. It is best not to use the computer for any other tasks during this operation, so as not to interrupt it.
- 10 Finally, click **Finish**. The CD will be ejected. It should contain all of the files you have selected, but you may easily verify this by placing the CD back into the drive, and viewing the list of files.

Favorites (bookmarks) for Internet Explorer and other Web browsers

Follow these steps to back up your Favorites for Internet Explorer (ver 5.0 or newer):

- 1 In Internet Explorer, click **File, Import and Export**.
- 2 The Import/Export Wizard will appear. Click **Next**.
- 3 Click **Export Favorites, Next**. (To restore the Favorites to the hard disk drive later you would select **Import Favorites** from this list.)
- 4 A list of your Favorites folders will appear, with the top-level Favorites folder selected (highlighted). Click **Next** to back up all of your Favorites, or select a particular Favorites folder to back up, then click **Next**.
- 5 In the Export Favorites Destination window, use the Browse button to browse to the **My Documents** folder. Click **Save** in the Select Bookmark file window, and then click **Next**.
- 6 Click **Finish**. The message “**Successfully exported favorites**” should appear.
- 7 Follow the steps above for backing up files from the **My Documents** folder to a CD.

Each CD has room for 650-700 megabytes of data. Follow this same set of steps any number of times to back up any number of files to as many CDs as is required to hold them.

Windows XP also includes a Backup utility, though it does not directly support writing to CDs. For more information, click **Start, Help and Support**, or start the Backup utility by clicking **Start, All Programs, Accessories, System Tools, Backup**.

General tips for installing hardware and software

Here are a few tips to help insure safe and easy installation of new hardware (printers, pointing devices, external hard drives, DVD writers, scanners, etc.) and software (applications like Microsoft Office and Adobe Photoshop, or utility software such as special toolbars for your web browser).

- ❖ Create a Restore Point (see [“Saving system configuration with Restore Points” on page 240](#)). Before installing anything, use the System Restore utility to set a Restore Point (see the section titled Restore Points). If anything goes wrong, you will then be able to easily restore Windows to the state it was in prior to the installation, undoing any changes the installation process introduced.
- ❖ Back up your critical data (see [“Backing up your data to CDs with Windows XP” on page 242](#)).
- ❖ Have your factory Restore/Reconfiguration CD(s) on hand in case you need any files from them.
- ❖ Do not guess; follow directions carefully! It is often necessary to run an installation utility first—before connecting a new hardware item to the computer. If the device is connected first, it may be very difficult to complete the installation successfully. Always carefully follow the installation instructions that accompany the hardware or software.
- ❖ Restart Windows. Always restart Windows after each installation, even if the installation utility does not prompt you to do so. This will insure that the installation is completed, and will clean up anything that the installation utility left behind.
- ❖ Do one installation at a time. If you have several new items to add to your computer system, install just one at a time, creating Restore Points immediately before each successive installation. This will make it much easier to determine the origin of any new problems. For best results, follow this sequence:

- 1 Back up critical data.
- 2 Create a Restore Point.
- 3 Install one item of hardware or software.
- 4 Restart Windows.
- 5 Use the new hardware or software for a while, noting any new problems. Make sure that your critical applications (e-mail, business apps, etc.) are working correctly, and verify that important devices are still functioning.
- 6 For each additional hardware or software item, repeat these steps, starting at step 1 if any of your critical data has changed, or starting at step 2 if no critical data has changed.

If you need further assistance

If you have followed the recommendations in this chapter and are still having problems, you may need additional technical assistance. This section contains the steps to take to ask for help.

Before you contact Toshiba

Since some problems may be related to the operating system or the program you are using, it is important to investigate other sources of assistance first.

Try the following before you contact Toshiba:

- ❖ Review the troubleshooting information in your operating system documentation.
- ❖ If the problem occurs while you are running a program, consult the program's documentation for troubleshooting suggestions. Contact the software company's technical support group for their assistance.
- ❖ Consult the dealer from whom you purchased your computer and/or program. Your dealer is your best source for current information.

Detailed system specifications are available at www.ts.toshiba.com by selecting your particular product and model number, clicking **GO**, and then clicking the **Detailed Specs** link from the menu on the left, or just refer to the computer documentation shipped with your product.

For the number of a Toshiba dealer near you in the United States, call: (800) 457-7777.

Contacting Toshiba

If you still need help and suspect that the problem is hardware-related, Toshiba offers a variety of resources to help you.

Toshiba's Technical Support Website

For technical support, or to stay current on the most recent software and hardware options for your computer, and for other product information, be sure to regularly check the Toshiba Web site at pcsupport.toshiba.com.

Toshiba voice contact

Before calling Toshiba, make sure you have:

- ❖ Your computer's serial number
- ❖ The computer and any optional devices related to the problem
- ❖ Backup copies of your Windows® operating system and all other preloaded software on your choice of media
- ❖ Name and version of the program involved in the problem along with its installation media
- ❖ Information about what you were doing when the problem occurred
- ❖ Exact error messages and when they occurred

For technical support, call the Toshiba Global Support Centre:

Within the United States at (800) 457-7777

Outside the United States at (949) 859-4273

Appendix A

Hot Keys

Hot keys are keys that, when pressed in combination with the Fn key, turn system functions on and off. Hot keys have a legend on the key indicating the option or feature the key controls.

Volume Mute

This hot key enables/disables volume mute on your computer.

When volume mute is enabled, no sound will come from the speakers or headphones.

Password security

This hot key blanks the display.

Without a password

The Fn + F1 key combination turns off the display and activates instant security. Using the pointing device or any key will make the display's content reappear, if no password is set for the current user.

With a password

The Fn + F1 key combination turns off the display and activates instant security.

If you set a blank screen saver, pressing the Fn + F1 key combination to activate instant security will cause the screen to go blank. Using the pointing device or any key will make the display's content reappear. The Windows® operating system log-on screen will appear, prompting you for a password. After typing in the password for the current user, press Enter.

To activate the password feature:

- 1 Click **Start, Control Panel**, then click **Appearances and Themes**.
- 2 Click one of the following:
 - ❖ **Choose a screen saver** in the “Pick a task” section
 - ❖ **Display** in the “or pick a Control Panel icon” section

The Display Properties window appears.

- 3 If you clicked **Choose a screen saver**, the Screen Saver tab has already been selected. If it is not selected, click the **Screen Saver** tab.
- 4 Click the **On resume, password protected** check box.
- 5 Click **OK**.

Maintaining security when the battery is not fully charged

When the battery is not fully charged (even if the computer is operating on AC power) your display may reappear automatically after a short time. To protect your desktop, you must set up a screen saver with a password before activating the password feature.

To set up a password with a screen saver, go to Windows XP help for instructions:

- 1 Click **Start, Help and Support**.
- 2 In the **Search** field, type password screen saver.
- 3 Press Enter.
- 4 Click the **Protect your files with a screen saver password link** located under the suggested topics.

Follow the steps listed in the Windows help to set up your password-protected screen saver.

To ensure the password protection is activated after pressing Fn + F1 (to activate instant security), wait ten seconds before walking away from the computer.

Power usage mode

This hot key displays the power usage pop-up window and cycles through the battery save modes.

Sample power usage modes

The properties of each mode are set in the Toshiba Power Management utility. For more information, see [“TOSHIBA Power Saver” on page 169](#).

Standby mode

This hot key places the computer into Standby mode.

- ❖ A message box displays by default to confirm that the computer is entering Standby mode. You can choose not to display this message box.

Sample Standby confirmation box

- ❖ For more information about Standby mode, please see [“Using Standby” on page 110](#).

Hibernation mode

Fn +

This hot key places the computer into Hibernation mode.

- ❖ If Hibernation mode is enabled (the default) a message box displays by default to confirm the computer is entering Hibernation mode. You can choose not to display this message box.

Sample Hibernation confirmation box

- ❖ If Hibernation mode is disabled, this hot key will not respond. For more information on Hibernation mode, see [“Using Hibernation” on page 107](#).

Display modes

This hot key cycles through the power-on display options.

The display modes are:

- ❖ Built-in display only
- ❖ Built-in display and external monitor simultaneously
- ❖ External monitor only

Sample display options window

In order to use a simultaneous mode, you must set the resolution of the internal display panel to match the resolution of the external display device.

Display brightness

This hot key decreases the screen brightness.

This hot key increases the screen brightness.

Disabling or enabling wireless devices

This hot key enables and disables the optional wireless devices installed in your computer.

The wireless modes are:

- ❖ All disabled—This disables both the *Bluetooth*® and Wi-Fi® modules.
- ❖ Wi-Fi enabled—This enables just the Wi-Fi module.
- ❖ *Bluetooth* enabled—This enables just the *Bluetooth* module.
- ❖ All enabled—This enables both *Bluetooth* and Wi-Fi.

Disabling or enabling the TouchPad

This hot key enables/disables the TouchPad.

For more information on using the TouchPad, see [“Disabling or enabling the TouchPad” on page 81](#).

Sample disable and enable TouchPad windows

Keyboard hot keys

This hot key turns the cursor control overlay on and off.

This hot key turns the numeric overlay on and off.

This hot key turns the scroll lock feature on and off.

[Spacebar]

This hot key switches screen or video modes.

Zooming applications in/out

This hot key turns the Zooming utility to zoom-out. For more information, see [“TOSHIBA Zooming Utility”](#) on page 178.

This hot key turns the Zooming utility to zoom-in. For more information, see [“TOSHIBA Zooming Utility”](#) on page 178.

Appendix B

Power Cord/Cable Connectors

Your computer features a universal power supply you can use worldwide. This appendix shows the shapes of the typical AC power cord/cable connectors for various parts of the world.

Appendix C

Using ConfigFree™ with your Toshiba Computer

ConfigFree™ is a set of utilities that makes it easy to control communication devices and network connections. ConfigFree also lets you identify communication problems and create profiles for easy switching between locations and communication networks.

NOTE

For more information on using ConfigFree, see the ConfigFree online Help.

The ConfigFree utilities include the following:

- ❖ **Connectivity Doctor**—The Connectivity Doctor utility is used to analyze network connections and fix networking problems with your notebook computer. For more information, see [“Connectivity Doctor” on page 262](#).
- ❖ **Search for Wireless Devices**—The Search for Wireless Devices utility searches for wireless LAN and *Bluetooth*® devices used in the neighborhood, and displays information about them on a virtual map. For more information, see [“Search for Wireless Devices” on page 265](#).

- ❖ **Profile Settings**—The Profiles utility lets you switch between network configurations. For more information, see “[Profile Settings](#)” on page 270.
- ❖ **ConfigFree SUMMIT**—The ConfigFree SUMMIT utility is used to connect with other ConfigFree users for file sharing. For more information, see “[ConfigFree SUMMIT](#)” on page 274.

ConfigFree also includes a screen saver that you can customize by adding identifying text to devices. Click **Options** on the Connectivity Doctor screen to access the screen saver option.

Getting Started

This section contains information about the ConfigFree main screen, and how to start and set up ConfigFree.

For more detailed information on setting up and using ConfigFree, see the Help File included in the application.

Starting ConfigFree

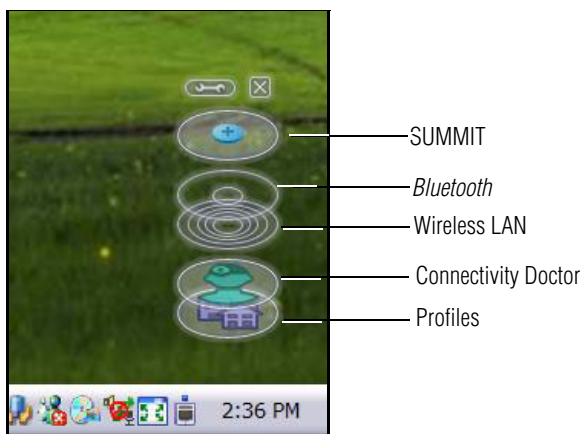

To start ConfigFree, be sure the computer has a wired or wireless connection. Then perform any of the following steps:

- ❖ (Microsoft® Windows® XP or 2000) Click the **Start** button, and select **All Programs, TOSHIBA, Networking, ConfigFree**.
- ❖ Double-click the **ConfigFree** icon  on the taskbar.
- ❖ Press the **TOSHIBA Assist** button (if applicable to your system) to open the TOSHIBA Assist, and then click the **ConfigFree** icon.
- ❖ Click the **ConfigFree** icon  on the taskbar, and then click the desired utility.

NOTE

If your computer is not connected to a network, the ConfigFree icon on the taskbar is displayed with an "X."

When you start a search for wireless devices, ConfigFree Launcher displays on your computer desktop. You can then click the appropriate icon on the Launcher to start the desired ConfigFree utilities.

Sample ConfigFree Launcher

ConfigFree Launcher can be set to hide from view when it is not in use. When this setting is active (set the ConfigFree Launcher to Auto-hide mode), you can re-display ConfigFree Launcher by moving the mouse cursor to the right of the screen.

Sample ConfigFree Launcher Auto-hide mode setting

Sample ConfigFree Launcher coming back into view

ConfigFree Utilities

Connectivity Doctor

The Connectivity Doctor lets you analyze your network connections and fix network-connection problems. Using Connectivity Doctor, you can view detailed network information by simply moving the mouse pointer.

The Connectivity Doctor works with the following network devices:

- ❖ Wired and wireless network devices
- ❖ Routers, hubs, and bridges
- ❖ Access points

The Connectivity Doctor displays the following information:

- ❖ WEP (Used, not Used)
- ❖ Wired connection line (link speed)
- ❖ Wireless connection line (signal strength and link speed)

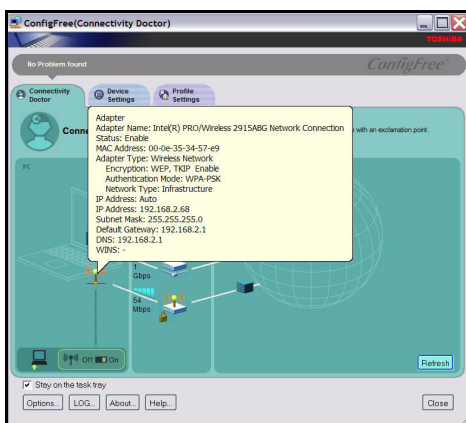

- ❖ Location of wireless communication switch (identified with a yellow arrow)
- ❖ Status of wireless communication switch (on or off)

- 1 Wired Network Devices
- 2 Wireless Network Devices
- 3 Router/Hub/Bridge
- 4 Access Point
- 5 Display if WEP key is set
This is not displayed if WEP is not set.
- 6 Wired Connection Line
Displays the link speed.
- 7 Wireless Connection Line
Displays the signal strength and link speed.
- 8 Location of wireless communication switch
Displayed with a yellow arrow.
- 9 Status of wireless communication switch
Displays whether the wireless communication switch is on or off.

Sample Connectivity Doctor screen

Moving the mouse pointer over a wired or wireless network device icon displays information about the device, such as its IP address, subnet mask, and MAC address. A wireless network device also shows information such as the network SSID and the device's Wired Equivalent Privacy (WEP) key settings.

Sample viewing device information

If a problem or potential problem is detected, in most cases, a screen automatically displays showing you the possible cause and solution for the problem.

A triangle containing an exclamation point also appears on the Connectivity Doctor screen and an orange frame describes the relevant location. You can also view the possible cause and solution for the problem by clicking the exclamation point. If multiple triangles display, you can toggle between each of their cause and solution information screens by clicking its exclamation point.

For example, if the connection to a wireless network cannot be established because the wireless communication switch is turned off, the problem description screen will normally display automatically when you start the Connectivity Doctor, and an exclamation point will appear next to the wireless communication switch.

The following checkboxes and buttons are provided on the Connectivity Doctor screen:

Stay on the task tray	When checked, the ConfigFree icon resides in the system tray.
Options	Displays ConfigFree setting screen.
Log	Lets you create a diagnostic log, view a history of log files, or delete the history. Log files are saved as CFhtmlxxxxx.htm, where xxxxx is the creation date and time. They reside in the folder: C:\Documents and Settings\username\Local Settings\Temp
About	Displays the version of Connectivity Doctor.
Help	Displays online help.
Close	Closes the Connectivity Doctor screen.

Search for Wireless Devices

The Search for Wireless Devices utility searches for wireless LAN and *Bluetooth* devices currently used in the neighborhood, and displays information about them on a virtual map.

To search for wireless devices:

- 1 Click the  icon in the system tray.
- 2 Click **Search for Wireless Devices**.

A virtual map appears with a graphical representation of the wireless devices that have been detected.

NOTE

Search for Wireless Devices can also be started from the ConfigFree Launcher.

For Wi-Fi networks, the intensity of a signal is displayed in five levels or “bands.” The signal from the connected access point is displayed in the bands surrounding the PC icon at the center of the map. The closer to the center, the stronger the connection. Placing the pointer over the displayed “point of light” shows detailed information about the wireless device.

NOTE

The wireless device shown near the center of the map is not necessarily near your notebook computer. If a wireless device located a distance away also has a strong signal, it appears near the center of the map as well.

The Search for Wireless Devices feature identifies if a device is IEEE 802.11a, b, or g. It also includes an option to display hidden access point availability.

Sample viewing Wi-Fi devices

Creating a new wireless connection

NOTE

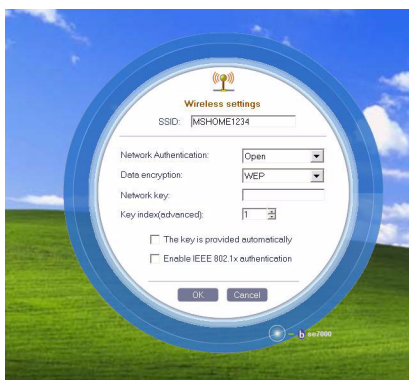

This feature is only supported on systems running Windows XP SP2.

To add a new wireless connection to an Access Point:

- 1 Open the Search for Wireless Devices option from ConfigFree Launcher.
- 2 Drag and drop the device you want to connect to the PC icon at the center of the map. The Wireless Settings screen appears.

Sample dragging a device to the Access Point

Sample Wireless settings screen

- 3 Enter the SSID/WEP information and connect to the device.

NOTE

After the Access Point is set up and added to the connection list, the system displays the Connection screen rather than the Wireless settings screen.

Creating a detected device wireless connection

The following screen shows an example of *Bluetooth* devices that are detected using the **Search for Wireless Devices** option. Moving the mouse cursor over a device icon displays information about the device.

Sample viewing Bluetooth devices

You can connect to devices shown on the *Bluetooth* map:

- 1 Drag and drop the device you want to connect to the PC icon at the center of the map.
- 2 Configured devices are automatically connected. Devices not yet configured launch the Add New Connection Wizard, where you can configure and connect to the device.

Transferring files using *Bluetooth*

There are several ways to use *Bluetooth* to send files to other devices.

To select the device using the *Bluetooth* radar screen:

- ❖ Open the *Bluetooth* radar screen, and drag and drop the file directly onto the icon for that *Bluetooth* device.

Sample dragging the file to the Bluetooth device icon

To be prompted for the device:

- 1 Drag and drop the file to the *Bluetooth* radar icon on the ConfigFree Launcher.

Sample dragging the file to the Bluetooth radar icon

Or, you can right click on the file and select **Send to Bluetooth Devices**.

Sample selecting Send to Bluetooth Devices option

- 2** Choose a file recipient.
- 3** Click **Send**.

NOTE

During a file transfer, connecting and disconnecting to the selected device will occur automatically.

Disconnecting from a *Bluetooth* device

To disconnect from a *Bluetooth* device:

- 1** Place the cursor on top of the connected line. The icon changes to a pair of scissors.
- 2** Click to disconnect from the device.

Profile Settings

The Profile Settings utility lets you save network settings in “profiles.” ConfigFree profiles are useful for easily switching network settings and devices. You can switch network settings simply by selecting the profile with the desired settings.

If you visit a client company occasionally, for example, you can set up a profile to match that environment and connect to the network. Similarly, users who access networks in the

office and at home can set up profiles to handle these networking environments.

A profile contains the currently configured network settings on the computer, as well as information about any network devices. The following settings can be saved (or “captured”) in a profile:

- ❖ **Internet settings** — includes LAN settings (proxy server settings) and the address of a home page that opens automatically when Internet Explorer starts.
- ❖ **Devices** — lets you enable or disable settings of wired and wireless network devices, infrared devices, and set the power status of *Bluetooth* antennas.
- ❖ **TCP/IP settings** — includes DHCP, IP address, subnet mask, default gateway, DNS server, and WINS server settings.
- ❖ Personal firewall settings for Internet connections.
- ❖ Dial-up connection settings for the default connection.
- ❖ File and printer sharing settings.
- ❖ Printer settings for the default printer.
- ❖ *Bluetooth* Security Level (for example, high or medium).

To create a profile:

- 1 Click the  icon in the system tray.
- 2 Move the pointer to **Profile**.
- 3 Click **Add**. The Add Profile screen appears.
- 4 Select **Capture** and click **OK**. The Add Profile screen appears.
- 5 Enter the name of the profile you want to create.
- 6 Enter any optional comments, if desired.
- 7 Click **Change Icon** and select an icon for this profile.

- 8 Click the  icon at the bottom of the screen to display more capture options.
- 9 Under **Captured Items**, select the items you want to capture for this profile.
- 10 If connecting with a wireless network, select the desired **Auto Switch Settings**. (These options are unavailable if wireless devices have been disabled.)
- 11 Under **Execute this program after switching**, click the **Browse** button and select the program, file, or Web site URL that is to start after switching to this profile.

For example, to have Internet Explorer start in Windows XP after switching profiles, type:

C:\Program Files\Internet Explorer\IEXPLORE.EXE

- 12 Click **OK**.

Press to show more capture options

Sample Add Profile screen

Sample expanded Add Profile screen

NOTE

The online help provides real-world examples of setting up profiles for different networking environments.

After you set up one or more profiles, you can check their settings and fine-tune them as necessary. Profiles can also be imported and exported. This feature is useful when transferring profile settings to other computers. For more information about modifying, importing, and exporting profiles, refer to the online help.

ConfigFree SUMMIT

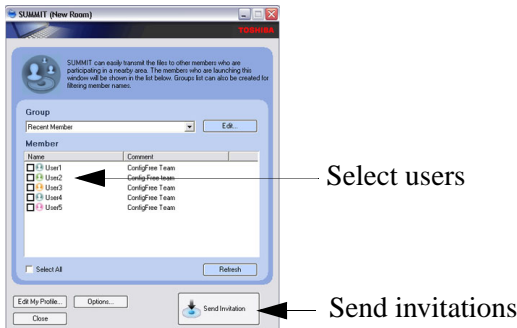

The ConfigFree SUMMIT utility is a convenient way to share files with other users and to transfer files between your computers at home and at work. This utility is faster and more dependable than sending the files via email.

Use this utility, which handles files regardless of size, to distribute presentations, reports, or music files to meeting attendees or to users at different locations.

The SUMMIT utility uses the following types of connections:

- ❖ Wireless LAN via Access Point
- ❖ Wireless LAN via Ad-Hoc
- ❖ LAN (same subnet)
- ❖ Bluetooth PAN/LAP
- ❖ Cross cable (Ethernet or Gbit Ethernet)

To host a ConfigFree SUMMIT, click the SUMMIT icon on the ConfigFree Launcher, select the users that you want to attend the SUMMIT meeting, and send them an invitation.

Sample of inviting users to SUMMIT meeting

When a user joins the SUMMIT, their icon appears on the SUMMIT table.

Sample of users attending SUMMIT meeting (user icons appear on SUMMIT table)

Files can be shared with one user or all users attending the meeting.

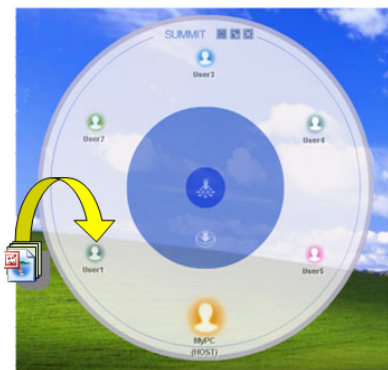

- ❖ To share a file with one user, drag and drop the file on the user's icon.

NOTE

Only the SUMMIT Host (the initiator) can share files with multiple users by this method. SUMMIT users can share a file with only one other user.

276 Using ConfigFree™ with your Toshiba Computer

ConfigFree Utilities

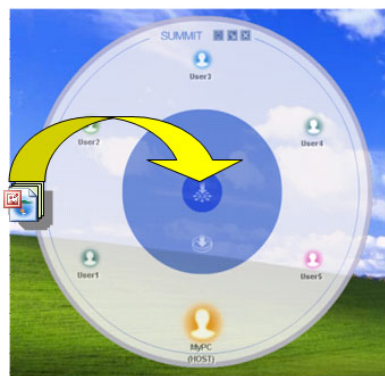

Sample of sharing a file with one user

- ❖ To share a file with all users, drag the file to the center of the SUMMIT table where users can access it as desired.

NOTE

If you are the Host of the summit, and drag a file to the center of the SUMMIT table, it will automatically be sent to all SUMMIT users who can then accept or decline the file as desired.

Sample of sharing a file with all users

NOTE

Participating users must be connected by LAN, wireless LAN, or *Bluetooth* (PAN). Firewall software may prevent ConfigFree SUMMIT from working.

Using ConfigFree SUMMIT

To host a ConfigFree SUMMIT:

- 1 Click the  icon in the system tray.
- 2 Click **SUMMIT**. Other users appear on the SUMMIT main window.

NOTE

SUMMIT can also be started from the ConfigFree Launcher.

- 3 Select the appropriate users and invite them to the SUMMIT meeting. As users join the SUMMIT, their icons appear on the SUMMIT table.
- 4 Use drag and drop to share documents with SUMMIT users:
 - ❖ To share a file with one user, drag the file to the user's icon.
 - ❖ To share a file with all users, drag the file to the center of the summit table.

There are other ways to send files to users.

To send files to all SUMMIT users:

- 1 Right click on the file and select **Send to SUMMIT Devices**.
- 2 Click **Send**.

To send files to a user without creating a SUMMIT meeting:

- 1 Drag and drop the file to the Wireless radar icon on the ConfigFree Launcher.
- 2 Right click on the file and choose a file recipient.
- 3 Click **Send**.

An Access Point may not always be available. To find out how to use Quick Connect to launch ConfigFree Summit, see [“Direct Link Toshiba Device” on page 280](#).

Quick Connect

The Quick Connect feature includes two options:

- ❖ **Toshiba Wireless Projector.** Switches the Wireless LAN connection to connect to a Toshiba Wireless Projector
- ❖ **Direct Link Toshiba Device.** Launches ConfigFree SUMMIT

Toshiba Wireless Projector

The Quick Connect feature switches the Wireless LAN connection to connect to a Toshiba Wireless Projector. Once the projector utility is installed, launching the Quick Connect utility automatically opens the Wireless Data Projector Application. There you can configure how you would like to use the projector.

To connect to a Toshiba Wireless Projector:

- 1 Click the  icon in the system tray.
- 2 Move the mouse pointer to **Toshiba Wireless Projector (DPJ)**, then click **Connect**.

Launching Quick Connect prevents you from using the network to connect to a Toshiba Wireless Projector when the wireless LAN Configuration is set to Ad hoc. If you are connected to an access point, the connection is broken and re-established later.

To review the current Toshiba Wireless Projector settings and change them if necessary:

- 1 Click the  icon in the system tray.
- 2 Move the mouse pointer to **Toshiba Wireless Projector (DPJ)**, then click **Settings**. The Quick Connect properties dialog box appears.
- 3 Complete the settings. Refer to the online help if necessary.
- 4 Click **OK**.

NOTE

The default connection setting is for Ad hoc mode, therefore, if the setting on the Toshiba Wireless Projector is in Infrastructure mode, it will not connect. However, you can change the settings to Infrastructure mode to match the settings on the projector.

Sample Projector icon when connected with Quick Connect

If the wireless mode for the wireless setting is set for 5 GHz (802.11a), Quick Connect changes this mode to 2.4 GHz (802.11b) and then connects to the projector.

The wireless LAN configuration returns to the settings that were last used before the Quick Connect function was started:

- ❖ If the Toshiba Wireless Projector utility is closed.
- ❖ If you select Toshiba Wireless Projector (DPJ) from the ConfigFree tray menu (this disconnects the wireless LAN connection).
- ❖ If you select a profile from the ConfigFree tray menu or when you disable a wireless device.
- ❖ If you close ConfigFree.

Direct Link Toshiba Device

When Access Point is not available, use the Direct Link Toshiba Device feature to connect your computer in ad-hoc (peer-to-peer) mode and use the Summit feature.

To use this feature:

- 1 Display the ConfigFree menu.
- 2 Select the ConfigFree Link option from the Direct Link Toshiba Device submenu. This action switches the computer's wireless network setting to ad-hoc mode, and launches the SUMMIT feature.

Sample using the Direct Link Toshiba Device feature

Using the Automatic Switch

The Automatic Switch feature allows the computer to automatically switch profiles the next time it is powered on. This feature is particularly useful if you want your computer to automatically switch from the network configuration you use in your office to the one you use at home.

The Auto Switch feature contains options for automatically switching between wired and wireless devices. With these options, the computer automatically switches to a wireless LAN network when the cable of the wired LAN network is removed from the computer. When the cable is reconnected, the connection to the wired LAN is re-established.

To use the Automatic Switch feature:

- 1 Right-click the  icon in the system tray.
- 2 Click **Auto Switch**. The Auto Switch dialog box appears.
- 3 Check **Enable Wireless when cable disconnect occurs**.
- 4 Click **OK**.

NOTE

If your computer is connected to multiple wireless LAN devices, the Auto Switch (SSID) feature is disabled. To enable this feature, only one wireless LAN device can be used.

Semi-Automatic Switch Feature

The Semi-Automatic feature alerts you when the computer connects to a Service Set Identifier (SSID) stored in a profile. When the computer connects to the designated SSID, a notification window appears. You can then click this window to connect using the settings specified in the profile.

To use the Semi-Automatic Switch feature:

- 1 Right-click the  icon in the system tray.
- 2 Click **Auto Switch**. The Auto Switch dialog box appears.
- 3 Select the **Auto Switch (SSID)** tab.
- 4 Select the profile to be automatically selected when the SSID is detected, then click **Add**. The profile is moved to the **List of target SSIDs and profiles**.
- 5 Repeat the previous step for each additional profile you want to select.
- 6 Select **Automatically switch profiles when connected to this SSID**.
- 7 Check **Automatically switch profile when connected to this SSID**.
- 8 Click **OK**.

The computer is now configured to use the Semi-Automatic Switch feature. When the computer connects to an SSID in a profile, a display notification window appears. You can then click **Switch** on the window to switch profiles. You can also set the option for having the switch be automatic without the need for a notification.

NOTE

Several profiles can be defined for a single SSID. In this case, several notification windows are displayed. By clicking these windows, you can switch to the profile for that location.

Glossary

TECHNICAL NOTE: Some features defined in this glossary may not be available on your computer.

Acronyms

The following acronyms may appear in this user's guide.

AC	alternating current
BIOS	basic input/output system
bps	bits per second
CD	compact disc
CD-ROM	compact disc read-only memory
CD-RW	compact disc rewritable memory
CMOS	complementary metal-oxide semiconductor
COM1	communications port 1 (serial port)
COM2	communications port 2 (serial port)
CPU	central processing unit
DC	direct current

DMA	direct memory access
DIMM	dual inline memory module
DOS	disk operating system
DPI	dots per inch
DSTN	dual supertwist nematic
DVD	digital versatile (or video) disc
DVD-ROM	digital versatile (or video) disc read-only memory
ECP	enhanced capabilities port
EPROM	erasable programmable read-only memory
FAT	file allocation table
FCC	Federal Communications Commission
FIR	fast infrared
GB	gigabyte
HDD	hard disk drive
HTML	Hypertext Markup Language
IEEE	Institute of Electrical and Electronics Engineers
I/O	input/output
IRQ	interrupt request
ISP	Internet service provider
KB	kilobyte
LAN	local area network
LCD	liquid crystal display
LPT1	line printer port 1 (parallel port)
LSI	large-scale integration
MB	megabyte
MIDI	Musical Instrument Digital Interface
PC	personal computer
PCI	Peripheral Component Interconnect
PCMCIA	Personal Computer Memory Card International Association

RAM	random access memory
RFI	radio frequency interference
ROM	read-only memory
RTC	real-time clock
SCSI	small computer system interface
SDRAM	synchronous dynamic random access memory
SRAM	static random access memory
SVGA	super video graphics adapter
TFT	thin film transistor
USB	universal serial bus
URL	uniform resource locator
WAN	wide area network
www	World Wide Web

Terms

The following terms may appear in this user's guide.

A

active-matrix display — A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology. Also known as a “TFT display,” in its simplest form there is one thin film transistor (TFT) for each cell. This type of display works well with notebook computers because of its shallow depth and high-quality color. Active-matrix displays are viewable from wider angles than most passive-matrix displays.

adapter — A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector. An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

alternating current (AC) — The type of power usually supplied to residential and commercial wall outlets. AC reverses its direction at regular intervals. Compare *direct current (DC)*.

application — A computer program that you use to perform tasks of a specific type. Applications include word processors, spreadsheets, and database management systems. See also *program*.

B

backup — A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

basic input/output system (BIOS) — See *BIOS*.

baud rate — The speed at which a communication device, such as a printer or modem, transmits information. Baud rate is the number of signal changes per second (not necessarily the same as bits per second). See also *bits per second*.

BIOS (basic input/output system) — Basic instructions, stored in read-only memory (ROM), containing the information the computer needs in order to check hardware and load the operating system when you start up the computer.

bit — Short for “binary digit.” A bit is the smallest unit of information used by a computer. A group of eight bits is a byte. See also *byte*.

bits per second (bps) — A way of measuring the speed at which information is passed between two devices. The basic measure used in modem communications, bps is similar, but not identical, to the baud rate. See also *baud rate*.

boot — To start the computer. The term “boot” originates from bootstrap program (as in “pulling itself up by its bootstraps”), a program that loads and initializes the operating system. See also *reboot*.

boot disk — See *system disk*.

boot priority (startup sequence) — The order in which the computer accesses its disk drives to locate the startup files. Under the default startup sequence, the computer looks for the startup files in the diskette drive before checking the hard disk.

bus — An electrical circuit that connects the central processing unit (CPU) with other parts of the computer, such as the video adapter, disk drives, and ports. It is the pathway through which data flows from one device to another. See also *bus speed*, *frontside bus*.

bus speed — The speed at which the central processing unit (CPU) communicates with the other parts of the computer.

byte — A sequence of eight bits. A byte is the smallest addressable unit of data. See also *bit*, *gigabyte*, *kilobyte*, *megabyte*.

C

cache — A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also *CPU cache*, *L1 cache*, *L2 cache*.

CD — An individual compact disc. See also *CD-ROM*.

CD-ROM (compact disc read-only memory) — A form of high-capacity storage that uses laser optics instead of magnetic means for reading data. See also *CD*. Compare *DVD-ROM*.

central processing unit (CPU) — The chip that functions as the “brain” of the computer. It takes information from outside sources, such as memory or keyboard input, processes the information, and sends the results to another device that uses the information.

character — Any letter, number, or symbol you can use on the computer. Some characters are non-printing characters, such as a paragraph break in a word-processing program. A character occupies one byte of computer storage.

chip — A small piece of silicon containing computer logic and circuits for processing, memory, input/output, and/or control functions. Chips are mounted on printed circuit boards.

click — To press and release a TouchPad control button or mouse button. In the Windows® operating system, this refers to the left mouse button or TouchPad control button, unless otherwise stated. See also *double-click*.

color palette — A set of specified colors that establishes the colors that can be displayed on the screen at a particular time.

compatibility — The extent to which computers, programs, or devices can work together harmoniously, using the same commands, formats, or language as each other.

configuration — (1) The collection of components that make up a single computer system. (2) How parts of the system are set up (that is, configured).

controller — A device that controls the transfer of data from a computer to a peripheral device and vice versa. For example, disk drives, monitors, keyboards, and printers all require controllers.

CPU — See *central processing unit (CPU)*.

CPU cache — A section of very fast memory residing between the CPU and the computer's main memory that temporarily stores data and instructions the CPU will need to execute commands and programs. See also *cache*, *L1 cache*, *L2 cache*.

cursor — A symbol that indicates the current position on the screen. The shape of the cursor varies, depending on the program you're using and what you're doing.

D

default — The setting selected by a program when you do not specify an alternative setting.

device — A component attached to the computer. Devices may be external (outside the computer's case) or internal (inside the computer's case). Printers, disk drives, and modems are examples of devices.

device driver — A program (called a "driver") that permits a computer to communicate with a device.

dialog box — An on-screen window displayed by the operating system or a program giving a direction to, or requesting input from, the user.

direct current (DC) — The type of power usually supplied by batteries. DC flows in one direction. Compare *alternating current (AC)*.

direct memory access (DMA) — A dedicated channel, bypassing the CPU, that enables direct data transfer between memory and a device.

directory — See *folder*.

disable — To turn a computer option off. See also *enable*.

disc — A round, flat piece of metal, designed to be read from and written to by optical (laser) technology, and used in the production of optical discs, such as CDs and DVDs. Compare *disk*.

disk — A round, flat piece of material that can be magnetically influenced to hold information in digital form, and used in the production of magnetic disks, such as diskettes and hard disks. Compare *disc*. See also *diskette*, *hard disk*.

disk drive — The device that reads and writes information and programs on a diskette or hard disk. It rotates the disk at high speed past one or more read/write heads.

diskette — A thin, flexible disk in a protective jacket that stores magnetically encoded data. Diskettes can be removed from the computer and come in two sizes: 5.25-inch and 3.5-inch. Your computer uses 3.5-inch diskettes. See also *double-density diskette*, *high-density diskette*.

document — Any file created with an application and, if saved to disk, given a name by which it can be retrieved. See also *file*.

double-click — To press a TouchPad control button or mouse button rapidly twice. In the Windows® operating system, this refers to the left TouchPad control button or mouse button, unless otherwise stated.

double-density diskette — A 3.5-inch diskette that can hold up to 720 KB of information (half the capacity of a high-density diskette). See also *diskette*, *high-density diskette*.

download — (1) In communications, to receive a file from another computer through a modem or network. (2) To send font data from the computer to a printer. See also *upload*.

drag — To hold down a TouchPad control button or mouse button while moving the cursor to drag a selected object. In the Windows® operating system, this refers to the left TouchPad control button or mouse button, unless otherwise stated.

driver — See *device driver*.

DVD — An individual digital versatile (or video) disc. See also *DVD-ROM*.

DVD-ROM (digital versatile [or video] disc read-only memory) — A very high-capacity storage medium that uses laser optics for reading data. Each DVD-ROM can hold as much data as several CD-ROMs. Compare *CD-ROM*.

E **emulation** — A technique in which a device or program imitates another device or program.

enable — To turn on a computer option. See also *disable*.

executable file — A computer program that is ready to run. Application programs and batch files are examples of executable files. Names of executable files usually end with a .bat or .exe extension.

expansion device — A device that connects to a computer to expand its capabilities. Other names for an expansion device are port expander, port replicator, docking station, or network adapter.

extension — See *file extension*.

external device — See *device*.

F **file** — A collection of related information, saved on disk with a unique name. A file may be a program, information used by a program, or a document. See also *document*.

file allocation table (FAT) — The section of a disk that keeps track of the location of files stored on the disk.

file name — A set of characters that uniquely identifies a file within a particular folder. It consists of two parts: the actual name and the file name extension. See also *file extension*.

file extension — The three characters following the period (pronounced “dot”) at the end of a file name. The extension indicates the type of file. Examples are .exe for program files and .hlp for help files. See also *file name*.

folder — Also called directory. A container for organizing files saved to a disk. A folder is symbolized on screen by a graphical image (icon) of a file folder. A folder can contain files and other folders.

format — (verb) To prepare a blank disk for use with the computer's operating system. Formatting creates a structure on the disk so that the operating system can write information to the disk or read information from it.

frontside bus — The primary pathway (bus) between the CPU and the computer's main memory. Also called "system bus." See also *bus*.

function keys — The keys labeled F1 through F12, typically located on the keyboard. Their function is determined by the operating system and/or individual programs.

G

gigabyte (GB) — A unit of data equal to 1,073,741,824 bytes ($1024 \times 1024 \times 1024$ bytes). 1 Gigabyte (GB) means $1000 \times 1000 \times 1000 = 1,000,000,000$ bytes using powers of 10. The computer operating system, however, reports storage capacity using powers of 2 for the definition of $1 \text{ GB} = 1024 \times 1024 \times 1024 = 1,073,741,824$ bytes, and therefore may show less storage capacity. Available storage capacity will also be less if the product includes one or more preinstalled operating systems, such as Microsoft Operating System and/or preinstalled software applications, or media content. Actual formatted capacity may vary. See also *byte*.

ground — A conductor to which all components of an electric circuit are connected. It has a potential of zero (0) volts, is connected to the earth, and is the point of reference for voltages in the circuit.

H

hard disk — A storage device composed of a rigid platter or platters that can be magnetically coded with data. Hard disks hold much more information than diskettes and are used for long-term storage of programs and data. The primary (or only) hard disk in a computer is usually fixed, but some computers have secondary hard disks that are removable. By default, the primary hard disk is referred to as drive C.

hardware — The physical components of a computer system. Compare *software*.

Hibernation — A feature of many Toshiba notebook computers that saves to the hard disk the current state of your work, including all open files and programs, when you turn the computer off. When you turn on the computer again, your work is returned to the same state it was when the computer was turned off. See also *Standby*, *Suspend*.

high-density diskette — A 3.5-inch diskette that holds 1.44 MB of data. See also *diskette*.

hot key — (1) A feature in which certain keys in combination with the Fn key can set system options or control system parameters, such as the battery save mode. (2) A key or combination of keys that activates a memory resident program.

hot swapping — The ability to add or remove devices from a computer while the computer is running and have the operating system automatically recognize the change.

icon — A small image displayed on the screen that represents a function, file, or program.

interlaced — A method of refreshing a computer screen, in which only every other line of pixels is refreshed. Interlaced monitors take two passes to create a complete screen image. Compare *non-interlaced*.

internal device — See *device*.

Internet — The decentralized, world-wide network of computers that provides electronic mail, the World Wide Web, and other services. See also *World Wide Web*.

keyboard shortcut — A key or combination of keys that you use to perform a task instead of using a pointing device such as the TouchPad.

kilobyte (KB) — A unit of data equal to 1024 bytes. See also *byte*.

L1 (level one) cache — Memory cache built into the processor to help improve processing speed. See also *cache*, *CPU cache*, *L2 cache*.

L2 (level two) cache — Memory cache installed on the motherboard to help improve processing speed. It is slower than L1 cache and faster than main memory. See also *cache*, *CPU cache*, *L1 cache*.

LAN (local area network) — A group of computers or other devices dispersed over a relatively limited area and connected by a communications link that enables any device to interact with any other on the network.

liquid crystal display (LCD) — A type of display that uses a liquid substance between two transparent electrode panels. When an electric current passes through the electrodes, the molecules in the liquid form a crystalline pattern that polarizes the light passing through it. A filter over the electrodes permits only non-polarized light to pass to the surface of the display, creating light and dark pixels.

load — To move information from a storage device (such as a hard disk) into memory for processing.

local area network — See *LAN*.

logical drive — A section of a disk that is recognized by the operating system as a separate disk drive. A system's logical drives may differ from its physical drives. For example, a single hard disk drive may be partitioned into two or more logical drives.

M

megabyte (MB) — A unit of data equal to 1,048,576 bytes (1024 x 1024 bytes). See also *bytes*.

memory — Typically refers to the computer's main memory, where programs are run and data is temporarily stored and processed. Memory can be volatile and hold data temporarily, such as RAM, or it can be nonvolatile and hold data permanently, such as ROM. A computer's main memory is RAM. See *RAM*, *ROM*.

microprocessor — See *central processing unit (CPU)*.

MIDI (Musical Instrument Digital Interface) — A standard for connecting musical instruments, synthesizers, and computers. The MIDI standard provides a way of translating music into a form computers can use, and vice versa.

modem — Short for "modulator/demodulator." A device that converts information from digital to analog and back to digital, enabling information to pass back and forth between digital computers and analog telephone lines.

motherboard — The main circuit board in the computer. It contains the processor, memory, and other primary components.

MS-DOS prompt — See *system prompt*.

multimedia — A combination of two or more media, such as sound, animation, and video in a computer program or presentation.

multi-function drive — A DVD drive that can read and write to CD and DVD media.

Musical Instrument Digital Interface — See MIDI.

N **network** — A collection of computers and associated devices that are connected by communications facilities. A network allows you to share data and peripheral devices, such as printers, with other users and to exchange electronic mail.

non-interlaced — A method of refreshing a computer screen, in which each pixel of every line is refreshed as the electron beam scans across and down the screen. Compare *interlaced*.

non-system disk — A disk for storing programs and data that cannot be used to start the computer. Compare *system disk*.

O **online** — Available through the computer. Online may refer to information being read from your own computer's hard disk, such as online documentation or online help, or to information coming from another company on a company network or the Internet.

operating system — A set of programs that controls how the computer works. Examples of operating systems are the Windows® XP Home and Windows® 2000 operating systems.

P **palette** — See *color palette*.

parallel — Processes that occur simultaneously. In communications, it means the transmission of more than one bit of information at a time. On some computers, a parallel port provides a parallel communications interface between the computer and an appropriate device. Compare *serial*.

password — A unique string of characters which you enter to verify your identity to the computer or the network.

PC Card — A credit-card-sized expansion card designed to increase the capabilities of notebook computers. PC Cards provide functions such as modem, fax/modem, hard disk drive, network adapter, sound card, or SCSI adapter.

peripheral — Any device, such as a printer or joystick, that is attached to the computer and controlled by the computer's CPU.

pixel — Short for "picture element." The smallest dot that can be produced on a screen or printer.

Plug and Play — Generally, refers to the computer's ability to automatically configure itself to work with peripheral devices. When capitalized, refers to a standard that, when followed by a device manufacturer, allows a PC to configure itself automatically to work with the device.

pointing device — Any device, such as the TouchPad or a mouse, that enables you to move the cursor on the screen.

port — A socket on the computer where you plug in a cable for connection to a network or a peripheral device.

processor — See *central processing unit (CPU)*.

program — A set of instructions that can be executed by a computer. The general classes of programs (also called software) are operating system, application, and utility. See also *operating system*, *application*, *utility*.

properties — The attributes of an object or device. For example, the properties of a file include the file's type, size, and creation date.

R

RAM (random access memory) — Volatile memory that can be written to as well as read. By volatile, we mean that information in RAM is lost when you turn off your computer. This type of memory is used for your computer's main memory. See also *memory*. Compare *ROM*.

random access memory — See *RAM*.

read-only memory — See *ROM*.

reboot — See *boot*, *restart*.

removable disk — A disk that can be removed from a disk drive. A diskette is one example of a removable disk.

resolution — A measure of the sharpness of the images that can be produced by a printer or displayed on a screen. For a printer, resolution is expressed in dots per inch (dpi). For a screen, it is expressed as the number of pixels available horizontally and vertically.

restart — Synonymous with reboot. To reset the computer by reloading the operating system without turning the computer off. See also *boot*.

RJ11 — A modular connector used on most U.S. telephone systems and direct-connect modems. The RJ11 connector is a 6-wire connector.

ROM (read-only memory) — Non-volatile memory that can be read but not written to. By non-volatile, we mean that information in ROM remains whether or not the computer is receiving power. This type of memory is used to store your computer's BIOS, which is essential instructions the computer reads when you start it up. See also *BIOS*, *memory*. Compare *RAM*.

S

select — To highlight or otherwise specify text, data, or graphics with the intent to perform some operation on it.

serial — Processes that occur one at a time. In communications, it means the transmission of one bit at a time sequentially over a single channel. Most computers have a serial port, which provides a serial interface between the computer and a single device, and/or a USB port which provides a high-speed connection to multiple devices. See *Universal Serial Bus (USB)*. Compare *parallel*.

shortcut — See *keyboard shortcut*.

software — See *program*. Compare *hardware*.

Standby — A feature of some Windows® operating systems that allows you to turn off the computer without exiting your open applications and to continue from where you left off when you turn the computer on again.

Suspend — A feature of some Windows® operating systems that allows you to turn off the computer without exiting your open applications and to continue from where you left off when you turn the computer on again.

system disk — A diskette that contains the operating system files needed to start the computer. Any diskette can be formatted as a system disk. A system disk is also called a “bootable disk” or a “startup disk.” Compare *non-system disk*.

system prompt — The symbol (in the MS-DOS® operating system, generally a drive letter followed by a “greater than” sign) indicating where you enter commands.

T U

TFT display — See *active-matrix display*.

universal serial bus (USB) — USB is a serial bus that supports a data transfer rate of up to 480 Mbps (480 million bits per second). USB can connect up to 127 peripheral devices through a single all-purpose USB port. USB allows hot swapping of peripherals. See also *bus*, *hot swapping*, *serial*.

upload — To send a file to another computer through a modem or network. See also *download*.

USB — See *universal serial bus (USB)*.

utility — A computer program designed to perform a narrowly focused operation or solve a specific problem. Utilities are often related to computer system management.

W

Web — See *World Wide Web*.

Wi-Fi — A trademarked term by the Wireless Capability Ethernet Alliance which stands for Wireless Fidelity, and is another term for the communication protocol to permit an Ethernet connection using wireless communication components.

World Wide Web (www) — The worldwide network of Web sites linked together over the Internet. A user of the Web can jump from site to site regardless of the location of the computer hosting the site. See also *Internet*.
